Tomorrow, Friday May 13th, the Tonight Show with Jay Leno will feature a message sending/receiving contest between a cell phone text messaging team and a morse code team. The morse code team will consist of Chip Margelli, K7JA and Ken Miller, K6CTW. The Tonight Show people called the store yesterday to see if we could come up with two fast morse operators. Chip and Ken do a lot of contests and DXpeditions. Joe Drago, props manager for the show is KF6OCP.

This should result in some excellent PR for ham radio.

1315. Sign Up for Fourth of July Parade

Yahoo group: Temple_ARC
Date: 2005-05-13 03:07:38 UTC
From: darwindoa
Topic: 1315 Message: 1315

Once again the TARC will be handling communications associated with the July 4th Parade in Belton. The Parade will be on Monday July 4 and will officially start about 10 AM. If it is like last year, we will probably meet about 8 AM and work until about noon. This will involve standing around in the Texas sun for a few hours.

I realize it is rather early, but they want to be sure to order enough volunteer tee shirts. So if you think there is a possibility you might participate, let me know and I will add you to the list. You can change your mind later if you need to, so err on the side of "maybe".

I need to know your tee shirt size also (S,M,L,XL,XXL etc). This somewhat personal information is needed to get the right sizes of shirts.

If you are a new ham and don't yet have hand held gear, don't let that hold you back. We can pair you up with someone or find a loaner or something.

If you signed up at the club meeting, I already have you and there is no need to respond to this.

Respond directly to k5doa@... off the reflector to keep from clutting up the reflector.

If you missed seeing the Jay Leno Show and you are on a DSL or cable internet connection, you can see or download a Windows Media Video clip here:

http://www.tarc.org/index.php?load=leno

You will need to have the Windows Media Player installed on your computer to see this clip.

Subject: Hello from 9k2 land de w5ssg

Hello Mike,
Well I hope this finds the club doing well, I'm doing just fine over in Kuwait my Kuwaiti call is 9k2/w5ssg I get on the air about once a day. On Tuesdays I go to club house of 9k2ra and use the big radio they have and talk back to the USA then. It all ways help to have 1500 watts and 7 element 20m monobander.

While using the club radio I must use the club callsign, so if the guys in the area hear 9k2ra it might be me on tuesday. The time difference is 8 hours and it's about 8:30pm here when I get on the radio. Well it's nice here the Gov't sponors the club radio station so they have the best equipment Ft-1000mp MK5. Well please post this to the club e-mail and post it in the club newsletter.

Have any of the club member that need to work Kuwait for DXCC can contact me to setup a schedule on Tuesday.

Hello!
Hope this email is finding you all doing well and having a wonderful week.

We would like to let everyone know that the W5TSG Traffic and Training Net will be on the 147.140, + 123.0 tone, on May 25, 2005 beginning at 7:30 p.m. This net will be the W5TSG Memorial Day Tribute Net. We are asking for all area HAMS who have served in any branch of the Military, to please email Rene' Miller / KD5NEV at kd5nev_rmm@... or kd5nev@... with the following information: 1) What branch of service you served in, 2) any wars fought in, 3) any awards, honors, etc received while serving in the Military. We will compile this information and recognize these HEROS on this special net. We will also take check-ins if you are unable to get this information to us and recognize you on the net. In addition, for those who would like to honor a family member or friend who served our country, you will have the opportunity to do so on the net. This net will be a special net for us to say THANK YOU for those who have defended our beautiful country and freedom!

Please join us on May 25, 2005 at 7:30 p.m. for this Special Memorial Day Tribute Net.

Thank you and 73's for now my friends!

1327. Bike Ride this Saturday

Yahoo group: Temple_ARC
Date: 2005-05-25 14:59:05 UTC
From: darwindoa
Topic: 1327 Message: 1327

We could still use some help for the Tour de Temple bike ride this Saturday if you are interested. It will last from 8AM until about noon. Operations will be on the W5LM repeater. Vehicle mobiles will be
most valuable at the western edges of the route to Mother Neff park, although handhelds will probably be OK at the checkpoints north of the
airport. If you are a new ham and don't yet have a mobile, we can pair
you with someone who does.

Vernon W5WDW is cordinating the volunteers. If you are not on the list
below and would like to help, send a note to Vern at w5wdw@...
.

Names we have thus far are:

Eddie Huntsman
Ron Thompson
Bill Esconlante
Myron Mesecke
Tom Olson
Darwin Geiselbrecht
Vernon Starnes

Thanks 73 - Darwin K5DOA

1329. BPL What is currently happening with the BPL bills

Yahoo group: Temple_ARC
Date: 2005-05-28 00:45:36 UTC
From: G
Topic: 1329 Message: 1329

Get this to every ham in Texas.. Spread the word!!!!

CONTACT EVERY ONE OF THESE LEGISLATORS ON THIS BPL BILL.
WE ARE BEING HEARD AND VERY LOUDLY NOW AND THEY KNOW IT!!!

Comments on the new Texas BPL Bill
by Tom Blackwell, N5GAR

The death of SB 1748: With so many citizens contacting Legislators in opposition to SB 1748, it was placed at the end of the Major State Calendar in the House. Consequently, there was not enough time before the Midnight deadline for it to be considered. If it had been, floor amendments intended to protect the interests of amateurs were ready. SB 1748 is dead.

Senator Troy Fraser (R-Horseshoe Bay) and the BPL lobbyists anticipated this. They found a way to proceed on the floor of the Senate to amend it to HB 789. This has now passed in the Senate, and is before the House. Senators who ignored opposition from the public before ignored their records of this opposition once again. In an unusual "Musical Chairs" exercise, this is the third bill to contain Senator Fraser's Pro-BPL language during this Legislative Session (SB 1748, SB 408, HB 789).

Conference Committee: On May 26 the House provided notice that it refused to accept the Senate amendments. A Conference Committee of House and Senate members will be appointed to work out these differences. Bill Lawless, W5WRL, and I provided input to the Speaker on these appointments. He has now appointed these members: Phil King, Chairman, Baxter, Crabb, Cook and Hartnett. The Lt. Governor has not yet appointed the Senate members. Those wishing to contact these members should use these links:

Chair: Phil King (R), Weatherford. (512) 463-0738.
http://www.house.state.tx.us/members/dist61/king.htm

Rep. Todd Baxter (R), Austin. (512) 463-0631.
http://www.house.state.tx.us/members/dist48/baxter.htm

Rep. Robby Cook (D), Eagle Lake. (512) 463-0682.
http://www.house.state.tx.us/members/dist17/cook.htm

Rep. Joe Crabb (R), Kingwood. (512) 463-0520.
http://www.house.state.tx.us/members/dist127/crabb.htm

Rep. Will Hartnett (R), Dallas. (512) 463-0576.
http://www.house.state.tx.us/members/dist114/hartnett.htm

Those wishing to comment on the Lt. Governor's appointees to the Conference Committee on HB 789 should contact Shelly Botkin, his Senior Policy Analyst. 512-463-6054. She should know that we are requesting the assistance of his office for representation on the issue of BPL interference, and remind her that Lt. Gov. Dewhurst campaigned for this office and asked for our votes at the Arlington Hamcom - an ARRL affiliated Amateur Radio Convention.

Lt. Gov. David Dewhurst (R), Houston. Dewhurst previously helped pass Senator Fraser's SB 1748.
http://www.senate.state.tx.us/75r/LtGov/Ltgov.htm

At this time those with concerns about BPL should also contact the House member of choice, as well as the Governor's office.

The Governor's office has a toll free "hotline" - - See below. The Governor should know about all the controversies involving the new BPL provisions on HB 789. This bill is titled "Relating to furthering competition in the telecommunications industry."

Here is the Internet link for the status of HB 789:
http://www.capitol.state.tx.us/cgi-bin/db2www/tlo/billhist/actions.d2w/report?LEG=79&SESS=R&CHAMBER=H&BILLTYPE=B&BILLSUFFIX=00789&SORT=DESC

Here is the Internet link for Senator Fraser's press release, in support of HB 789:
http://www.fraser.senate.state.tx.us/pr05/p052405a.htm

Those of us with investments in Amateur Radio have come to learn about elected public officials who support us, and about elected public officials who do not.

As a result of the conduct of the BPL lobbyists and certain elected public officials, it appears FCC licensed amateurs will have to become even more committed to documenting complaints about interference from BPL systems to the FCC. We expect those complaints will be similar to the Irving complaint, which asks for relief and sanctions (see the link below). These will not be frivolous complaints. They will be well researched and documented. With the addition of ASM Bill Byrom, N5BB, the ARRL North Texas Section has substantially improved its ability to address BPL and other interference issues.

1330. [ARD9800] Good Net Saturday - Digital Voice is Alive.

Yahoo group: Temple_ARC
Date: 2005-05-29 01:04:05 UTC
From: Steve Bosshard (NU5D)
Topic: 1330 Message: 1330

Contacts using the AOR, ARD9800 Digital Voice Unit.

From: ARD9800@yahoogroups.com [mailto:ARD9800@yahoogroups.com] On Behalf Of Mel Whitten
Sent: Saturday, May 28, 2005 4:27 PM
To: ARD9800@yahoogroups.com
Subject: [ARD9800] Good Net Saturday

Good signals and DV was heard on the net today from:

K4RTN - Jack in hot and humid Florida

AA1UE - Gary in Springfield Mass (using low power and low dipole) Gary is using the new ARD9000.

W6VX - Rich near LA with his new ARD9000 (audio sounded better today!)

AD5RN - John using his dad's ARD9800 (Steve). We miss Steve but very glad to have John join us today with a whopping big signal from Temple Texas

KQ6EH/6 mobile - Paul broken in on SSB - Paul was a bit weak for DV but great to hear his voice on SSB.

Jack, K4RTN also reported working two other stations before the net today (I believe they were KD6FSC? and K9SN?). Maybe they can join us tomorrow.

I had a long QSO earlier this week with LI9DFA, Morten on 14.236. Morten a is friend of Tom, LA4LN. Morten said he would be talking with Tom and let him know about our nets. My last DV QSO with Tom was solid for 15 minutes, so I hope he can get back on 236 with us again.

We missed hearing many of the "regulars" on the net today. I suppose with the the holiday and good weather (I hope in your area!), many are fnding other activities in the great outdoors!

Look for you all tomorrow, 14.236 Sunday at 20:00 UTC

For those using the ARD9000, a substitute speaker/mic from Kenwood's "HIT" line of mics may be used (same plugs/wiring). These include the Kenwood model SM32, SM33, or SM34. Please provide us report if you have tried one of these mics on your ARD9000.

I'll be posting a new software release for the ARD9800 with info and instructions. Look for it later at Paul's website www.rfelectronics.com

Mel, K0PFX

1331. Posts are unmoderated so think twice before you post in haste

Yahoo group: Temple_ARC
Date: 2005-05-29 18:59:06 UTC
From: john_ke5c
Topic: 1331 Message: 1331

Please note the following changes to this group. Hopefully common sense will prevail. Please be considerate to fellow list members and avoid repetitive posts. All ARRL members - virtually all of us - receive ARRL bulletins so those don't need to be reposted here unless you are commenting on a specific item - in which case please quote that item and not the entire bulletin. Thank you and Happy Memorial Day!

The purpose of the Temple Amateur Radio Club discussion group and e-mail reflector is to provide communication and foster positive, constructive discussion between ham radio operators living in or having ties to Temple, Bell County, the surrounding areas of Texas. You must be a group member to post. Posts are unmoderated so think twice before you post in haste. If two TARC Board Members concur, you will be banned for 1) personal attacks, 2) vulgar language, 3) sexually explicit language - including "jokes", 4) commercial for-sale posts, and 5) any other post clearly contrary to spirit of amateur radio.

Austin SwapNet 05/29/05 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Hams in Memoriam,
Lori and I hope you all had a great Memorial Day Weekend. We did some
home
improvement projects, replacing some aging ceiling fans and prepping for
HamCom.
We hope to see you at HamCom, look for the orange diver's flag!

Update on Austin Radio RoundUp venue- Roger W5WIA and I had a very nice
meeting
with Hillard from the VFW Post 8787, between Braker & Yager Ln in Austin.
http://maps.yahoo.com/maps_result?addr=500+VFW+rd&csz=Austin%2C+tx&country=us&new=1&name=&
qty=
The hall is large enough for a decent Swapfest (large is 66'x80', small is
33'x80'), has
area for outdoor tailgating and plenty of parking. They also have cheap
($5/day) RV
hookups. The Post has a "Steak Nite" every month or so 6-8:30 on Friday,
which benefits
the Ladies Auxiliary. If this all falls together, we will have a Friday
night setup,
dinner and party, along with a terrific Saturday event.
I am scheduled to speak (briefly) at the VFW June 6 Board meeting to
finalize the
arrangements and begin what we hope to be a long-term friendship!

If you are VFW-eligible, please consider joining your local Post (or 8787)
and put in a
good word for Amateur Radio!

An NCS stand-in for the June 5 SwapNet is needed, while Lori and I are
attending
Ham-Com. I will provide words of (relative) wisdom, preamble and Excel or
text file
to read the listings and make updates. Give it a try! N5MNW@... or
255-6753

1335. Icom Invite to HamExpo

Yahoo group: Temple_ARC
Date: 2005-05-31 21:13:56 UTC
From: Steve
Topic: 1335 Message: 1335

Just a thought, but if any of the TARC members will be attending hamcom, it might be a good time to personally invite Icom to set-up at HamExpo. I saw Alinco down there last time and it was nice seeing one of the major radio companies set-up. HamExpo has really gotten bigger since the first time I went back in 2001.

73, perhaps I will run into some of you this weekend at hamcom.

1336. Fw: Ham gear for sale

Yahoo group: Temple_ARC
Date: 2005-06-01 23:22:18 UTC
From: john, ke5c
Topic: 1336 Message: 1336

Don explains "I belonged to the Temple Ham group a couple of years ago but was not real active and have been totally inactive for the last two years. Last fall I took down My last antenna and now entertain myself with other things."

----- Original Message -----
From: <dsmith51@...>

1340. FD - Field Day news

Yahoo group: Temple_ARC
Date: 2005-06-03 13:39:44 UTC
From: john, ke5c
Topic: 1340 Message: 1340

please prefix the subject of your field day related posts by "FD" if possible. that way we can quickly scan for those messages.

the field day link is up on the website www.tarc.org. this page will be frequently updated with new information. please send me any updates you wish posted, or post them here and i will add them to the web page. see the map and the link to the easy-to-learn field day logging program we used last year and will reuse this year. please download it and try it out - it will let you save about 30 contacts for this purpose.

i have a 25G side mount i forgot about. for the phone station, i hope we can erect two small tribanders, one fixed ne and the other fixed nw instead of using a rotator. we could mount one on a mast, then push that mast up a bit and the other on the temporary tower near the top. that way we might get away with just three sections instead of four tower sections.

i busted the roster page. it should be fixed by this evening. too many keystrokes too rapidly.

73, john

1341. wa5aje info?

Yahoo group: Temple_ARC
Date: 2005-06-05 05:54:20 UTC
From: John Dvoracek
Topic: 1341 Message: 1341

during a ragchew tonite, dave, wa0sap, from nixa,mo asked if i knew wa5aje. dave said this fellow had been his elmer many years ago, had lost touch, and when he tried to track him down, got nowhere. i'm not familiar with him or what may have happened, so does anyone know? is he a sk? let me know, and i'll pass it along to

1344. Balun Testing - How?

Yahoo group: Temple_ARC
Date: 2005-06-06 14:01:42 UTC
From: sgtdavis
Topic: 1344 Message: 1344

I just a bought used Cushcraft 13B2 13 Element Yagi 2 meter broadband and I want to check the Balun(they call it an UltraMatch). My friend Rudy KD5U across town can hardly hear me on SSB. What's the best way to test the Balun?? I think it is bad as the Antenna looks almost new.
I have it down in the yard.

Well Folks,

It is just a little over 2 weeks till field day, the ARRL annual emergency preparedness contest. So far there have been very few volunteers.

Here are a few jobs that need attention.

Press Release and contact public officials.

Soft Drinks and Brisket

Site preparations - mowing, table setup, and cleanup.

Transport supplies from our miniature storage space to the showgrounds.

Operators, 1 on the radio, the second on the logging computer goal 50 contacts per hour CW, Fone and GOTA.

Here is you chance to operate W5T and W5LM.

Station and antenna setup.

Thus far Icom is working on my Pro II (blown rf attenuators) and may or may not have it back in time.

I did receive a Hygain trapped dipole today - 10-75M and have a 6M yagi - un-assembled.

The big generator is fueled and ready - will get oil change after FD - starts like a Honda (thanks Barbara Kay).

Floyd will copy ARRL FD Bulletin.

We need PSK / Digital and SSTV Activities.

Tower preparation, and assembly

After all is said and done, disassemble antennas, tower, stations, etc and return them to storage.

Consume remaining BBQ and any adult beverages that may have escaped prior scrutiny.

PLEASE VOLUNTEER AND MAKE THIS A SUCCESS FOR OUR CLUB.

USE "REPLY ALL' OR ELSE ONLY I WILL SEE YOUR REPLIES.

And as Bartles and James would say "Thanks for your support."

Steve

PS - Fun and Levity is ENCOURAGED..

Everyone's Welcome
TSGARC Dinner and Program
Monday, June 13, 2005
DINNER: 6:00 p.m. - "Sandwich Supper" Desserts and Ice Tea.

RAFFLE: Four Ryan's Family Steakhouse Gift Certificates, each $10.50 value. Tickets $1 each or 6 for $5. Also free door prize for 1 medium pizza at Pizza Inn on Valley Mills Drive in Waco.

PROGRAM: 7:00 p.m. - "Young Hams" night. Steve Anness kd5owo, Grant Gilliam Ke5erw and Josh Harris Kd5jrz will be the guest speakers and give a short summary of why they chose the field of amateur radio, their studying techniques to become a licensed ham radio operator and the modes of ham radio they're interested in plus general ham radio related information.

The TSGARC clubhouse is located at 3292 Speegleville Road, half-way between Hwy 6 and Hwy 84, Waco.

Charlie, N5TD, along with help from Tom, KG5II, will work
together
to provide 'demonstration modes' at the TARC Field Day, 2005.

They are not sure at this time, whether a satellite contact
attempt
will be practical or not. That may be decided during the next
two
weeks.

73,
Kay Schlieper

Topic: 1349 Message: 1353

for natural power, we need a qrp rig to make 5 qso's, maybe ron's index labs? i have a big solar panel which, in sunlight, puts out 2.7 amps at 14 volts. my orion consumes 2 amps because of all the digital stuff, so it's not a good option.

let's also try to have a 50 mhz station. we only need to cover that during daylight and evening when we might catch some e-skip. we don't need a potent antenna since we're looking for e-skip.

> Site preparations - mowing, table setup, and cleanup.

i can help any day the week before after about 5 pm. looks like i have to work that friday, but then i'm available the rest of the weekend.

> Operators, 1 on the radio, the second on the logging computer goal 50 contacts per hour CW, Fone and GOTA.

i'll be available virtually all of the contest period.

> Thus far Icom is working on my Pro II (blown rf attenuators) and may or may not have it back in time.

can anyone else bring a pro II - we have cables, a foot switch, and a headset wired for the pro II???

> Floyd will copy ARRL FD Bulletin.

and we'll originate 10 messages to family members or something that he'll receive as official traffic.

> We need PSK / Digital and SSTV Activities.

n5td says through barbara kay that he's got this covered.

> Consume remaining BBQ and any adult beverages that may have escaped prior scrutiny.

got that covered.

73, john

1360. FD - BBQ

Yahoo group: Temple_ARC
Date: 2005-06-15 20:04:47 UTC
From: Steve S. Bosshard
Topic: 1360 Message: 1360

AD5PB has offered to not only serve, but prepare and slice brisket and sausage from Best Quality Meats for FD (cooked by AD5PB). This will be a special treat for everyone - Plan is for this to be an evening meal Saturday. I will get a pot of brown beans going (John D will this help with the Natural Power aspect)?

So far I have a Five Band trapped dipole from Hy-Gain assembled and hopefully ready for battle, and the generator is in Temple ready for action. It starts on the first pull.

I hope Ron T can bring his Pro II for the FONE station - John D has a dual headset and switch box wired for the Pro II and mine is still at ICOM waiting for parts.

Charlie and Tom V are working to put together the digital/sstv Special Modes station, and Mike is working on the press release.

Thanks for all that you do.

Best 73,

Steve

A BIG THANK YOU TO MYRON, N5TFK, for mowing and making ready the area around the Miller Pavillion.

1 Explorer 14, HyGain HF yagi and 1 5Band Dipole are on site as well as the tower, and a small hole in the ground for setting a below grade stub section. Will need to drill out some pop rivets holding an anti climb shield on the bottom section. Ssb

1367. FD: long range weather forecast

Yahoo group: Temple_ARC
Date: 2005-06-20 00:55:47 UTC
From: John (KE5C)
Topic: 1367 Message: 1367

from the national weather service:

Wednesday: Mostly sunny, with a high around 97. South southwest wind around 5 mph.

Wednesday Night: Mostly clear, with a low near 71. South southwest wind between 5 and 10 mph.

Thursday: Partly cloudy, with a high near 97. Southwest wind between 5 and 10 mph.

Thursday Night: Partly cloudy, with a low around 72. South southwest wind around 10 mph.

Friday: Partly cloudy, with a high around 96.

Friday Night: Partly cloudy, with a low around 72.

Saturday: Partly cloudy, with a high around 93.

Saturday Night: Partly cloudy, with a low near 73.

Sunday: Mostly cloudy, with a high around 93.

looks like we have a great chance for dry weather this year. plus, partly cloudy will keep the high temps a bit more manageable - cul, john

1369. FD: thinking out loud

Yahoo group: Temple_ARC
Date: 2005-06-20 05:05:19 UTC
From: John (KE5C)
Topic: 1369 Message: 1369

we should focus our setup for ssb hf. i think two fixed tribanders ne and nw are the way to go. if we start rotating, we lose time and qso's. i looked at the side mount, and i don't think we can mount two antennas on it, epecially 90 degrees apart, so one will have to go on the mast or on the mast sleeve if we use a top section with a sleeve instead of a thrust bearing. i don't know what to do about the 6 meter beam, but i don't want to compromise the hf setup to have it rotatable and to be competing and/or interfering with the hf ssb station.

the cw station needs the second best antenna, then the gota station has to be third in priority. does the club vertical cover 80 or just down to 40 as i suspect?

antennas:
1) two tribanders fixed, one ne, one nw
2) club vertical 10-40
3) john's vertical 40/80
4) steve's multi-band dipole - if we could strap a mounting pole to the roof center riser, we could set this up as a pretty high inverted vee
5) darwin's 80 dipole?

daytime is easy:
ssb - two tribanders
cw - club vertical
gota - multi-band dipole

night time could be more complicated:
ssb - club vertical for 40, darwin's 80 dipole
cw - john's vertical for 40/80
gota - maybe just stay on the multiband dipole

maybe we can do the five natural power qso's on the gota station using ron's index labs qrp rig and the solar panel - i hope we have some sun!

we need to call cq, not search for folks to answer. even when no one answers, call cq.

radios:
1) ron or steve's pro2 on ssb - we need a pro2 since the headsets and ptt footswitch are wired for a pro2, plus we need the pro2's voice keyer (let's figure out how to work it this year ahead of time...)
2) john's orion on cw
3) ron's pro2 or steve's ts2000 or club 870 on gota
4) steve's ts2000 on 6 or does the club have a vhf all mode rig?
5) charlie's vhf/uhf setup for other modes

cq field day!

1371. Re: [Temple_ARC] FD: thinking out loud

Yahoo group: Temple_ARC
Date: 2005-06-20 17:21:49 UTC
From: Charlie Schlieper
Topic: 1369 Message: 1371

Sounds like a good plan John.
The club's R-7000 Vertical antenna only goes down to 40m.

I would like to setup the "Demonstration Mode" setup about where it was last year.
Plan to come out Friday around noon to help clean, setup tables, and help out with
other things that need to be done.

Since we can officially begin our setup Friday at 1PM, or 1800 UTC, I may try to
get my antennas up on a heavy duty pushup pole, mounted about where it was last
year. I may wait until Saturday morning to complete my equipment setup.

Charlie, N5TD

1372. FD: 20, 40, & 80 meter event

Yahoo group: Temple_ARC
Date: 2005-06-20 15:33:24 UTC
From: john, ke5c
Topic: 1372 Message: 1372

http://www.arrl.org/qst/propcharts/2005/06/mid.pdf

http://www.arrl.org/qst/propcharts/2005/07/mid.pdf

Looking at the propagation forecasts for June and July 2005, Field Day will be a 20, 40 and 80 meter event, so those bands will be crowded. 20 will be open during the daylight hours, but 15 and 10 are not forecast to be open at all - and they sure have not been the past two weekends. Perhaps we can work some Texas - Oklahama - Arkansas stations on ground wave, and those will be the 3 and higher class entrants who have that second SSB transmitter and need to put it somewhere during the daytime. Those stations can be found and worked by making a sweep of the band, but calling CQ on those bands won't be nearly as productive as calling CQ on 20, 40, and 80. When you can't figure out what do, call CQ on 20, 40, or 80. Try to hold your frequency by making a lot of noise (CQ). If we get both hf tribanders up and fixed ne and nw, we will parallel them most of the time and let the antenna tuner worry about the impedance. Spreading the power across the U.S. will give us the best chance of holding a frequency on 20.

CQ Field Day, John

1374. Digital Signal Processing - NOT HAM RADIO,

Yahoo group: Temple_ARC
Date: 2005-06-21 21:23:46 UTC
From: Steve Bosshard (NU5D)
Topic: 1374 Message: 1374
Attachments: 2 described; binary payloads are missing from this source WARC

NOT HAM RADIO, but an eresting application of DSP Technology, similar electronics to that used to remove heterodynes and filter signals also can save digits.

From the Armadillo Reflector:

FINGER SAVER
A showstopping way to demonstrate the incredible speed of today's DSPs was a "finger-saving" tablesaw from SawStop. It takes advantage of the fact that fingers have a much greater electrical capacitance than wood. If the DSP receives a signal, it triggers a powerful spring to brake the saw blade. Spinning at 4000 rpm, the blade stops so quickly-within 5 ms-that it advances only a couple more teeth, turning what could have been a severed finger into a small cut.

A handheld hot dog stood in for the finger during the demo, the hot dog serving as an extension of human capacitance. Stop-action video replay captured the near-instantaneous saw-response time. The brake cartridge that contains the DSP is disposable (helping drive those DSP sales figures!). Thus far, five DSPs have "given their lives" to save fingertips. SawStop even got a recent thankful testimonial from a high school shop student who kept his thumb thanks to the technology. (Go to www.elecdesign.com and see Drill Deeper 10491 to view the hot dog demo.)

For demo:

http://www.sawstop.com/

Stop action videos are located at:

http://www.sawstop.com/how-it-works-videos.htm

1376. FD Update

Yahoo group: Temple_ARC
Date: 2005-06-22 12:37:19 UTC
From: Steve Bosshard (NU5D)
Topic: 1376 Message: 1376
Attachments: 2 described; binary payloads are missing from this source WARC

Hello Folks

We start setup at the TEDTEA grounds Friday after lunch. The gate key is on top of the right hand gate post. The pavilion needs some clean up and tables need setting up. Jim Coleman will bring fixings for iced tea. John Biles is handling the BBQ, sauce and Bread. I will have a pot of brown beans and Tom Olsen is bringing a side dish as well.

Some soft drinks and ice would be good to have. We have a refrigerator with freezer compartment available. Also we need some coffee - we have a percolator and cups.

Bring brooms and cleaning cloths and detergent - we will have a sink and water there.

We hope to be pretty much set up by the end of the day Friday. The contest starts Saturday at 1P (Darwin, correct me if I am wrong) and will run 24 hours. John D has the logging software and some runs of coax.

Plan is for 2 fixed Explorer 14 HF triband yagi's on the tower, and a rotator and 6M yagi on top the tower. The 10-40 Vertical will either attach to an antique corn picker, or on the peak of the metal roof on the pavilion. There is also a multiband dipole that can go on the utility pole behind the BBQ pits or on a temporary mount. The Bermuda grass in nice and trimmed around the pavilion (Thanks Myron) - bring mosquito repellant, and remember, a little clorox in your bath water will make red bugs either leave, or really dig in.

Anyhow that is the rough plan for now.

CU Friday afternoon and thank for all of your help participation and enthusiasm. This year will be another TARC success.

73,

Steve

NU5D

Yahoo group: Temple_ARC
Date: 2005-06-23 10:23:31 UTC
From: Tommie Taylor
Topic: 1380 Message: 1380

The Central Texas Storm Spotters Group Repeater Emergency Warning System is now in operation. The severe weather warning system will announce any Weather warning Messages from the National Weather Service.

This warning is a automated warning and will be updated when the warnings have changed.

The, announcements will be announced,every 15 minutes when warnings have been issued and will continue until the warnings have been deleted. You may, at anytime, check the warnings by using your DTMF microphone by pressing 911

I hope you, will enjoy this new enhancement to our weather repeater system.

I want to recognize, N5TFK Myron, N5TD Charlie, KB5DC Kay, K5DOA Darwin, KC5KXS Tom, W5WRE Ron, KD5OGL Kenneth, KD5KKH Bill, K5ALB Aubry, N5MPE Garrett, N5DJJ Jim,N5NIR Paul, KE5C John, KE5ETV Jim, and Ken Owens for being there during the Friday afternoon setup. There are many other hams working behind the scenes, preparing food (AD5PD and KC5KXS), press releases (WA5EQQ) , and the like. Every member's contribution is important to the success of this project. I am sure there will be many more TARC members doing last minute get ready work tomorrow and through out the contest. This is just a sincere THANK YOU for your participation and I am very proud of each and every one of you. Remember - a little Clorox in your bath will help with redbugs and the night shift might think about some deep woods off.

Please accept my apologies if I forgot to mention anyone who was out there in the heat this afternoon and give me 10 lashes with a wet noodle.

Thanks again,

CQ FD

Steve NU5D

PS - There will be a bunch of barbeque and a big pot of beans and a mess of cole slaw. Whether you operate, participate or just want to see what is going on, YOU ARE INVITED and WELCOME to enjoy a meal and socialize. BE OUR GUESTS. There is a map at www.tarc.org <http://www.tarc.org/> and most likely someone monitoring 146.820 tone 123.0. Listen for W5LM or out GOTA Station W5T operated by Ron Thompson. Charlie and KG5II will work with the demonstration station and compete for a satellite contact. John, Darwin and maybe Roland and Floyd will work CW and several others will operate PHONE and GOTA (Get on the Air) stations. ssb

1389. Fw: W5LM Field Day Report to the ARRL

Yahoo group: Temple_ARC
Date: 2005-06-27 23:20:56 UTC
From: John (KE5C)
Topic: 1389 Message: 1389

I will double check everything again, but I think this is correct. Last year we scored 6160, and this year we claim 6408. Conditions were not nearly as good this year, so all in all, a definite improvement. A formal debrief report will follow, but I feel very good about the turnout and participation. I think we could have used our antennas more efficiently. We need more antenna separation physically, especially for the GOTA station. We also should have had the cw station on the tribanders for more of the event than 40 minutes, but more to follow later. 73, John

1390. Final FD report W5LM 2005

Yahoo group: Temple_ARC
Date: 2005-06-28 17:31:15 UTC
From: John (KE5C)
Topic: 1390 Message: 1390

Our Field Day Chairman and President may offer comments later, but here is the final report and a comparison to last year. The easiest way for me to present this was using Excel to format a spreadsheet, then print that in a pdf format and upload it to the website. So here is that, and you should be able to print it on your printer to look at:

http://www.tarc.org/fd05/fd.pdf

Conditions were clearly worse this year, but CW held essentially the same QSO's for at least three reasons. First, Darwin and I were much more familiar with the logging program which also sends the messages in the CW mode, so there is more to it than just entering callsigns and reports. Second, N5DUW showed up unannounced a bit before midnight and ran CW most of the time until Darwin and Floyd reappeared about 6 AM., so we had fresher operators all the way around. Finally, even though 80 was noisy, Darwin's 80 meter dipole was a killer on that band. If we could hear them, we could work them in one or two tries.

On the phone side, the total QSO's were also nearly the same with a shift of a few hundred from the GOTA station to the PHONE station. I think this largely represents band conditions and reflects the better antennas of the PHONE station. With poor conditions, having the two tribanders to switch electronically instead of having to rotate one gave the PHONE station a real performance edge over the GOTA mulitband dipole and/or vertical. I had the opportunity during the last 40 minutes to appreciate the PHONE antenna setup when we moved those antennas to the CW station. For the entire contest, our average CW QSO rate was 28 per hour. For the lost 40 minutes using the two tribanders, the rate was 80 per hour! Also, as with the CW station, this is the second year using the same logging software, so the operators were also more comfortable using it, and they had also had experience with the same model of radio last year, so that helped too.

Anyway, these are my personal observations which are worth what you just paid to read them. Thanks again and congratulations to all who participated!

73, John

1392. FD - Thanks to all for the super effort

Yahoo group: Temple_ARC
Date: 2005-06-29 20:44:12 UTC
From: K5DOA@aol.com
Topic: 1392 Message: 1392

Well things have quieted down around the farm after Louie the cow dog got bit by a big rattler. He is doing fine at the vet but he is seriously rethinking his relationship to snakes.

Now that things are on a level keel, let me take this opportunity to thank everyone who made this a super field day. We had a big turnout and I won't even begin to single out folks for fear of leaving out some key contributors. Let me just say that the setup and takedown, food, operators, special technology station, GOTA, SSB, CW and all other aspects of the event were the result of a lot of hard work by a lot of folks. And we did really well in spite of lousy band conditions.

I will single out our field day chairman for special recognition. In addition to all his hard work on all aspects of the event, he managed to keep his cool while hanging on the tower in the hot sun while I repeatedly sent up the wrong hardware. Thanks for a super event Steve.

We can all be proud of TARC's results this field day. Well done! - 73 - Darwin

Promote Ham Radio

1399. WSJT Version 4.9.8 Released

Yahoo group: Temple_ARC
Date: 2005-07-01 19:00:40 UTC
From: Charlie Schlieper
Topic: 1399 Message: 1399

Ham Radio software UPDATE:
WSJT Version 4.9.8 is latest 2005 METEOR SCATTER.

(Information provided from Joe Taylor, K1JT:)
> WSJT is a computer program for weak signal VHF/UHF communications, using state of the art digital techniques. It can decode fraction-of-a-second signals reflected from meteor trails, as well as steady signals more than 10 dB weaker than those required for conventional CW. WSJT is freely available to radio amateurs for non-commercial purposes.

> To use the program you will need a computer equipped with a sound card and running the Microsoft Windows operating system. (And of course, a computer sound-card to radio interface)

> This program is able to run simultaneously with the latest version of Spectran (by I2PHD and IK2CZL), which is included with the 4.7.0 distribution. This combination of programs provides an excellent real-time spectral display in addition to all the features of WSJT.

MY COMMENTS: If you currently have WSJT 4.7.0 or later, then download just the WSJT update file <UPD498.EXE>. Otherwise, dowload the full version of WSJT 4.7.0 and install it first before you use the 4.9.8 update.

Several minor bugs were corrected in 4.9.8, and the full details are available on the WSJT homepage, as given below.

DOWNLOAD at: http://pulsar.princeton.edu/~joe/K1JT/

Enjoy Ham Radio!

1400. July 4 Parade Info

Yahoo group: Temple_ARC
Date: 2005-07-02 01:11:51 UTC
From: K5DOA@aol.com
Topic: 1400 Message: 1400

Things will be a little different at the parade this year, mostly caused by road closures around the campus. Becky will have the details when we meet.

We need to show up between 7AM and 7:30 on the 4th. We need to be there at that time because the streets will be closed by 8:30. So we need to get our instructions and out to our positions by about 8 or so. Golf carts will be limited or absent so we will need to carefully chose our positions based on the maps that Becky provides.

Unlike last year, the meeting site will be the parking lot on the corner of 9th and Shine in the UMHB campus. You can get there by turning west on to 9th from 317 into the campus. It is about 4 or 5 blocks west of 317. The parking lot has some nice shade trees, so we may use it as a net control position.

Water will be available. It promises to be hot and sunny - so bring sun screen. I suggest you follow my example and bring a big hat and a loose fitting long sleeve shirt to wear over the parade shirt. I have the parade shirts already. I will wash them once to get the sizing out of them. They are always hot and sticky when new.

We will use the Belton repeater as usual.

Have a great weekend. CU Monday morning. 73 - Darwin K5DOA

As most of you are aware of, the Texas City, Tidelands Hamfest is this
Saturday at the Doyle Convention Center. We still have ample numbers of
tables for rent, so if you know anyone that would like to reserve a swap
table, have them call me at 409-945-6794 or email me at AA5OP@.... Swap
tables are 8 ft long and come with 2 chairs each. Electricity is available at
most locations, but you may need an extension cord and a multi-outlet. Swap
tables are $7 each plus the admission fee of $5 each at the door or $4 each
pre admission.

The doors open at 7AM for Swap Table holders and 8AM to the public.
Additional information about the Hamfest can be obtained from the Tidelands
Website, HTTP://tidelands.org

Dues Paid Club members are admitted Free

To: Joe Wileman <aa5op@...>

==>PRESIDENT BUSH SENDS GREETINGS TO FIELD DAY 2005 PARTICIPANTS

President George W. Bush has sent greetings from the White House to everyone
participating in ARRL Field Day 2005.

"I send greetings to those celebrating the annual Field Day for Amateur Radio, hosted by the American Radio Relay League. Across our country, radio
plays a vital role in relaying important information to the public and emergency service personnel in times of need," the president said.

"By providing emergency communications at the federal, state, and local level, licensed Amateur Radio operators help first responders and law enforcement officials save lives and make our country safer. Your efforts
help ensure the right assistance gets to the right people at the right time.
I appreciate all ham operators who give their time and energy to help make
our citizens more secure. Your good work reflects the spirit of America and
contributes to a culture of responsibility and citizenship that strengthens
our nation. Laura and I send our best wishes."

An annual exercise aimed at developing skills to meet the challenges of emergency preparedness as well as to acquaint the general public with the
capabilities of Amateur Radio, ARRL Field Day takes place this year on Saturday and Sunday, June 25-26. Stations throughout the Americas may participate.

Hello,

My name is Paul Finch, I am running for the Board of Directors of the Texas VHF FM Society. I was licensed as WB5IDM in 1971 in the FCC Dallas office as a Technician and I upgraded to Extra a couple of years ago. My Son, KC5ZUC got his license in 1996 when he was 10 years old and my Fianc?e, KD5NXG had to get her license before I would marry her (big grin).

I grew up in Fort Worth, Texas, I lived there until I moved to Azle in 1990. In Azle I have 16.5 acres, I built my own house in 1991 then purchased and had erected a 500 foot communications tower in 1998. My first repeater coordinated by the Society was in 1975 or so. Presently I have 3 Amateur repeaters on the air and working on 5 others.

I believe in open and honest administration of the coordination process and will work very hard to make this happen.

Check the latest newsletter for more information,
http://www.txvhffm.org/newssummer2005.pdf .

I hope this post does not violate your message group rules.

Thank You,
Paul Finch
WB5IDM

no, your post is fine, but what is your position on changing the bylaws to allow election of officers by mail balloting, the process used by the arrl to elect section managers, each of which is responsible for one-third the area that the society is responsible? wouldn't mail balloting open participation to many more society members who cannot drive to the annual meetings and make the process much more democratic? what are the current weaknesses of the coordination process, and what specifically would you do to remedy those? thanks for any further information you can provide. 73, john

Topic: 1410 Message: 1413

John,

First; I have no allegiance to either of the feuding factions. I am only trying to help with the experience I have and hopefully a level head.

It all comes down to what the prospective repeater trustees wants. Are you/they willing to pay an increased membership fee (which is not required to get a coordination) as well as a required fee for each coordination to help pay for the extra expense of the ballot by mail? From the responses I have seen they don't but that's what the poll in the newsletter http://www.txvhffm.org/newssummer2005.pdf is for. From what I have read they can't do the Ballot by Mail under the current membership fee schedule. I will not know if that's true unless I am elected.

Yes, the mail ballot would afford more participation in the vote and that's OK "if" the repeater trustees and the membership is willing to pay more in dues as well as the per coordination fee.

Right now the Texas VHF FM Society membership pays for everything with no required support from the trustees.

You asked what the weaknesses of the current coordination process is. I have to tell you that I have had little problems with the current process. I personally have two repeaters on my tower now. I recently requested 5 different repeater pairs/frequencies a few months ago and all of the requests were returned approved in less that two weeks. I did have a problem several years ago though. One of the coordinators did not follow procedure and coordinated my UHF frequency pair to another Ham organization while my repeater was off the air due to theft. That problem was addressed in a very timely manner and to my satisfaction. That coordinator is no longer with the organization.

Yes, in the past there has been some mismanagement of the process, I personally can attest to that. Does that mean we have to change the bylaws that have been around for 40 years? I don't know, the Board will have to make that decision and it must be for the good of Ham Radio.

I sincerely hope this helps,
Paul

David
The two German restaurants that come to mind are:

1) Wursthaus in Harker Heights off of 190 which would be about 10 west of I35. Haven't been there but I heard it is pretty good.

2) Wahlburg Restaurant off east off I35 (FM 972) just north of Georgetown. I have been here a bunch and they often have live German music (Walburg Boys) who are pretty good. You need to call in advance to find if there are playing or not as they travel quite a bit. The food is pretty good.

Hope this helps,

Hello, David.

The number to the Walburg German Restaurant is: (512) 863-8440. They are open Wed, Thur, Sun 12Noon > 9pm; Fri-Sat 12Noon-10pm. Beer Garden is Open Fri-Sat 6pm-12Midnight. They are located 4 miles West of I-35 on 972. Exit 268, Walburg, TX.

There is another German Restaurant at 706-D Edwards in Harker Heights, TX, "Wurstmarkt". It is a German Restaurant, Deli and Bakery. Hours: 11am -9:30pm Sun-Thurs. 11am - 10:30pm Fri-Sat. Call: (254) 699-8774. Website: www.wurstmarkt706.com.

There used to be another German Restaurant, The Munchner Kindler on Sky Line Drive in Killeen, but I think that they are no longer in business.

My late husband Robert (Silent Key W7KPW) and I used to frequent these regularly before he passed away last September. I can tell you that they are all very good. Hope this helps. Eula Jett (XYL).

I felt I controlled two radios much better this year, but I improved my claimed QSO's only marginally over last year, so I don't know what that means, although I can guess. I tried to prepare better by altering and improving my sleep cycle, but after about 3 AM, I was toast although I only fell asleep for about 15 minutes this year. How (or why) do you do the 48/48 hour events!

The new 80 meter vertical seemed to work well on transmit. I listened on the beverages most of the time which I felt improved the s/n ratio. Most of the folks I could here I could work - unlike the other bands. Maybe only stations who can hear well spend much time on 80?

I don't operate 10 meters at home, so I found the suggestion posted here a few days ago to point east to listen to backscatter very useful.

Stations worked on all six bands: W1AW/5, NU1AW/3, and WD4K.

CTDXCC stations worked: N3BB 4, W5ZL 4, K5YA 2, N5AW 2, NX5M 2, W5VX 2, W5EK 1, W5JAW 1, KG5U 1, W5GAI 1, and K5AB 1.

1423. BPL ALERT BPL Alert Senate Bill 21 headed to the Floor

Yahoo group: Temple_ARC
Date: 2005-07-14 01:36:26 UTC
From: n5zxj@arrl.net
Topic: 1423 Message: 1423

All,
Governor Perry has just issued a proclamation opening the call
of the special session to consider, among other more noble things
like alternate energy, BPL legislation.

This means the pending Senate bill (SB21) will now begin to move.

http://www.capitol.state.tx.us/cgi-bin/tlo/textframe.cmd?LEG=79&SESS=1&CHAMBER=S&BILLTYPE=B&BILLSUFFIX=00021&VERSION=1&TYPE=B

Please begin writing your Senators and representatives, reminding
them of BPL's demonstrated interference to emergency communications.

Contact information of may be found:
http://www.senate.state.tx.us/75r/Senate/Members.htm#FYI

Details of BPL's threat to Amateur Radio and other services:
http://www.arrl.org/tis/info/HTML/plc/

Big money is driving this effort. Providing rural areas internet service
is -not- the intent, nor a viable business model.
Offering slightly cheaper broadband and video/movie rental to tens of
thousands in
metro areas -is-.

Jeff N5MNW (embellished note from Jim Robinson- K5PNV and Ray
Taylor- N5NAV)
PRO-BPL BILL

It is once again time to contact your legislators. Please let them
know that you are opposed to the interference caused by Broadband Over
Power Lines and therefore against this legislation. Remember we want
to keep our favorable image and relations with our legislators. It
will do more harm than good if we alienate them over this legislation.

Here is the info that I have from Jim Robinson, K5PNV, the STX SGL:

Ray,

Governor Perry has just issued a proclamation opening the call of the
special session to BPL legislation. This means the pending Senate bill
will now begin to move.

I have attached a copy of the proclamation.

Please forward this to the other SCM's and ARRL officers. I'm writing
this from a webmail interface at work and have only your address. I've
also listed Dr. Woodweaver from memory but the address I used may be

incorrect.

Jim Robinson, K5PNV
SGL

NOTE THAT I WAS UNABLE TO FORWARD THE COPY OF THE PROCLAMATION BECAUSE IT WAS IN .PDF FORMAT. ASK YOUR SM FOR A COPY IF YOU WOULD LIKE ONE.
COY

David,

I'm glad you got the message. I wasn't sure I remembered your address.

Regarding the BPL bill already heard by the Senate committee, I don't think we (amateur radio) have the clout to stop it. Perhaps my greatest fear is that if we anger key legislative leaders by making this a "fall on
our sword" issue, they will be unwilling to help us with future matters such as antenna regulation or restrictions on mobile operations. These are things that should be carefully considered in any political strategy.

Further, irrespective of whether or not the Texas Legislature enacts a BPL bill, the electric utilities can still proceed with implementation of the technology. And, whether or not a law is passed in Texas, the only viable
avenue for addressing interference will be through the FCC.

Feel free to share these thoughts with the SCMs and other ARRL officers.

Jim, K5PNV

I did the same with Steve Ogden over here. Hopefully we will se an end.
On another note, we now have high speed internet available in most of
Robertson County (Hearne, Franklin, and Calvert areas) via a wireless
system. We are a part of a rural improvement operation. I figure if that is
viable here, it should work in other areas. Maybe the power companies should
consider something in that line. And it's only a few dollars a month more
than my dial up... Now, if I could cut my gasoline bill in half each month,
I could have high speed.
73,
Paul N5XMV

Check out the Senator's Website.....it doesn't say he is in bed with the power companies...IT'S MORE: check what I've pasted from his web page.....

Senator Fraser is the chairman of the Senate Committee on Business and Commerce, which handles the flow of legislation related to insurance, telecommunications, banking, securities and lending issues, and business licensing and regulation.

Senator Fraser also serves as the co-chairman of the Electric Utility Restructuring Legislative Oversight Committee that monitors the state's shift to a deregulated electric industry, and the Property and Casualty Legislative Oversight Committee that monitors implementation of insurance reforms approved by the 78th Legislature.

From: TOM BLACKWELL
Topic: 1423 Message: 1427

I left a message on Rep. Anderson's machine Wednesday night, offering to be available in the event there are any questions. Maybe he can help with a floor amendment to remove BPL from SB 21, or to otherwise deal with it.

As I understand it - - in spite of the letters from the Texas Mayors in opposition to SB 21 on other grounds, the Senate passed the bill on Wednesday. They expect to have it on the floor of the House on Friday. I expect Rep. Phil King will find a way to legally avoid having a public hearing in the House. I am doing what I can to slow that down.

thanks for trying. i know that these things happen according to an unwritten scenerio brokered in politicalese, and i'm glad we have someone who as least has some grasp of the real, controlling events going on in the background. understanding that is the first and essential step in trying to affect the process. yet, i fear the only real threat to bpl will be further development of true wireless which will then technologically and economically bury bpl. however, in the meantime, we should do all we can. it's good to write our representatives, but if they are not involved, or if they are already owned by the utility industry, geeze. 73, john

Bill,
There used to be some activity on 145.59, but I haven't seen anything in a while. I still have a KPC-3 running, but usually catch the ISS as it passes over. Charlie N5TD can elaborate more.

from what i can tell, it has pretty much gone by the wayside except for the space station and aprs which is by far its biggest use these days. listen on 144.39. sam mcpeak, n5pay, used to be big on aprs, and may still be, but he hasn't been a tarc member for a while. i think the newer digital modes just got popular. also see www.aprs.org. 73, john

and i've just been reminded by k5tr that a lot of folks use it for dx spotting. if you have a reasonably high antenna, you can probably hear some of the ar technology austin 144 mhz nodes - www.ab5k.net for details. his node list webpage is currently broken, but i just emailed him, and he's pretty fast to fix things. a lot of logging, dx'ing and contest programs support "packet spotting", and this is what they are talking about. 73, john

1439. Re-stick glass mount antenna

Yahoo group: Temple_ARC
Date: 2005-07-17 21:51:08 UTC
From: Gary Dewrell
Topic: 1439 Message: 1439

Ok, I purchased this brand new glass mount antenna from Austin Amateur Radio on the 2nd. Followed the mounting instructions to the letter. Yesterday it popped off. I have tried the same glue that you use to put on a rear-view mirror and supper glue. Niether would stick. Anyone got any ideas what will work to restick this antenna?

Thanks in advance.

Gary

I have used the double sided tape that is used to put the plastic moldings on cars. I suggest 3m for best results. You can usually find small rolls of it at the neighborhood parts store. Some even sell it by the inch or foot. I buy rolls of 25' for the shop, and that is WAY expensive for what you want. You might even visit a local body shop, and see if they will "donate" a couple inches of it. There has been info posted that it MUST be the SAME tape as the manufacturer used, but I never noticed any difference in SWR, or power. Make sure to clean ALL surfaces VERY good. Use either alcohol (rubbing) or nail polish remover (non-oily_ to clean them. Be VERY careful with the cleaners, as some will cause harm to new painted or non-baked painted surfaces. They are also very flammable.

1441. RE: [Temple_ARC] Re-stick glass mount antenna

Yahoo group: Temple_ARC
Date: 2005-07-18 02:38:42 UTC
From: Steve Bosshard (NU5D)
Topic: 1439 Message: 1441

Some glass mount antennas use double stick foam tape. Some use double faced rubber tape. I have found #1 - extreme cleanliness prior to installation, and #2, a small bead of RTV around the perimeter of the mount support piece. This mount support piece is a plastic cover that goes over the base of the antenna and gives greater surface area for support - a small amount of RTV goes a long way.

Ssb

1445. SB 21 Senate bill regarding BPL... write your Rep. & Sen.

Yahoo group: Temple_ARC
Date: 2005-07-19 00:15:31 UTC
From: n5zxj@arrl.net
Topic: 1445 Message: 1445

GET THE WORD OUT NOW!!

SB 21 passed the Senate Sunday evening... nearly 100%
NOW its time to write Them again ABOUT FLAWED TECHNOLOGIES!!

Here is a copy of a letter that you can send to your Rep. or Sen. and
Governor, Lt. Gov.

Needs to be Adjusted and corrected to your likeing and areas of expertise...

Gerald

Below is what I have sent this afternoon, addressed personally to the TX
House members from the Temple, Austin area, and to Reps. Will Hartnett,
and Richard
Raymond (including his assistant, David Parnell).

Please feel free to transmit this (or your additions) to your own Rep and
anyone in the legislature you want to influence.

If we speak with one voice, then perhaps we will be heard.
Your rep email should be first.last@...

If that bounces, go to http://www.house.state.tx.us/members/welcome.htm
and look the fax number and fax your letter.

Skip W5GAI
Austin
Skip Cameron
794-0531

Dear Representative July 15, 2005

Please take action to delete and/or amend certain provisions regarding BPL
in SB21 this Sunday.

Broadband Internet over Power Lines (BPL) as provided for in SB21 will
unleash a flurry of activity that will end up costing Texas taxpayers and
electric utility rate payers and investors huge dollar losses from an
avalanche of complaints as well as economic failure.
* In my humble opinion, with 35 years of computer industry experience, SB21
BPL provisions will unleash the next Enron. Why? BPL as currently
implemented, with field tests validating it, radiates interfering signals in
the 1.8-80 megahertz radio frequency spectrum used by many FCC licensed
voice and digital services, many who are relied on for emergency
communication services.

Please introduce amendments on the House floor debate on SB21.

Here are the choices, in order of priority as I and many other concerned Texans see them:

1. Delete Section 33.001 (b) and Chapter 43 in its entirety. Replace with:

CHAPTER 43. USE OF ELECTRIC DELIVERY SYSTEM FOR ACCESS TO BROADBAND AND OTHER ENHANCED SERVICES, INCLUDING COMMUNICATIONS SUBCHAPTER A. GENERAL PROVISIONS

Sec. 43.001. LEGISLATIVE FINDINGS. The legislature finds that broadband over power lines, also > known as BPL, is an emerging technology that provided potential yet significant risk to licensed users of the radio frequency spectrum it would use. The PUC is directed to study BPL technologies and recommend to the next legislature if, how, what and when this technology should be supported by legislation from this body.

[This recommendation was justified by:
a) Testimony before the House Regulated Industries Committee and Senate Business and Commerce Committee by Skip Cameron and FCC licensees Tom Blackwell and Bill Lawless.

b) Opposition to BPL that is on record at the FCC and was given to the bill sponsors and their committees by Mr. Blackwell: - National Association of Broadcasters:

FCC)]

2. If the majority is determined to pass some sort of BPL legislation, then improve the procedures by which BPL is allowed to be implemented, in order to prevent abuses:

Add Sec. 43.001. LEGISLATIVE FINDINGS. (d) The Legislature intends that BPL systems operate without causing interference to licensed users of radio spectrum.

Add Sec. 43.056 PERMITTING. The Public Utilities Commission (PUC) will create a permitting process, with public notices and hearings before a permit to build or operate a system is granted.

To apply for a permit, the applicant would have to state that the design complied with all FCC rules and would not cause interference to licensed communications. The application would show that there has been a review by a licensed professional engineer, who would state that the proposal complies. The PUC would have to find that the proposal complies before allowing it to be constructed or operated.
An application fee may be charged would fund any additional expenses that result from this process.

The PUC is granted rulemaking authority to establish these procedures, and set the amount of the application fee.

Add Sec. 43.057. COMPLAINT RESOLUTION. The Public Utilities Commission (PUC) will create a > complaint process, with the ability of the PUC to issue an emergency order that a BPL system that does not comply with the law be shut down immediately upon notice.

Procedures will provide for: action on citizen a complaint if a representation on the application for a permit was false, or if the equipment malfunctioned and was no longer complied with the terms of the PUC permit.

These options are extremely important and need your proactive effort to introduce and solicit passage of them in the House.

Attached are two recent communications about the risks of BPL interference to important emergency communications services that are vital to safety of Texas citizens. There are also a large number of filings with the FCC, which may be accessed at
http://www.arrl.org/tis/info/HTML/plc/

Thank you for your consideration and action on the House floor this Sunday!

Mr. Tom Blackwell
Dallas, TX
via email
July 14, 2005

Dear Mr. Blackwell,

I am writing to address possible consequences of Broadband of Power line interference to the US Coast Guard auxiliary communications. As you may know, the Auxiliary is part of the US Department of Homeland Security. We use HF communications in our role in supporting disaster relief and in other matters authorized in our role, including increasing responsibilities for homeland security. I am an officer in US Coast Guard Auxiliary and immediate past Division Staff Officer in charge of communications for Division 5, which covers the North Texas region. While I am not writing on behalf of the US Coast Guard Auxiliary (only the Commandant may authorize official communications,) I am deeply concerned about any potential interference to HF communications, not only to the US Coast Guard Auxiliary but also to any agency that participates in emergency communications.

HF communications is growing in importance in The US Coast Guard Auxiliary. In fact, our division has actively trained and licensed a number of Auxiliary officers as amateur radio operators this year. In my opinion, the Auxiliary's emergency operations could be significantly hampered should there be interference to the HF bands. While we are not allowed to actively lobby in our official roles as Auxiliary officers, I would like to assure you as a private citizen I would be very worried about our abilities to perform our duties should such interference be present.

Sincerely,

John P. Fullingim
5802 Club Oaks Drive

Subject: Communications Services in BPL spectrum
Date: Fri, 15 Jul 2005 16:36:11 -0500
From: Stuart Rohre
To: Skip Cameron scameron@...

Skip,

you can add to your list the National Red Cross disaster frequency in the 40 MHz Band. This is used by all their mobile units as well as Chapter Base stations in Houston, Dallas, Ft. Worth, Austin, Waco, San Antonio, El Paso, etc.

There are numerous rural fire departments in Texas, usually volunteer using low band 30 to 50 MHz, and Homeland Defense grants are going away, thus they have no way to finance any other radio systems, nor are they able to operate other systems in many areas.

The negative effect on Red Cross operations responding to house fires nation wide, as well as other disasters, and on individual volunteer fire departments should be considered by law makers before supporting BPL.

In addition many smaller towns local governments such as Round Rock and large ones like Austin maintain low band (below 80 megahertz) licenses for communications backup systems.

Sheriffs and Constables in rural areas are others would be affected by BPL interference, because of their use of low band frequencies.

1448. Fw: [CTDXCC] Texas Senate Bill SB21 on BPL

Yahoo group: Temple_ARC
Date: 2005-07-19 19:04:57 UTC
From: john, ke5c
Topic: 1448 Message: 1448

Subject: [CTDXCC] Texas Senate Bill SB21 on BPL

On Sunday July 17 during the Texas House session, Rep. Will Hartnett offered the following amendment which passed. Will is the Rep. for Tom Blackwell N5GAR and has been receptive and helpful in our effort to amend the BPL provisions. Tom is to be congratulated for his persistent efforts in getting the only TX legislator to offer an amendment on the BPL issue. Hartnett told me just before the Sunday session that the more detailed amendments we had offered would not be able to muster a majority, and he was going to try a simple insertion to engage the PUC in the process. This at least gives us the opportunity to address the TX Public Utilities Commission on complaints, and also to see if they are willing to make rules that require BPL operators and their utility partners to prove non-interference before they will be permitted to install and operate. SB21 is still pending, and will not move forward in the TX legislature until the school finance bill passes. The special session ends Wed. midnight, and if no passage, the Governor will call another session.

I have learned that TX Department of Transportation statewide still uses six 47MHz frequencies for communications, in addition to 932MHz. When they have road closures, as in emergency situations, this 47MHz system is heavily used. I will see if I can enlist a letter from someone in authority at TX Dot in opposition to BPL, or at least in favor of putting permit requirements on applicants for demonstrated non-interference.

Skip W5GAI

TX House Journal July 17, 2005:
Amendment No. 13
Representative Hartnett offered the following amendment to SB21:
Amend SB 21 as follows:
On page 10, line 7, between "Commission" and "representative" insert
"or Public Utilities
Commission"
Amendment No. 13 was adopted.

The section should now read:
Sec. 43.152. COMPLIANCE WITH FEDERAL LAW. BPL operators shall comply with all applicable federal laws, including those protecting licensed spectrum users from interference by BPL systems. The operator of a radio frequency device shall be required to cease operating the device upon notification by a Federal Communications Commission or Public Utilities Commission representative that the device is causing harmful interference. Operation shall not resume until the condition

causing the harmful interference has been corrected.

I talked to WA0SAP on July 14 UTC time on 40 meter CW, and he asked me the same questions. I told Dave that as far as I knew he was an SK, but was not 100% positive of that fact.

I did receive a card from Dave today, and I sent one back to him in reply. The man is very nice, and we had a wonderful conversation on 40 CW.

1463. Field Day Breakdown

Yahoo group: Temple_ARC
Date: 2005-07-21 18:17:06 UTC
From: Warren Rowe
Topic: 1463 Message: 1463

Just wondering, what was the breakdown of bands used for Temple ARC's Field Day setup?

As for me, I used 15, 20, 40, and 80 SSB and 40/80 CW. 15 was the best band, and I had a major run into the Northeast early Saturday evening with about 75 contacts in about 1 1/2 hours. After that though, pfffffffffft!

I'll see about next year's Field Day concerning how or where I'll operate. But it was fun as always!

1466. Fw: The new BPL bill is SB 5 / HB 13

Yahoo group: Temple_ARC
Date: 2005-07-21 23:39:32 UTC
From: John (KE5C)
Topic: 1466 Message: 1466

Subject: The new BPL bill is SB 5 / HB 13
Date: Thu, 21 Jul 2005 10:55:35 -0500
From: TOM BLACKWELL <tom.blackwell@...>
Reply-To: decision@...

The 2nd Special Session of the Texas Legislature is now proceeding. A new pro-BPL bill by Senator
Fraser has been filed -
- it is SB 5. The BPL issue has been added to the call of this Session by Governor Rick Perry. It
has been referred to
the Senate Business and Commerce Committee which is, of course, chaired by Senator Fraser.

Click here:

http://www.capitol.state.tx.us/cgi-bin/db2www/tlo/billhist/actions.d2w/report?LEG=79&SESS=2&CHAMBER=S&BILLTYPE=B&BILLSUFFIX=00005&SORT=Asc

Senator Fraser's committee is meeting at his desk as I type this. No testimony from the public is
allowed at this meeting.

A companion bill has been introduced in the House by Rep. Phil King. It is HB 13.

Click here:

http://www.capitol.state.tx.us/cgi-bin/db2www/tlo/billhist/billhist.d2w/report?LEG=79&SESS=2&CHAMBER=H&BILLTYPE=B&BILLSUFFIX=00013

It contains this, which incorporates the Hartnett amendment to SB 21:

Sec. 43.152. COMPLIANCE WITH FEDERAL LAW. BPL operators
shall comply with all applicable federal laws, including those
protecting licensed spectrum users from interference by BPL
systems. The operator of a radio frequency device shall be required
to cease operating the device upon notification by a Federal
Communications Commission or Public Utilities Commission
representative that the device is causing harmful interference.
Operation shall not resume until the condition causing the harmful
interference has been corrected.

The posting rule has been suspended, so we will not have the notice of a hearing. Such notices are
usually provided on the
House floor - - which is carried live with a video feed on the Internet.

As a follow-up, just got word that Speaker Craddick announced that the House will take up the telecom legislation next Tuesday. The Senate
Business & Commerce committee already voted out the telecom bill this morning. But until the school finance and tax bills are agreed to (HB2 and
HB3), telecom ain't going anywhere. By the way, the BPL provisions of the
telecom bill apply only to IOUs and coops, not to municipal utilities. The
bill leaves local control of BPL to the municipal utility.

1483. CW Practice and Operation Postponed Temporarily

Yahoo group: Temple_ARC
Date: 2005-08-01 20:35:19 UTC
From: WR1TX
Topic: 1483 Message: 1483

Unfortunately, you just can?t catch a break?

I had previously posted that I was trying to start practicing CW actively on HF. But after one attempt with N5DJJ, the landlord decided he wanted to start re-roofing the house! Yes, the roof needs replaced, but I wanted to practice CW!

Since the entire property has been taken over, I?m forced to postpone getting on the air using CW until the roof is finished. That may take another week or two, since the landlord is doing it himself (even in the heat of the afternoon).

When I?m ready to get back on the air regularly again, I?ll post it here.

(Sorry, Jim?we?ll try again soon, I promise!)

Warren / WR1TX

1484. Fw: [CTDXCC] Ham-Com 2006 date & location announced

Yahoo group: Temple_ARC
Date: 2005-08-01 22:01:34 UTC
From: john, ke5c
Topic: 1484 Message: 1484

(note: I have heard the attendance and the exhibitors have fallen off the past year or two at Ham-Com. Looks like they have decided to react. - John, KE5C)

----- Forwarded message from wa5kxx@... -----

Date: Mon, 1 Aug 2005 13:24:40 -0400
From: wa5kxx@...
Subject: Ham-Com 2006 date & location announced

Ham-Com 2006 will be held at the Plano Centre, in Plano, TX, June 9-10 (Friday and Saturday), 2006. The event will open at 7:00 a.m. on both days. Commercial exhibitors and table-top vendors will remain open until 6:00 p.m. on Friday and Saturday. Classes will run until 9:00 p.m. both days.

Look for complete details about the event on the Ham-Com web site at http://www.hamcom.org/ after Labor Day 2005.

I almost forgot to mention that the Ham-Com, Inc. Board of Directors met their goal of reducing prices for everything from exhibitor booths to admission. Here's the QST:

- Commercial exhibtor booths - $250.00

- Tabletop vendors - $20.00 (two (2) days)

- Tabletop vendors - Saturday only price ($10.00)

- Parking - FREE! (did we say "FREE?")

- Overflow parking - FREE with shuttle bus at no charge!

- Admission: $7.00 online; $8.00 at the event

There is space for ~72 commercial booths and 200 tables (the outdoor table are under covered porticos. There is also space for twelve (12) 8 x 8 canopies in the enclosed courtyard. These spaces will be available at the $10.00, Saturday-only price.

The prices for Ham-Com 2006 are substantially lower than for the 2005 event. Commercial exhibitor space sold for $325.00, tabletops cost $35.00, admission was $9.00 online/$10.00 at the event and, of course, the infamous parking fee was $5.00 per day (did we say parking was FREE?).

Out-of-town visitors will enjoy lower hotel rates than at our previous location. Group rates in Plano, TX will run from $59.00 to $79.00 per

night. Food and beverage should be more reasonable and we promise not to pump anything into the air that will induce you to buy $4.00 hot dogs and $2.00 soft drinks. The Ham-Com, Inc. Board of Directors thinks that the venue in Plano will serve the event's needs for the next five to ten years.

You're the first to know...

From: Charlie Schlieper
Topic: 1485 Message: 1485

The UHF/VHF CrossBand Repeater on the ISS has been ON-THE-AIR and is working very well. The UPLINK is 437.800 MHz +/- Doppler Shift, and DOWNLINK is 145.800 MHz +/- Doppler Shift. Remember that the Doppler Shift for UHF is approximately THREE times that of 2-meters! One very important TIP is to "WATCH YOUR DEVIATION." If you over-deviate, it simply cuts you OFF. For non-satellite rigs, you can program in several channels to compensate for the Doppler Shift. (I use FIVE CHANNELS on one radio, but that's probably overkill.) Three channels will do. I shift the 2-mtr side from ZERO to +/- 3 kHz, while shifting the UHF side ZERO to +/- 9 kHz. I just worked N4GM, Grant, in Sunrise, Florida, and KB7BSA, Christy, in Mentone, Alabama on the last pass at 1626 hours UTC, Monday, August 1, 2005. Give it a try sometime...

Enjoy Ham Radio!

John,

At least they made the parking free! Only problems I see is it's in Plano! Why would they move it to Plano! That is a terrible drive from almost anywhere in the Metroplex. I know, I used to drive 63 miles one way to get there. Apparently they want it to get even smaller! The price on the tables are good but the admission is still high if you ask me. Probably won't go again this year, last year is the first time I missed going in about 10 years.

1487. Working the ISS CrossBand Rptr

Yahoo group: Temple_ARC
Date: 2005-08-02 23:10:13 UTC
From: Charlie Schlieper
Topic: 1485 Message: 1487

On working the ISS CrossBand Repeater in space...

I previously sent the following information: ---------

>The UHF/VHF CrossBand Repeater on the ISS has been ON-THE-AIR
>and is working very well. The UPLINK is 437.800 MHz +/- Doppler Shift,
>and DOWNLINK is 145.800 MHz +/- Doppler Shift. Remember that the
>Doppler Shift for UHF is approximately THREE times that of 2-meters!
>One very important TIP is to "WATCH YOUR DEVIATION." If you over-
>deviate, it simply cuts you OFF.

I mentioned working N4GM, Grant, in Sunrise, Florida, and KB7BSA,
Christy, in Mentone, Alabama on a pass August 1st, and I worked
additional stations today. This FM Crossband repeater is working
so well, I would like to encourage others to give it a try!

While I mentioned that shifting the 2-mtr side from ZERO to
+/- 3 kHz, and the UHF side from ZERO to +/- 9 kHz are good
working limits, you might NOT want to use the LIMITS if you are
using just THREE programmed channels.

If using THREE channels, pick something like:
Channel 1 XMIT 437.795 RECV 145.802 MHz
Channel 2 XMIT 437.800 RECV 145.800 MHz
Channel 3 XMIT 437.805 RECV 145.798 MHz

Use channel 1 when the ISS is approaching, Channel 2 for ZERO
Doppler Shift, and channel 3 when the ISS is descending.
If you must, put in 145.800 MHz for RECEIVE on all three!
The 2-meter Doppler is small compared to the UHF side.

Additional Note---
From many reports passed along, the Kenwood D700 rig aboard
the ISS may have a faulty Crossband Repeat Audio problem,
causing it to accentuate audio pre-emphasis in that mode.
This may be why this system seems to be rather critical of any
signals which are "over-deviated." If your radio is hot, shouting
into your mic will get you instantly cut OFF! The best thing to
do is to check and make sure YOUR deviation level is properly
adjusted. If you can't do that, then back off your mic.

Enjoy Ham Radio!

Yahoo group: Temple_ARC
Date: 2005-08-03 17:58:37 UTC
From: Charlie Schlieper
Topic: 1485 Message: 1490

I have worked a few contacts with an Omni Vertical antenna, but
usually when the pass crosses my rotor limits in an awkwardly and
I didn't have either my Satellite CP antennas positioned in such a
way to switch over to in time.

Most of my ISS cross-band contacts were made with 50-watts FM,
a rather "medium" level of power, using my quad 18-element uplink
Yagis and my quad 13-element downlink array. For high elevation
angles, I still switch over to my CP satellite antennas-- 22-element Dn
and 40-element Up, for best results.

Because the ISS cross-band repeater is indeed FM, QRP power
levels are a real challenge! (FM capture ratio not only depends on
how strong you are, but how good your Doppler compensation is.)

I expect the ISS cross-band repeater to be OFF for a short while during
the process of PCSAT2 being attached to the outside of the ISS. This
is currently in progress now. (PCSAT2, a replacement for the old PCSAT,
will have 9k6 telemetry on 437.975 MHz.)

It looks like PO-28 will be converted to Amateur Radio use very soon,
and have 9k6 FSK data downlinks on 435.250 and 435.275 MHz.

73,
Charlie, N5TD

1491. Current ISS Ham Mode Status

Yahoo group: Temple_ARC
Date: 2005-08-03 23:45:29 UTC
From: Charlie Schlieper
Topic: 1491 Message: 1491

I worked the ISS Packet Digipeater this afternoon around 5:17PM.
The CrossBand FM Repeater is still OFF-THE-AIR, for the time being.

You might want to keep your KEPS updated often on the ISS. There's been
an orbital altitude correction burn recently, which put the ISS behind the
computer tracking by almost 2 minutes. My computer TIME was accurate
with WWV, and my KEPS only one day old. When I downloaded the latest
Keplerian data today, it confirmed the tracking error.

Enjoy Ham Radio!

1494. August 6, 2005 TSGARC

Yahoo group: Temple_ARC
Date: 2005-08-04 18:50:27 UTC
From: Carolyn Black
Topic: 1494 Message: 1494

Thank you for allowing the following to be posted with the Temple_ARC yahoogroup.

The TSGARC Presents

Lake Waco Carp Tournament

(In lieu of this fund-raiser, there will be no August 8 dinner/program at the clubhouse)

Everyone's Welcome

Saturday, August 6, 2005

Speegleville III Pavilion, Lake Waco

Music all day provided by Jim Miller's "At The Hop" DJ Productions

8:00 a.m. - 5:00 p.m. Fishing/weigh-in/Exhibits

5:00 p.m. - 7:00 p.m. Jasper's BBQ Dinner

6:00 p.m.- 10:00 p.m. Awards and Dance, Tony Calhoun & Pleasure

$5.00 Dinner, $10.00 Awards and Dance

Fishermen can resister for contests and prizes. For registration form and fishing information go to www.geocities.com/w5tsg and www.centexoutdoors.com/carp05.html

The TSGARC cordially invites you to attend the fun festivities. Thank you for your support and all you do for our great hobby.

Carolyn Black, kd5glm

TSGARC Secretary

1495. Slinky Antennas

Yahoo group: Temple_ARC
Date: 2005-08-07 13:18:41 UTC
From: WR1TX
Topic: 1495 Message: 1495

Has anyone on the reflector ever worked with the concept of Slinky antennas?
I?ve been researching these interesting antennas, and I was just wondering
if anyone locally has tried building and using one for use on the HF bands.

Warren, WR1TX

Sure. When I was a novice back in 1976 and living in a apartment
in Temple I had a Slinky[tm] dipole. I used it on 40 meters. This
was a commercial product that was and maybe still is advertised in QST.
I had it strung up across the end of my bedroom right at the ceiling.
It had a physical length of about 11' and I was able to work stations
on 40 meters in the novice band running about 100 watts. I still
have this antenna in my storage shed. The slinky's
are about six inches OD so they are much larger than the ones that you
by at the toy store.

But I really question if it is needed.

There are cases where it might make sense but I can also
say that any space issues can be solved in much
simpler, lower profile, more efficient ways.

BTW - for 10 and 15 meters I used a full size dipole strung down the
hallway of the three bedroom apartment. I made a 10 meter dipole and
then put an insulator and then added the remaining length needed for
15 meters and when I wanted to change bands I just put a jumper across
the insulator.

1497. RE: [Temple_ARC] Slinky Antennas

Yahoo group: Temple_ARC
Date: 2005-08-07 13:40:05 UTC
From: WR1TX
Topic: 1495 Message: 1497

Ah, George! Good to hear from you, it's been quite a while.

I agree with the idea that a Slinky antenna may not necessarily be needed; this would certainly be true on the higher bands (10 through 20). But on the lower bands (40, 75/80) it may not be a bad idea.

I'm looking at this more from a portability standpoint as opposed to regular usage in a residence. I live on a small lot here in Temple and can manage enough space for an inverted-V and a sloper to work just fine. I do go camping on occasion, and with the potential of operating portable enticing me, I'm looking at all my options. If I have plenty of space, a regular dipole or inverted-V will work. If I have limited space, antennas such as the Slinky may well work.

Your suggestion will be taken under serious consideration. Thanks!

Warren Rowe, WR1TX (ex-KM5EW)
Temple, Texas

Yahoo group: Temple_ARC
Date: 2005-08-08 00:43:32 UTC
From: Steve Bosshard (NU5D)
Topic: 1499 Message: 1501

Has the FAA been contacted lately? Maybe some upgrades remedied this problem and it could be re-visited, or is this here to stay? Do you have a contact name and number at the FAA for testing to see if my installation causes trouble? Just finished putting 35 element long yagi (6 ft) together for 1296 - M2 brand antenna and will have it installed near the top of the Gatesville tower. Probably not enough ERP at 40 miles to bother them, but who knows?

Thanks,

Steve

1507. News about MT-63 Mode

Yahoo group: Temple_ARC
Date: 2005-08-09 18:51:39 UTC
From: Charlie Schlieper
Topic: 1507 Message: 1507

The Radio Society of Great Britain has formally adopted the MT-63 digital mode as the preferred mode for sending their weekly news bulletins (GB2RS). They are using 1kHz bandwidth with long interleave on 3592.0kHz USB, 7092kHz USB, and 14.1095 MHz USB, at 2015 hrs UTC, on Sundays. At a later time, 2045 UTC, there is a lower frequency transmission on 1992.0kHz USB. (There were also two 60-meter frequencies mentioned, both of which are below our five authorized 60-meter channels, that may be used for MT-63 transmissions from the UK. Those were 5279.0kHz USB, and 5259.0kHz USB.)

Enjoy Ham Radio!

I think that you could do better by being creative with wire.

I could make some suggestions but I would have to know the
limitaions.

1510. Fw: [CTDXCC] Texas telcomm bill on Gov Perry's desk for signature

Yahoo group: Temple_ARC
Date: 2005-08-10 22:19:41 UTC
From: john, ke5c
Topic: 1510 Message: 1510

----- Original Message -----
From: "Phil & Ann Duff" <na4m@...>
Sent: Wednesday, August 10, 2005 5:23 PM
Subject: [CTDXCC] Texas telcomm bill on Gov Perry's desk for signature

The telecomm bill has passed both the Texas House and Senate and
awaits the Governors signature.
http://www.statesman.com/news/content/shared/tx/legislature/stories/08/10telecom.html

Senate Bill 5 (SB 5) has some protection:

Sec. 43.152. COMPLIANCE WITH FEDERAL LAW. BPL operators
shall comply with all applicable federal laws, including those
protecting licensed spectrum users from interference by BPL
systems. The operator of a radio frequency device shall be required
to cease operating the device upon notification by a Federal
Communications Commission or Public Utilities Commission
representative that the device is causing harmful interference.
Operation shall not resume until the condition causing the harmful
interference has been corrected.

but it seems to me that the last sentence is very ambiguous about who
it applies to:
"...operator of a radio frequency device..."
could be used in reverse by BPL/utility lawyers via the FCC or PUC to
shut down amateur radio operators that interfere with BPL systems
instead of the other way around.

Is there more to this legislation in this regard and am I off base on
this and read/interpreted it incorrectly?

That was supposed to read like this;

> Sec. 43.152. COMPLIANCE WITH FEDERAL LAW. BPL operators
> shall comply with all applicable federal laws, including those
> protecting
LICENSED spectrum users from interference by BPL
> systems.
The operator of a UNLICENSED radio frequency device shall be required
> to cease operating the device upon notification by a Federal
> Communications Commission or Public Utilities Commission
> representative that the device is causing harmful interference TO A
LICENSED SERVICE.
> Operation shall not resume until the condition causing the harmful
> interference has been corrected.

PERHAPS WE NEED TO MAKE SURE IT IS WORDED EXACTLY LIKE THAT.

I would be more comfortable if this were worded differently.

But consider this:

It is titled "Compliance with Federal Law." BPL operates under Part 15. The Federal rules set out the arrangement where Part 15 devices have to accept interference. Note the sentence "BPL operators shall comply with all applicable federal laws, including those protecting licensed spectrum users from interference by BPL systems." Amateurs are licensed spectrum users.

The terms "interference" and "harmful interference" are not defined in the state BPL Bill.

"Harmful interference" is defined in the Federal rules, in Part 97 and Part 15.

The FCC defines "harmful interference" under ?97.3(a)(23) as "Interference which endangers the functioning of a radionavigation service or of other safety services or seriously degrades, obstructs or repeatedly interrupts a radiocommunication service operating in accordance with the Radio Regulations."

The similar definition in Part 15 is:

(m) Harmful interference. Any emission, radiation or induction that endangers the functioning of a radio navigation service or of other safety services or seriously degrades, obstructs or repeatedly interrupts a radiocommunications service operating in accordance with this chapter.

Also in Part 15, there is this - note paragraph (b):

Sec. 15.5 General conditions of operation.

(a) Persons operating intentional or unintentional radiators shall not be deemed to have any vested or recognizable right to continued use of any given frequency by virtue of prior registration or certification of equipment, or, for power line carrier systems, on the basis of prior notification of use pursuant to Sec. 90.63(g) of this chapter.
(b) Operation of an intentional, unintentional, or incidental radiator is subject to the conditions that no harmful interference is caused and that interference must be accepted that may be caused by the operation of an authorized radio station, by another intentional or unintentional radiator, by industrial, scientific and medical (ISM) equipment, or by an incidental radiator.
(c) The operator of a radio frequency device shall be required to cease operating the device upon notification by a Commission representative that the device is causing harmful interference. Operation shall not resume until the condition causing the harmful interference has been corrected.

(d) Intentional radiators that produce Class B emissions (damped wave) are prohibited.

Also in Part 15, "exempted devices" are still required to "stop operating" if they cause "harmful interference" - -

Sec. 15.103 Exempted devices.

The following devices are subject only to the general conditions of operation in Sec. Sec. 15.5 and 15.29 and are exempt from the specific technical standards and other requirements contained in this part. The operator of the exempted device shall be required to stop operating the device upon a finding by the Commission or its representative that the device is causing harmful interference. Operation shall not resume until the condition causing the harmful interference has been corrected. Although not mandatory, it is strongly recommended that the manufacturer of an exempted device endeavor to have the device meet the specific technical standards in this part.
(a) A digital device utilized exclusively in any transportation vehicle including motor vehicles and aircraft.
(b) A digital device used exclusively as an electronic control or power system utilized by a public utility or in an industrial plant. The term public utility includes equipment only to the extent that it is in a dedicated building or large room owned or leased by the utility and does not extend to equipment installed in a subscriber's facility.

Since the Federal rules set out these requirements, and since the Texas bill says "BPL operators shall comply with all applicable federal laws, including those protecting licensed spectrum users from interference by BPL systems," they would be required to comply with the laws that provide us with licenses to use these frequencies, as well as the rules that require them to accept interference from licensed users. They would also be required to comply with the Federal rules on "harmful interference." If there were any claim that we caused "harmful interference" to a BPL system, we would be able to show the PUC that we have license(s) to transmit on these frequencies, and call signs. The BPL systems do not have licenses or call signs. With that arrangement in the Federal law, a BPL operator would be crazy to try to expand on the Federal requirements by trying to claim such an interpretation of the State Law. This is particularly since Part 15 requires that "interference must be accepted that may be caused by the operation of an authorized radio station ..." If a BPL operator filed a complaint with the PUC that an amateur was causing interference to his system, I would argue that the complaint itself, on its face, demonstrates a lack of compliance with the Federal AND State laws.

So while I wish we had all the provisions I recommended to Rep. Hartnett, or that we did not have a BPL bill at all, it appears this is all we are going to get from the cartel that controls the State Government.

They are now proceeding with the BPL bill without allowing any public testimony. The committee meetings take place at a desk on the floor, not in a committee room.

An example:

http://www.capitol.state.tx.us/tlo/79R/minutes/C4252005072100001.HTM

We would have different results with all of this if different people occupied these offices. The ones who are there now have a different view of the public interest than I have. Texas Monthly just named Phil King one of the 10 "worst legislators." They have previously given Gov. Rick Perry a similar designation. I think that with the new and additional taxes and fees that this Legislature is passing, the public will make some changes with the November, 2006 election.

1527. Modifying an RJ RigBlaster

Yahoo group: Temple_ARC
Date: 2005-08-12 22:52:08 UTC
From: Charlie Schlieper
Topic: 1527 Message: 1527

If anyone is still using a RIGBLASTER sound-card interface
for Digital Modes, you might be interested in this modification.

The older versions of RIGBLASTER used an AUDIO cable to
the radio external speaker jack. The MIC input was switched
from MIC to DIGITAL, with the switch on "Auto," but the plug
had to be pulled out for VOICE.

If your radio has a DATA port on it, you can easily change
this AUDIO cable feed-- from the external speaker jack over
to the data port audio. It frees up the radio speaker for VOICE
use, as works with DIGITAL. It also allows the VOLUME control
to work independently from the constant level audio that feeds
the RigBlaster. You have the best of both worlds.

Enjoy Ham Radio!

I have been suggesting this along with putting funds back into Ham radio thru the BIG PROJECT for several years now.

Both are very worth while contributions!

The Big Project at least helps gain new Hams!! Young Hams at that.. Compared to giving it to a college student that doesn't have any interest in the hobby. I don't have a problem with giving to college students.

I see the monies better spent going back into Ham Radio....Remeber we lose approximately 200 hams a month as SK's, compared to 125 new hams a month.

We could, if enough people would be willing to help, and not just from TARC, get a big project school in our area..

From: Garrett Hill
Topic: 1525 Message: 1529

I agree that a contributioin to spectrum defense be made by TARC. I hope we would not go too far, however, there are other needs for our funds. We should encourage the members of TARC to contribute too. The speed and momentum of both federal and state action in permitting BPL communication despite Amateur Radio objections, is indicative of how fast we can lose valuable chunks of spectrum.

I intend to suggest we allot a reasonable amount to expand and keep current a library of publications on subjects of interest to Hams. Rules should be approved by the TARC Board of Directors to control lending and return of library publications and to assign responsibility to an appointed librarian to manage the library.

A library would be a direct source of support to ham radio through our members.

1533. Re: [Temple_ARC] ARRL Spectrum Defense Fund

Yahoo group: Temple_ARC
Date: 2005-08-15 15:57:09 UTC
From: Steve S. Bosshard
Topic: 1525 Message: 1533

Fellow Radio Amateurs,

In the matter of spending club funds to promote ham radio:

Over the last 20 or 30 years, I have seen countless people get a ham license, be active for a year or two, and then leave ham radio for something else. Some folks got ham licenses so they could use a phone patch, or talk with family members who also got their ham licenses. Some folks would get a license, buy a talkie, modify it so it would go into public safety channels, and parade around with the local police and fire blaring from their 'ham' talkies. Some folks got their ham license so they could have clear 6M frequencies for their radio control model airplanes. Some folks use ham radio around weather spotting and psuedo emergency activities to the exclusion of any other ham activities.

All of the above are indeed uses of ham radio, but many could be better served outside of ham radio. Cellular has just about negated practical use of autopatches. Also Cellular and GMRS and FRS provide personal communications between family members without having to mess with taking a license examination. Ham radio no longer provides a useful or viable backup to public safety communications with satellite communications connecting remote areas of the earth, and cells on wheels and other redundancies in the commercial arena providing restoration to public safety. There are over 3500 two way radios in our local public safety communications system. The resources available in the ham community cannot begin to handle this kind of volume of traffic. When is the last time you handled health and welfare traffic? The Mexico City earthquake in 1985??? Times have changed.

My point is that building numbers of hams through agressive licensing practices does not necessarily build the ham community. Sheer quantity at the expense of quality is not the answer. Getting your ticket is just the entry to ham radio. From that point forward hams should grow into the hobby, learn from other hams, and contribute to the hobby. Getting an Extra Class license doesn't mean very much without the knowlege and experience achieved over time, code or no code doesn't matter. Also there is a responsibility to share this wealth of experience with newer hams.

With this in mind I think growing and fostering our own ham community and getting rid of the divisiveness in our club will do much more than throwing money at the numbers problem. Invite hams you haven't seen in a while to attend a club meeting. Have ham radio programs that are interesting. Foster activities like antenna parties, club participation in contests, Field Day, and demonstrations at our local schools. JOTA is another area where our club can shine. Get up and do something other than complain....

For these reasons I would rather send our monies in defense of spectrum, and work on growing the ham community from within our own community and in our own community.

TO Whom It May Concern:

I have had my license almost 10 years and I have seen a lot of changes in the world of Amatuer Radio and talking about promoting it is a very lost cause.
When, I first got my license I need a lot of help and information on the different mode of operations and how they worked and what type of antenna, etc.
Being around a radio shop and have a general ideal of the 70cm band and how it works I was able to get the right equipment in working order.
The very first time I had asked a elmer for help it was like I was intruding where I dont belong and from that time on I will not ask nor will I give help in return .
Its like a lot of the clubs its a click thing and their for Im sure that I dont stand alone in saying that if youre not in the click then you dont derserve any of the benifits from it their for in my opion alll the clubs can keep their clicks to themselves.

I will upgrade and get on the air waves with out the help of ELMERS or any others.

I have found the members of TARC, as well as all in the Temple/Belton, and surrounding areas to be of much help over the years. I have always enjoyed talking with them on the air, as well as in person. Usually, all I have to do is ask, and someone is always ready to help, no matter what it is. My first contact was Brad Koehl, N5LJG. This was just a simple start to a long lived friendship, with Brad, and several others he introduced me to. Charlie N5TD, has given some "long dx" help on a few occasions when I have had questions, or trouble here in the shack. Steve, NU5D has spent a bit of time talking to a few of us over this way, offered suggestions, and may have shown up to help on an occasion or two. I have always been and felt welcome to join the weekly Nets. Now, I do not live near the Temple area, but as I said, I have always been able to get help. As with any group, I am sure there are the "sub-groups", but from my end, I do not see them. I am very pleased and proud of these fine folks, and all they have done for me, and many others and the way they have moved the service forward.

Subject: Mars will look as large as the full moon to the naked eye.

FYI... Something to share with friends, family, kids and grandkids!

Mars

The Red Planet is about to be spectacular!

This month and next, Earth is catching up with Mars in an encounter that
will culminate in the closest approach between the two planets in
recorded history. The next time Mars may come this close is
in 2287. Due to the way Jupiter's gravity tugs on
Mars and perturbs its orbit, astronomers can only be
certain that Mars has not come this close to Earth
in the Last 5,000 years, but it may be as long as
60,000 years before it happens again.

The encounter will culminate on August 27th when
Mars comes to within 34,649,589 miles of Earth and
will be (next to the moon) the brightest object in
the night sky. It will attain a magnitude of -2.9
and will appear 25.11 arc seconds wide. At a modest
75-power magnification

Mars will look as large as the full moon to the naked eye.

Mars will be easy to spot. At the
beginning of August it will rise in the east at 10p.m.

and reach its azimuth at about 3 a.m.

By the end of August when the two planets are
closest, Mars will rise at nightfall and reach its
highest point in the sky at 12:30a.m. That's pretty
convenient to see something that no human being has
seen in recorded history. So, mark your calendar at
the beginning of August to see Mars grow
progressively brighter and brighter throughout the
month.

Share this with your children and grandchildren.

NO ONE ALIVE TODAY WILL EVER SEE THIS AGAIN

Subject: [CTDXCC] Please help us stop BPL bill in Texas

Broadband internet over power lines has been proven to radiate harmful interference to HF radio licensed users, polluting the entire radio spectrum from 1.8-30 megahertz. We're very concerned here in Texas, because our governor has a bill on his desk for telecom that includes BPL in Chapter 43 of Senate Bill 5/House Bill 13 (pasted below). He could sign it into law by the end of this week. The bill does say in 43.152 that the BPL providers must abide by FCC regulations regarding interference. This is mostly worthless, since our FCC enforcement bureau is under staffed, slow, weak and ineffective. It would sure help to have folks from all over the world advise our Governor they are aware of this horrible TX legislation and hope he does the right thing and veto it.

Please post a message on his web site:
http://www.governor.state.tx.us/contact/#contactinfo

Please pass this on right away to as many people as you can.

okay. i sent my two cents worth. i'm sure it would have a lot more effect if accompanied by a SUBSTANTIAL campaign contribution, but what the heck. i think i have the facts mostly (politically) correct.

http://www.governor.state.tx.us/contact

Dear Governor Perry,

First, let me assure you that you received my vote in the last election, but I will have to vote for another party if your announced candidate from Austin should somehow win the next nomination.

I am really writing you about a different matter: please reject SB5. I understand that power companies will be using consumer electric revenues to fund construction and operation of Broadband over Power Line (BPL) systems, largely without regulation. Utility bills continue to rise rapidly enough due to energy costs without asking your hard-working constituents to fund the utility companies' speculative investment in BPL. There are other ways to bring the internet to rural areas of Texas, and power companies should concentrate on the business of generating and delivering energy to Texans.

I am also an electrical engineer, an amateur radio operator, and a consultant to business radio systems. BPL WILL interfere with other valuable communication services without remedy. The FCC, in my opinion, does not have the staff (if even the motivation) to ensure otherwise.

Thank you for your consideration!

1548. SORRY for any problems

Yahoo group: Temple_ARC
Date: 2005-08-17 17:21:50 UTC
From: Harold Bates
Topic: 1548 Message: 1548

I was so wrong about the MARS thing, coming close to earth. I should have found out before I sent it to you'll.
SORRY, for any inconvience.
Harold Bates/ kb5sxv

Claim: The planet Mars will make a once-in-our-lifetimes remarkably close approach to Earth in August.

Status: Multiple:
a.. Mars passed extraordinarily close to Earth in August 2003: True.

b.. Mars will pass extraordinarily close to Earth in August 2005: False.

c.. Mars will pass close to Earth in October 2005: True.
Example: [Collected on the Internet, 2003]

1549. Ham Radio Classes Cancelled

Yahoo group: Temple_ARC
Date: 2005-08-17 17:38:45 UTC
From: Charlie Schlieper
Topic: 1549 Message: 1549

Due to the fact that NO ONE registered for the August 23rd Ham
Radio Classes, a decision has been made to cancel the classes.
This is the first time in many years I have seen this happen,
but a noticeable decline in people wanting to UPGRADE was
apparent. I suspect the FCC changes proposed for Ham Radio
has impacted this situation.

Additional Note:
(Unless something changes, it appears that TARC will not be
offering VE Testing at the next BELTON EXPO, October 1st.)

73,
Charlie Schlieper, N5TD

From: WR1TX
Topic: 1549 Message: 1550

I believe that a wait-and-see mindset has now definitely taken place due to the FCC?s NPRM concerning Amateur Radio. I wouldn?t give up the VE testing for Ham Expo, however. Go ahead and do the VE testing this time, and then reevaluate that situation afterwards.

I can certainly understand the cancellation of the classes due to the reasons you describe.

Warren Rowe / WR1TX
Temple, Texas

Hi. Charlie
Do you know if there will be VE testing at the Ham
expo in Oct. I have been working with a couple of
pepole on the Tech. class. If so I will try to hve
them ready to take the test by then.
Thanks Shen

Shen,

I am NOT the official word on "VE Testing", but to the
best of my knowledge, it does not look good at this time.
I suggest you contact either Darwin or Mike LeFan to see
if any update or changes have taken place on this matter.
Darwin is k5doa@... and Mike is mlefan@... .

Hi Charlie
Thanks for the information. One of the dispatchers
at the in Falls county has my study guides and is
working on getting ready for the VE testing. The
second is my uncles grandson in Troy he asked me about
any up coming classes.
I will try to catch you on the air on the way
home.
Thanks Shen

Why should this be so surprising. When you have a lack of intrest in things
and cant get help I can truly understand why so many people are going to FRS
and Cell PHONES.

1560. Views from an outsider

Yahoo group: Temple_ARC
Date: 2005-08-18 02:47:19 UTC
From: dewrell@sbcglobal.net
Topic: 1560 Message: 1560

Everyone one else has put their 2 cents in so I figured why not me.

I received my licenses in 1997. I wanted to get it for just one reason. Emergency communications and storm spotting.

I had no intention or desire to upgrade and still do not.

You would be surprised (are maybe not) at the amount of criticism I take for that position from many of the old timers.

The attitude of "If you do not learn code and upgrade then you're not really a ham" is very prevalent among the hobbies older generation.

Not only that, but in my experience many of the older hams wear their feelings on their sleeves. If someone disagrees with them, or

does something that was not done the way they would do it then look out because here comes the backbiting.

I experienced this first hand as the Vice President and then the President of TARC several years ago.

Specifically in the Emergency Communications area of the hobby, I have seen people who do not participate as a service to the community but rather as way

To get glory and honor for themselves. You can usually tell the ones that do this by every other word that comes out of their mouths being "I". I did.. I can.

I am... I have...

I even had one be so bold to say the only reason he was involved at all was so he could earn a Presidential Citation Award.

I agree that the Amateur Radio hobby is in trouble. But I do not think it is because it has outlived it's usefulness. I believe there is still a need and very vital job in emergency communications for amateur radio to fill even right here in Bell County. It was not so long ago that a single lightning strike took out all communications and who came to the rescue?

So what is killing Amateur Radio? In my opinion its attitude. Simply the pride, arrogance, and laziness of its current members.

Those that are to prideful that they can not work together as a team to reach a common goal. It's their way or no way. If I can't have it may way, I will take my ball and go home.

Those that are so arrogant that they think God put them on this earth to be the super ham. They are the best at everything and by God you better not challenge them on anything. As we said above you can notice this group easily, just listen for the I's, I am, I can, I did, I have....

And those that are just plain lazy. They will complain about every little thing but will do NOTHING to change it. They do not get involved. They do not participate.

As I said above, I met many of these during my time as Vice President and then President of TARC.

Nothing will suck the enthusiasm out of a new ham faster than running into someone that meets one of the above descriptions.

Many of you know I was once very active in the local Ham communities. Simply because of the things I described, it stopped being fun. I sold everything and had nothing to do with Amateur radio for years. Recently I found I missed the old days and decided I was going to get back into amateur radio and enjoy it in spite of those described above.

I hope things change. I remember a day when you could get on .82 and ID and their would be 3 or 4 people come back just to say high. Now 90% of the time, the frequency is silent. I remember a time when sever weather came in, we had 10 or 12 mobile spotters out, hams at the TV stations, Hams running net controls, etc. Now if you can find more than 2 people on .82 during severe weather that are willing to actually go out and storm spot it's a miracle. I remember a time when the "ARRL Special Services" designation for a club actually applied. I think it would be good for everyone to go to http://www.arrl.org/FandES/field/club/forms/fsd7/index.html and get a reminder of what that means.

How to fix it? (In my opinion)

1. Realize you are not perfect and while you are it realize neither is anyone else so stop being so critical.
2. If someone hurt your feelings, get over it! How old are you!
3. For those of you who have the "I" problem, you know, I can, I am, I did, I have, etc.You know who you are!
Wake up and smell the coffee. It is not all about you!. If you live to be patted on the back and told how great you are, find a new hobby to destroy.
4. Hey, remember what your momma always told you, "Play Nice!" You do not have to like someone to work together for a common good.
5. Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them! :-))

Now I realize that everything above is "My Opinion" and we all know opinions are like armpits. Everyone has two and they usually both stink, but I felt the need to share. :-)

Gary

Subject: Mars will look as large as the full moon to the naked eye.

FYI... Something to share with friends, family, kids and grandkids!

Mars

The Red Planet is about to be spectacular!

This month and next, Earth is catching up with Mars in an encounter that
will culminate in the closest approach between the two planets in recorded history. The next time Mars may come this close is in 2287. Due to the way Jupiter's gravity tugs on Mars and perturbs its orbit, astronomers can only be certain that Mars has not come this close to Earth in the Last 5,000 years, but it may be as long as 60,000 years before it happens again.

The encounter will culminate on August 27th when Mars comes to within 34,649,589 miles of Earth and will be (next to the moon) the brightest object in the night sky. It will attain a magnitude of -2.9 and will appear 25.11 arc seconds wide. At a modest 75-power magnification

Mars will look as large as the full moon to the naked eye.

Mars will be easy to spot. At the beginning of August it will rise in the east at 10p.m.

and reach its azimuth at about 3 a.m.

By the end of August when the two planets are closest, Mars will rise at nightfall and reach its highest point in the sky at 12:30a.m. That's pretty convenient to see something that no human being has seen in recorded history. So, mark your calendar at the beginning of August to see Mars grow progressively brighter and brighter throughout the month.

Share this with your children and grandchildren.

NO ONE ALIVE TODAY WILL EVER SEE THIS AGAIN

Topic: 1560 Message: 1564

Here is my take on your comments, Gary.

Everyone one else has put their 2 cents in so I figured why not me.
I received my licenses in 1997. I wanted to get it for just one reason.
Emergency communications and storm spotting.
I had no intention or desire to upgrade and still do not.

You would be surprised (are maybe not) at the amount of criticism I take for that position from many of the old timers.
The attitude of "If you do not learn code and upgrade then you're not really a ham" is very prevalent among the hobbies older generation.
Not only that, but in my experience many of the older hams wear their feelings on their sleeves. If someone disagrees with them, or does something that was not done the way they would do it then look out because here comes the backbiting.
I experienced this first hand as the Vice President and then the President of TARC several years ago.

It's true that there is some serious backbiting from among the older hams about CW. Take a look at the postings on eHam.net, QRZ.com and other similar sites. It's getting to the point that if those people were all in a backroom of a bar and began discussed the code-no code issue, a drunken brawl would ensue. We are above that, I would believe. There's plenty of room in our wonderful hobby to do whatever we want to do!

Specifically in the Emergency Communications area of the hobby, I have seen people who do not participate as a service to the community but rather as way
To get glory and honor for themselves. You can usually tell the ones that do this by every other word that comes out of their mouths being "I". I did.. I can.
I am... I have...
I even had one be so bold to say the only reason he was involved at all was so he could earn a Presidential Citation Award.

It's still that way for some people here. There have been many hams, myself included, who had to leave the emergency communications realm of the hobby due to issues like what you describe and more. Yes, there have been differences of opinion about things in the emergency communications arena, but the true belief was and still is to serve the general public and not to play politics. It can't be done with all the backstabbing. We need to work together here; can't we agree on that?

I agree that the Amateur Radio hobby is in trouble. But I do not think it is because it has outlived it's usefulness. I believe there is still a need and very vital job in emergency communications for amateur radio to fill even

right here in Bell County. It was not so long ago that a single lightning strike took out all communications and who came to the rescue?

So what is killing Amateur Radio? In my opinion its attitude. Simply the pride, arrogance, and laziness of its current members.

Those that are to prideful that they can not work together as a team to reach a common goal. It's their way or no way. If I can't have it may way, I will take my ball and go home.

Look around, everyone. Gary's right.

Those that are so arrogant that they think God put them on this earth to be the super ham. They are the best at everything and by God you better not challenge them on anything. As we said above you can notice this group easily, just listen for the I's, I am, I can, I did, I have....

And those that are just plain lazy. They will complain about every little thing but will do NOTHING to change it. They do not get involved. They do not participate.
As I said above, I met many of these during my time as Vice President and then President of TARC.

Nothing will suck the enthusiasm out of a new ham faster than running into someone that meets one of the above descriptions.

Another note here. My XYL is a licensed ham, but will not get on the air locally due to the problems that some have fostered with politics, complaining, you name it. It's bad enough that there are many that will not get on the air anymore due to these problems, but when it is a female ham (of which we really need many more to get on the air or get licensed, period) that sees what is happening and refuses to be active.well, then, we really have a problem. The same situation applies for the youth of Central Texas; what about them???

Many of you know I was once very active in the local Ham communities. Simply because of the things I described, it stopped being fun. I sold everything and had nothing to do with Amateur radio for years. Recently I found I missed the old days and decided I was going to get back into amateur radio and enjoy it in spite of those described above.

I hope things change. I remember a day when you could get on .82 and ID and their would be 3 or 4 people come back just to say high. Now 90% of the time, the frequency is silent. I remember a time when sever weather came in, we had 10 or 12 mobile spotters out, hams at the TV stations, Hams running net controls, etc. Now if you can find more than 2 people on .82 during severe weather that are willing to actually go out and storm spot it's a miracle. I remember a time when the "ARRL Special Services" designation for a club actually applied. I think it would be good for everyone to go to http://www.arrl.org/FandES/field/club/forms/fsd7/index.html and get a reminder of what that means.

I think it can happen again, Gary; a lot of work is needed to get there, though.

How to fix it? (In my opinion)

1. Realize you are not perfect and while you are it realize neither is anyone else so stop being so critical.
2. If someone hurt your feelings, get over it! How old are you!
3. For those of you who have the "I" problem, you know, I can, I am, I did, I have, etc.You know who you are!
Wake up and smell the coffee. It is not all about you!. If you live to be patted on the back and told how great you are, find a new hobby to destroy.
4. Hey, remember what your momma always told you, "Play Nice!" You do not have to like someone to work together for a common good.
5. Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them! :-))

Now I realize that everything above is "My Opinion" and we all know opinions are like armpits. Everyone has two and they usually both stink, but I felt the need to share. :-)

No argument, Gary. Maybe others will realize this and have the guts to say what you did. I'm with you all the way.

Reminder from the Calendar of Temple_ARC
http://groups.yahoo.com/group/Temple_ARC/cal

CenTex Storm Spotters Group Weekly Net
Thursday August 18, 2005
7:00 pm - 8:00 pm
(This event repeats every week.)
Event Location: Lampasas Texas
Street: Yahoo Groups - CenTexStormSpottersGroup
City, State, Zip: Lampasas Tx 76550
Phone: 254-458-8112 Tommie / 512-556-4730 Harold

Notes:
Net is held in Echolink node# 28821 and *WX_TALK* node# 7203.
Local repeaters in and around Lampasas, Killeen, belton and Temple on the following Freq's:
Lampasas, Tx - 145.330- 162.2T / 444.875+ 88.5T
Stephenville - TBA
Abilieen, TX - TBA
Beltom - NU5D 146.720 88.5T

Set up birthday reminders!

1567. RE: [Temple_ARC] ARRL Spectrum Defense Fund

Yahoo group: Temple_ARC
Date: 2005-08-18 13:01:13 UTC
From: n5zxj@arrl.net
Topic: 1525 Message: 1567

I read the notes from Steve NU5D, and Gary KD5ABQ, and I am going to give my 2 cents to this also.

Gary, I strongly agree with your statement! You hit it dead on the head.

I see and hear, still to the very day many of the things that Gary speaks about.

And also the comments that Charlie N5TD, posted about no VEC test session at our Belton Hamfest. I don't see why the VEC test session should be canceled, unless our VEC team finds that the testing of possible new hams or current hams that want to upgrade is un-necessary for the advancement of our hobby??. I don't remember the head count for the test session, though I do remember that there were many people that did test at each session at the last 3 or 4 hamfest.

There is a billboard up right now in Waco near Baylor that says "There is no "I" in team".

I also find it amusing that Steve, NU5D, starts off his note on eliminating 'divisiveness in our club' by taking pot shots at several groups of hams that pursue interests other than his.

Perhaps he should read again, the first couple of paragraphs in the Part 97 rules governing Amateur Radio and the reason for its existence.

Then I would suggest that he read some of the back issues of QST and review the emergency activities of amateur radio in the following events.

The Jarrell Tornado and its aftermath
The 2002 Bell County Communications Center lightning hit (September 2002 QST)
The 2003 Shuttle recovery
The 2004 Florida Hurricanes
The 2004 December 26th Tsunami
The ongoing western states fires
The ongoing California disasters
The 9/11 aftermath

Not in QST but close to home:

The Georgetown Police station flood
The Pflugerville Police station outage
The S&R activities relating to the young lady that went missing at Georgetown Lake
The North Texas ice storm that downed most communications for a week (about five years ago)

I would also suggest tuning into the Hurricane Watch net on 14.325 the next time a hurricane is near landfall and the Maritime Emergency nets on 14.300 and 14.313 that have played major roles in maritime rescues and life saving events.

Bell County has emergency communications concerns since in or near us, we have:

The NAFTA Highway and its offshoot US-190, the trail to Fort Hood (Take a guess about what travels over these roads daily.)

(The most recent event of significance was an 18-wheeler spill between Georgetown and Round Rock about a month ago. Cell phones went immediately overloaded as the traffic backed up over seven miles and every one was trying to call home or looking for info.)

Fort Hood itself
Location in Tornado Alley
George Bush ranch
Major trauma center hospitals

In all of the events listed the 'Public Service' communications infrastructure failed or was not capable of covering the territory, Amateur Radio was the immediate solution.

When any or all of these other communications mediums that were spoken of fail, Amateur radio is nearly always turned to, to fill the void till commercial comms came back up

Yep, we need spectrum, but we also need to justify its use and emergency communications is that justification...

Lastly, when I took on the roll as ARES EC for Bell County, I was able, along with Joe W5VEX, Tom KG5II and a several other ham to get several Emergency Communications related projects put into place. It was all done as a TEAM effort, not an "I" project.

1. A new Wide Area Repeater for all to use. W5BEC - 147.140
2. New Dual band radios in the Bell County EOC and Bell County Health District offices.
3. The ability to have a direct connection via Ham radio (EchoLink) with the National Weather Service Office in Ft. Worth, and to include any NWS related facility. This has proven to be an important asset to NWS in the last 2 years alone.
4. A 7 County, 13 Hospital Amateur Radio Emergency Communications Project with the Region L Trauma Council.
5. Working on placing a Dual Band radio in each VFD, FD and PD. Emergency Ops Centers in each city in Bell County.

Again this is my 2 cents and my views.

Gerald
N5ZXJ
ARES EC Bell County

ARRL Life Member

Fellow Radio Amateurs,

In the matter of spending club funds to promote ham radio:

Over the last 20 or 30 years, I have seen countless people get a ham license, be active for a year or two, and then leave ham radio for something else. Some folks got ham licenses so they could use a phone patch, or talk with family members who also got their ham licenses. Some folks would get a license, buy a talkie, modify it so it would go into public safety channels, and parade around with the local police and fire blaring from their 'ham' talkies. Some folks got their ham license so they could have clear 6M frequencies for their radio control model airplanes. Some folks use ham radio around weather spotting and pseudo emergency activities to the exclusion of any other ham activities.

All of the above are indeed uses of ham radio, but many could be better served outside of ham radio. Cellular has just about negated practical use of autopatches. Also Cellular and GMRS and FRS provide personal communications between family members without having to mess with taking a license examination. Ham radio no longer provides a useful or viable backup to public safety communications with satellite communications connecting remote areas of the earth, and cells on wheels and other redundancies in the commercial arena providing restoration to public safety. There are over 3500 two way radios in our local public safety communications system. The resources available in the ham community cannot begin to handle this kind of volume of traffic. When is the last time you handled health and welfare traffic? The Mexico City earthquake in 1985??? Times have changed.

My point is that building numbers of hams through aggressive licensing practices does not necessarily build the ham community. Sheer quantity at the expense of quality is not the answer. Getting your ticket is just the entry to ham radio. From that point forward hams should grow into the hobby, learn from other hams, and contribute to the hobby. Getting an Extra Class license doesn't mean very much without the knowledge and experience achieved over time, code or no code doesn't matter. Also there is a responsibility to share this wealth of experience with newer hams.

With this in mind I think growing and fostering our own ham community and getting rid of the divisiveness in our club will do much more than throwing money at the numbers problem. Invite hams you haven't seen in a while to attend a club meeting. Have ham radio programs that are interesting. Foster activities like antenna parties, club participation in contests, Field Day, and demonstrations at our local schools. JOTA is another area where our club can shine. Get up and do something other than complain....

For these reasons I would rather send our monies in defense of spectrum, and work on growing the ham community from within our own community and in our

own community.

Steve
NU5D

Everyone one else has put their 2 cents in so I figured why not me.

I received my licenses in 1997. I wanted to get it for just one reason. Emergency communications and storm spotting.

I had no intention or desire to upgrade and still do not.

You would be surprised (are maybe not) at the amount of criticism I take for that position from many of the old timers.

The attitude of "If you do not learn code and upgrade then you're not really a ham" is very prevalent among the hobbies older generation.

Not only that, but in my experience many of the older hams wear their feelings on their sleeves. If someone disagrees with them, or

does something that was not done the way they would do it then look out because here comes the backbiting.

I experienced this first hand as the Vice President and then the President of TARC several years ago.

Specifically in the Emergency Communications area of the hobby, I have seen people who do not participate as a service to the community but rather as way

To get glory and honor for themselves. You can usually tell the ones that do this by every other word that comes out of their mouths being "I". I did.. I can. I am... I have...

I even had one be so bold to say the only reason he was involved at all was so he could earn a Presidential Citation Award.

I agree that the Amateur Radio hobby is in trouble. But I do not think it is because it has outlived it's usefulness. I believe there is still a need and very vital job in emergency communications for amateur radio to fill even right here in Bell County. It was not so long ago that a single lightning strike took out all communications and who came to the rescue?

So what is killing Amateur Radio? In my opinion its attitude. Simply the pride, arrogance, and laziness of its current members.

Those that are to prideful that they can not work together as a team to reach a common goal. It's their way or no way. If I can't have it may way, I will take my ball and go home.

Those that are so arrogant that they think God put them on this earth to be the super ham. They are the best at everything and by God you better not challenge them on anything. As we said above you can notice this group easily, just listen for the I's, I am, I can, I did, I have....

And those that are just plain lazy. They will complain about every little thing but will do NOTHING to change it. They do not get involved. They do not participate.

As I said above, I met many of these during my time as Vice President and then President of TARC.

Nothing will suck the enthusiasm out of a new ham faster than running into someone that meets one of the above descriptions.

Many of you know I was once very active in the local Ham communities. Simply because of the things I described, it stopped being fun. I sold everything and had nothing to do with Amateur radio for years. Recently I found I missed the old days and decided I was going to get back into amateur radio and enjoy it in spite of those described above.

I hope things change. I remember a day when you could get on .82 and ID and their would be 3 or 4 people come back just to say high. Now 90% of the time, the frequency is silent. I remember a time when sever weather came in, we had 10 or 12 mobile spotters out, hams at the TV stations, Hams running net controls, etc. Now if you can find more than 2 people on .82 during severe weather that are willing to actually go out and storm spot it's a miracle. I remember a time when the "ARRL Special Services" designation for a club actually applied. I think it would be good for everyone to go to http://www.arrl.org/FandES/field/club/forms/fsd7/index.html and get a reminder of what that means.

How to fix it? (In my opinion)

1. Realize you are not perfect and while you are it realize neither is anyone else so stop being so critical.
2. If someone hurt your feelings, get over it! How old are you!
3. For those of you who have the "I" problem, you know, I can, I am, I did, I have, etc.You know who you are!
Wake up and smell the coffee. It is not all about you!. If you live to be patted on the back and told how great you are, find a new hobby to destroy.
4. Hey, remember what your momma always told you, "Play Nice!" You do not have to like someone to work together for a common good.
5. Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them! :-))

Now I realize that everything above is "My Opinion" and we all know opinions are like armpits. Everyone has two and they usually both stink, but I felt the need to share. :-)

Gerald, I am glad you agree with me but I think you missed the main point. We need to try and get along.

Naming names and singling people out for criticism does nothing to help the problem.

My email was not intended as an attack against anybody but rather is intended to generate frank, honest discussion of what is wrong today in the Ham Radio Community. It is important that we do not start playing the blame game and work together to resolve this issues.

I hope everyone understands this, and will engage in non-confrontational discussions on the subject.

Gary

1572. Re: [Temple_ARC] ARRL Spectrum Defense Fund

Yahoo group: Temple_ARC
Date: 2005-08-18 21:29:21 UTC
From: Kay Schlieper
Topic: 1525 Message: 1572

To all concerned:

Charlie has been very dedicated toward helping other Hams
and has given his time to teach and Elmer others for a long
time.

He did not have anything to do with the possible change in
VE Test session, and if you go back and read his messages,
you will see what he said.

Charlie sent a note stating . . .
"Unless something changes, it appears that . . . " as he was
just trying to give a "heads-up" to the possibility. He did
this
after receiving an e-mail from the TARC president, which said
"I'm OK with not doing a VE session this time". That, plus
several other indicators, gave a distinct impression that there
might not be one this time.

In a follow-up email, Charlie also said . . .

" I am NOT the official word on "VE Testing", but to the
best of my knowledge, it does not look good at this time.
I suggest you contact either Darwin or Mike LeFan to see
if any update or changes have taken place on this matter.
Darwin is k5doa@... and Mike is mlefan@... "

Kay

1573. Re: [Temple_ARC] ARRL Spectrum Defense Fund

Yahoo group: Temple_ARC
Date: 2005-08-18 22:37:22 UTC
From: Keith and Gretchen George
Topic: 1525 Message: 1573

Well Gary- feel free to ask me what I think- You are right- it is an issue, but I feel that we can overcome and get more folks- especially young folks involved- I am 45, and one of the youngest ones there!! we need to find ways to get these folks started- but then we need to keep them up and excited. when I got my tech license, I was fired up, and ready to run. But no one really came to me and gave the beginner tips and followed up. So I fell from the club, But my desire to work during storms, as well as Charlie and his wonderful wife Kay , visited with me, and I decided to stay with the club. make no mistake- There are some wonderful, smart, and caring folks in the club. And this can be a fun hobby. If we work on the basics of HAM, and make the beginners like me more comfortable with the radios, they will more likely to stay, and others folks would get their license, Just my 2 cents. Again- NO ONE person can be blamed, Times have changed- This is going to have to be "marketed" different- to youth involved. And yep no I in team- But there will be no team if we don't mentor, support, and follow up with the beginners either.

Gerald, I am glad you agree with me but I think you missed the main point. We need to try and get along.

Naming names and singling people out for criticism does nothing to help the problem.

My email was not intended as an attack against anybody but rather is intended to generate frank, honest discussion of what is wrong today in the Ham Radio Community. It is important that we do not start playing the blame game and work together to resolve this issues.

I hope everyone understands this, and will engage in non-confrontational discussions on the subject.

Gary

Subject: RE: [Temple_ARC] ARRL Spectrum Defense Fund

I read the notes from Steve NU5D, and Gary KD5ABQ, and I am going to give
my 2 cents to this also.

Gary, I strongly agree with your statement! You hit it dead on the head.

I see and hear, still to the very day many of the things that Gary speaks about.

And also the comments that Charlie N5TD, posted about no VEC test session at our Belton Hamfest. I don't see why the VEC test session should be canceled, unless our VEC team finds that the testing of possible new hams or current hams that want to upgrade is un-necessary for the advancement of our hobby??. I don't remember the head count for the test session, though I do remember that there were many people that did test at each session at the last 3 or 4 hamfest.

There is a billboard up right now in Waco near Baylor that says "There is no "I" in team".

I also find it amusing that Steve, NU5D, starts off his note on eliminating 'divisiveness in our club' by taking pot shots at several groups of hams that pursue interests other than his.

Perhaps he should read again, the first couple of paragraphs in the Part 97 rules governing Amateur Radio and the reason for its existence.

Then I would suggest that he read some of the back issues of QST and review the emergency activities of amateur radio in the following events.

The Jarrell Tornado and its aftermath
The 2002 Bell County Communications Center lightning hit (September 2002 QST)
The 2003 Shuttle recovery
The 2004 Florida Hurricanes
The 2004 December 26th Tsunami
The ongoing western states fires
The ongoing California disasters
The 9/11 aftermath

Not in QST but close to home:

The Georgetown Police station flood
The Pflugerville Police station outage
The S&R activities relating to the young lady that went missing at Georgetown Lake
The North Texas ice storm that downed most communications for a week (about five years ago)

I would also suggest tuning into the Hurricane Watch net on 14.325 the next time a hurricane is near landfall and the Maritime Emergency nets on 14.300 and 14.313 that have played major roles in maritime rescues and life saving events.

Bell County has emergency communications concerns since in or near us, we have:

The NAFTA Highway and its offshoot US-190, the trail to Fort Hood (Take a guess about what travels over these roads daily.)

(The most recent event of significance was an 18-wheeler spill between Georgetown and Round Rock about a month ago. Cell phones went immediately overloaded as the traffic backed up over seven miles and every one was trying to call home or looking for info.)

Fort Hood itself
Location in Tornado Alley
George Bush ranch
Major trauma center hospitals

In all of the events listed the 'Public Service' communications infrastructure failed or was not capable of covering the territory, Amateur Radio was the immediate solution.

When any or all of these other communications mediums that were spoken of fail, Amateur radio is nearly always turned to, to fill the void till commercial comms came back up

Yep, we need spectrum, but we also need to justify its use and emergency communications is that justification...

Lastly, when I took on the roll as ARES EC for Bell County, I was able, along with Joe W5VEX, Tom KG5II and a several other ham to get several Emergency Communications related projects put into place. It was all done as a TEAM effort, not an "I" project.

1. A new Wide Area Repeater for all to use. W5BEC - 147.140
2. New Dual band radios in the Bell County EOC and Bell County Health District offices.
3. The ability to have a direct connection via Ham radio (EchoLink) with the National Weather Service Office in Ft. Worth, and to include any NWS related facility. This has proven to be an important asset to NWS in the last 2 years alone.
4. A 7 County, 13 Hospital Amateur Radio Emergency Communications Project with the Region L Trauma Council.
5. Working on placing a Dual Band radio in each VFD, FD and PD. Emergency Ops Centers in each city in Bell County.

Again this is my 2 cents and my views.

Gerald
N5ZXJ
ARES EC Bell County
ARRL Life Member

Fellow Radio Amateurs,

In the matter of spending club funds to promote ham radio:

Over the last 20 or 30 years, I have seen countless people get a ham license, be active for a year or two, and then leave ham radio for something

else. Some folks got ham licenses so they could use a phone patch, or talk with family members who also got their ham licenses. Some folks would get a license, buy a talkie, modify it so it would go into public safety channels, and parade around with the local police and fire blaring from their 'ham' talkies. Some folks got their ham license so they could have clear 6M frequencies for their radio control model airplanes. Some folks use ham radio around weather spotting and pseudo emergency activities to the exclusion of any other ham activities.

All of the above are indeed uses of ham radio, but many could be better served outside of ham radio. Cellular has just about negated practical use of autopatches. Also Cellular and GMRS and FRS provide personal communications between family members without having to mess with taking a license examination. Ham radio no longer provides a useful or viable backup to public safety communications with satellite communications connecting remote areas of the earth, and cells on wheels and other redundancies in the commercial arena providing restoration to public safety. There are over 3500 two way radios in our local public safety communications system. The resources available in the ham community cannot begin to handle this kind of volume of traffic. When is the last time you handled health and welfare traffic? The Mexico City earthquake in 1985??? Times have changed.

My point is that building numbers of hams through aggressive licensing practices does not necessarily build the ham community. Sheer quantity at the expense of quality is not the answer. Getting your ticket is just the entry to ham radio. From that point forward hams should grow into the hobby, learn from other hams, and contribute to the hobby. Getting an Extra Class license doesn't mean very much without the knowledge and experience achieved over time, code or no code doesn't matter. Also there is a responsibility to share this wealth of experience with newer hams.

With this in mind I think growing and fostering our own ham community and getting rid of the divisiveness in our club will do much more than throwing money at the numbers problem. Invite hams you haven't seen in a while to attend a club meeting. Have ham radio programs that are interesting. Foster activities like antenna parties, club participation in contests, Field Day, and demonstrations at our local schools. JOTA is another area where our club can shine. Get up and do something other than complain....

For these reasons I would rather send our monies in defense of spectrum, and work on growing the ham community from within our own community and in our own community.

Steve
NU5D

Everyone one else has put their 2 cents in so I figured why not me.

I received my licenses in 1997. I wanted to get it for just one reason. Emergency communications and storm spotting.

I had no intention or desire to upgrade and still do not.

You would be surprised (are maybe not) at the amount of criticism I take for that position from many of the old timers.

The attitude of "If you do not learn code and upgrade then you're not really a ham" is very prevalent among the hobbies older generation.

Not only that, but in my experience many of the older hams wear their feelings on their sleeves. If someone disagrees with them, or

does something that was not done the way they would do it then look out because here comes the backbiting.

I experienced this first hand as the Vice President and then the President of TARC several years ago.

Specifically in the Emergency Communications area of the hobby, I have seen people who do not participate as a service to the community but rather as way

To get glory and honor for themselves. You can usually tell the ones that do this by every other word that comes out of their mouths being "I". I did.. I can. I am... I have...

I even had one be so bold to say the only reason he was involved at all was so he could earn a Presidential Citation Award.

I agree that the Amateur Radio hobby is in trouble. But I do not think it is because it has outlived it's usefulness. I believe there is still a need and very vital job in emergency communications for amateur radio to fill even right here in Bell County. It was not so long ago that a single lightning strike took out all communications and who came to the rescue?

So what is killing Amateur Radio? In my opinion its attitude. Simply the pride, arrogance, and laziness of its current members.

Those that are to prideful that they can not work together as a team to reach a common goal. It's their way or no way. If I can't have it may way, I will take my ball and go home.

Those that are so arrogant that they think God put them on this earth to be the super ham. They are the best at everything and by God you better not challenge them on anything. As we said above you can notice this group easily, just listen for the I's, I am, I can, I did, I have....

And those that are just plain lazy. They will complain about every little thing but will do NOTHING to change it. They do not get involved. They do not participate.

As I said above, I met many of these during my time as Vice President and then President of TARC.

Nothing will suck the enthusiasm out of a new ham faster than running into someone that meets one of the above descriptions.

Many of you know I was once very active in the local Ham communities. Simply because of the things I described, it stopped being fun. I sold everything and had nothing to do with Amateur radio for years. Recently I found I missed the old days and decided I was going to get back into amateur radio and enjoy it in spite of those described above.

I hope things change. I remember a day when you could get on .82 and ID and their would be 3 or 4 people come back just to say high. Now 90% of the time, the frequency is silent. I remember a time when sever weather came in, we had 10 or 12 mobile spotters out, hams at the TV stations, Hams running net controls, etc. Now if you can find more than 2 people on .82 during severe weather that are willing to actually go out and storm spot it's a miracle. I remember a time when the "ARRL Special Services" designation for a club actually applied. I think it would be good for everyone to go to http://www.arrl.org/FandES/field/club/forms/fsd7/index.html and get a reminder of what that means.

How to fix it? (In my opinion)

1. Realize you are not perfect and while you are it realize neither is anyone else so stop being so critical.
2. If someone hurt your feelings, get over it! How old are you!
3. For those of you who have the "I" problem, you know, I can, I am, I did, I have, etc.You know who you are!
Wake up and smell the coffee. It is not all about you!. If you live to be patted on the back and told how great you are, find a new hobby to destroy.
4. Hey, remember what your momma always told you, "Play Nice!" You do not have to like someone to work together for a common good.
5. Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them! :-))

Now I realize that everything above is "My Opinion" and we all know opinions are like armpits. Everyone has two and they usually both stink, but I felt the need to share. :-)

Gary

Well said. Please don't misunderstand my email, we do have some great hams in the area that will go out of their way to help. Charlie is probably one of the best known and has helped many new hams in the area. And he has a really cool radio room also :-)

Not sure why Kay puts up with him but that is a whole other topic.

Gary

Subject: Re: [Temple_ARC] ARRL Spectrum Defense Fund

Well Gary- feel free to ask me what I think- You are right- it is an issue, but I feel that we can overcome and get more folks- especially young folks involved- I am 45, and one of the youngest ones there!! we need to find ways to get these folks started- but then we need to keep them up and excited. when I got my tech license, I was fired up, and ready to run. But no one really came to me and gave the beginner tips and followed up. So I fell from the club, But my desire to work during storms, as well as Charlie and his wonderful wife Kay , visited with me, and I decided to stay with the club. make no mistake- There are some wonderful, smart, and caring folks in the club. And this can be a fun hobby. If we work on the basics of HAM, and make the beginners like me more comfortable with the radios, they will more likely to stay, and others folks would get their license, Just my 2 cents. Again- NO ONE person can be blamed, Times have changed- This is going to have to be "marketed" different- to youth involved. And yep no I in team- But there will be no team if we don't mentor, support, and follow up with the beginners either.

Gerald, I am glad you agree with me but I think you missed the main point. We need to try and get along.

Naming names and singling people out for criticism does nothing to help the problem.

My email was not intended as an attack against anybody but rather is intended to generate frank, honest discussion of what is wrong today in the Ham Radio Community. It is important that we do not start playing the blame game and work together to resolve this issues.

I hope everyone understands this, and will engage in non-confrontational discussions on the subject.

Gary

Subject: RE: [Temple_ARC] ARRL Spectrum Defense Fund

I read the notes from Steve NU5D, and Gary KD5ABQ, and I am going to give my 2 cents to this also.

Gary, I strongly agree with your statement! You hit it dead on the head.

I see and hear, still to the very day many of the things that Gary speaks about.

And also the comments that Charlie N5TD, posted about no VEC test session at our Belton Hamfest. I don't see why the VEC test session should be canceled, unless our VEC team finds that the testing of possible new hams or current hams that want to upgrade is un-necessary for the advancement of our hobby??. I don't remember the head count for the test session, though I do remember that there were many people that did test at each session at the last 3 or 4 hamfest.

There is a billboard up right now in Waco near Baylor that says "There is no "I" in team".

I also find it amusing that Steve, NU5D, starts off his note on eliminating 'divisiveness in our club' by taking pot shots at several groups of hams that pursue interests other than his.

Perhaps he should read again, the first couple of paragraphs in the Part 97 rules governing Amateur Radio and the reason for its existence.

Then I would suggest that he read some of the back issues of QST and review the emergency activities of amateur radio in the following events.

The Jarrell Tornado and its aftermath
The 2002 Bell County Communications Center lightning hit (September 2002 QST)
The 2003 Shuttle recovery
The 2004 Florida Hurricanes
The 2004 December 26th Tsunami
The ongoing western states fires
The ongoing California disasters
The 9/11 aftermath

Not in QST but close to home:

The Georgetown Police station flood
The Pflugerville Police station outage
The S&R activities relating to the young lady that went missing at Georgetown Lake
The North Texas ice storm that downed most communications for a week (about five years ago)

I would also suggest tuning into the Hurricane Watch net on 14.325 the next time a hurricane is near landfall and the Maritime Emergency nets on 14.300 and 14.313 that have played major roles in maritime rescues and life saving events.

Bell County has emergency communications concerns since in or near us, we have:

The NAFTA Highway and its offshoot US-190, the trail to Fort Hood (Take a guess about what travels over these roads daily.)

(The most recent event of significance was an 18-wheeler spill between Georgetown and Round Rock about a month ago. Cell phones went immediately overloaded as the traffic backed up over seven miles and every one was trying to call home or looking for info.)

Fort Hood itself
Location in Tornado Alley
George Bush ranch
Major trauma center hospitals

In all of the events listed the 'Public Service' communications infrastructure failed or was not capable of covering the territory, Amateur Radio was the immediate solution.

When any or all of these other communications mediums that were spoken of fail, Amateur radio is nearly always turned to, to fill the void till commercial comms came back up

Yep, we need spectrum, but we also need to justify its use and emergency communications is that justification...

Lastly, when I took on the roll as ARES EC for Bell County, I was able, along with Joe W5VEX, Tom KG5II and a several other ham to get several Emergency Communications related projects put into place. It was all done

as a TEAM effort, not an "I" project.

1. A new Wide Area Repeater for all to use. W5BEC - 147.140
2. New Dual band radios in the Bell County EOC and Bell County Health District offices.
3. The ability to have a direct connection via Ham radio (EchoLink) with the National Weather Service Office in Ft. Worth, and to include any NWS related facility. This has proven to be an important asset to NWS in the last 2 years alone.
4. A 7 County, 13 Hospital Amateur Radio Emergency Communications Project with the Region L Trauma Council.
5. Working on placing a Dual Band radio in each VFD, FD and PD. Emergency Ops Centers in each city in Bell County.

Again this is my 2 cents and my views.

Gerald
N5ZXJ
ARES EC Bell County
ARRL Life Member

Fellow Radio Amateurs,

In the matter of spending club funds to promote ham radio:

Over the last 20 or 30 years, I have seen countless people get a ham license, be active for a year or two, and then leave ham radio for something else. Some folks got ham licenses so they could use a phone patch, or talk with family members who also got their ham licenses. Some folks would get a license, buy a talkie, modify it so it would go into public safety channels, and parade around with the local police and fire blaring from their 'ham' talkies. Some folks got their ham license so they could have clear 6M frequencies for their radio control model airplanes. Some folks use ham radio around weather spotting and pseudo emergency activities to the exclusion of any other ham activities.

All of the above are indeed uses of ham radio, but many could be better served outside of ham radio. Cellular has just about negated practical use of autopatches. Also Cellular and GMRS and FRS provide personal communications between family members without having to mess with taking a license examination. Ham radio no longer provides a useful or viable backup to public safety communications with satellite communications connecting remote areas of the earth, and cells on wheels and other redundancies in the commercial arena providing restoration to public safety. There are over 3500 two way radios in our local public safety communications system. The resources available in the ham community cannot begin to handle this kind of volume of traffic. When is the last time you handled health and welfare traffic? The Mexico City earthquake in 1985??? Times have changed.

My point is that building numbers of hams through aggressive licensing practices does not necessarily build the ham community. Sheer quantity at the expense of quality is not the answer. Getting your ticket is just the entry to ham radio. From that point forward hams should grow into the hobby, learn from other hams, and contribute to the hobby. Getting an Extra Class license doesn't mean very much without the knowledge and experience achieved over time, code or no code doesn't matter. Also there is a responsibility to share this wealth of experience with newer hams.

With this in mind I think growing and fostering our own ham community and getting rid of the divisiveness in our club will do much more than throwing money at the numbers problem. Invite hams you haven't seen in a while to attend a club meeting. Have ham radio programs that are interesting. Foster activities like antenna parties, club participation in contests, Field Day, and demonstrations at our local schools. JOTA is another area where our club can shine. Get up and do something other than complain....

For these reasons I would rather send our monies in defense of spectrum, and work on growing the ham community from within our own community and in our own community.

Steve
NU5D

Everyone one else has put their 2 cents in so I figured why not me.

I received my licenses in 1997. I wanted to get it for just one reason. Emergency communications and storm spotting.

I had no intention or desire to upgrade and still do not.

You would be surprised (are maybe not) at the amount of criticism I take for that position from many of the old timers.

The attitude of "If you do not learn code and upgrade then you're not really a ham" is very prevalent among the hobbies older generation.

Not only that, but in my experience many of the older hams wear their feelings on their sleeves. If someone disagrees with them, or

does something that was not done the way they would do it then look out because here comes the backbiting.

I experienced this first hand as the Vice President and then the President of TARC several years ago.

Specifically in the Emergency Communications area of the hobby, I have seen people who do not participate as a service to the community but rather as way

To get glory and honor for themselves. You can usually tell the ones that do this by every other word that comes out of their mouths being "I". I

did.. I can. I am... I have...

I even had one be so bold to say the only reason he was involved at all was so he could earn a Presidential Citation Award.

I agree that the Amateur Radio hobby is in trouble. But I do not think it is because it has outlived it's usefulness. I believe there is still a need and very vital job in emergency communications for amateur radio to fill even right here in Bell County. It was not so long ago that a single lightning strike took out all communications and who came to the rescue?

So what is killing Amateur Radio? In my opinion its attitude. Simply the pride, arrogance, and laziness of its current members.

Those that are to prideful that they can not work together as a team to reach a common goal. It's their way or no way. If I can't have it may way, I will take my ball and go home.

Those that are so arrogant that they think God put them on this earth to be the super ham. They are the best at everything and by God you better not challenge them on anything. As we said above you can notice this group easily, just listen for the I's, I am, I can, I did, I have....

And those that are just plain lazy. They will complain about every little thing but will do NOTHING to change it. They do not get involved. They do not participate.

As I said above, I met many of these during my time as Vice President and then President of TARC.

Nothing will suck the enthusiasm out of a new ham faster than running into someone that meets one of the above descriptions.

Many of you know I was once very active in the local Ham communities. Simply because of the things I described, it stopped being fun. I sold everything and had nothing to do with Amateur radio for years. Recently I found I missed the old days and decided I was going to get back into amateur radio and enjoy it in spite of those described above.

I hope things change. I remember a day when you could get on .82 and ID and their would be 3 or 4 people come back just to say high. Now 90% of the time, the frequency is silent. I remember a time when sever weather came in, we had 10 or 12 mobile spotters out, hams at the TV stations, Hams running net controls, etc. Now if you can find more than 2 people on .82 during severe weather that are willing to actually go out and storm spot it's a miracle. I remember a time when the "ARRL Special Services" designation for a club actually applied. I think it would be good for everyone to go to http://www.arrl.org/FandES/field/club/forms/fsd7/index.html and get a reminder of what that means.

How to fix it? (In my opinion)

1. Realize you are not perfect and while you are it realize neither
is
anyone else so stop being so critical.
2. If someone hurt your feelings, get over it! How old are you!
3. For those of you who have the "I" problem, you know, I can, I am,
I
did, I have, etc.You know who you are!
Wake up and smell the coffee. It is not all about you!. If you live to be
patted on the back and told how great you are, find a new hobby to destroy.
4. Hey, remember what your momma always told you, "Play Nice!" You do
not have to like someone to work together for a common good.
5. Guess what, times have changed and the hobby must change with it
or
go the way of the 8-Track. (I know some of you probably still have them! :-)
)

Now I realize that everything above is "My Opinion" and we all know opinions
are like armpits. Everyone has two and they usually both stink, but I felt
the need to share. :-)

Gary

Subject: Re: [Temple_ARC] ARRL Spectrum Defense Fund

To all concerned:

Charlie has been very dedicated toward helping other Hams
and has given his time to teach and Elmer others for a long
time.

He did not have anything to do with the possible change in
VE Test session, and if you go back and read his messages,
you will see what he said.

Charlie sent a note stating . . .
"Unless something changes, it appears that . . . " as he was
just trying to give a "heads-up" to the possibility. He did this
after receiving an e-mail from the TARC president, which said
"I'm OK with not doing a VE session this time". That, plus
several other indicators, gave a distinct impression that there
might not be one this time.

In a follow-up email, Charlie also said . . .

" I am NOT the official word on "VE Testing", but to the
best of my knowledge, it does not look good at this time.
I suggest you contact either Darwin or Mike LeFan to see
if any update or changes have taken place on this matter.
Darwin is k5doa@... <mailto:k5doa@...> and Mike is mlefan@...
<mailto:mlefan@...> "

Kay

You?re absolutely right, Kay. Charlie has done a lot for ham radio in our area. You name it: from helping out with emergency communications to VE testing to radio repair work to general elmering, to?well, you get the point. He?s helped me as well, and I appreciate it.

As far as the VE testing at Ham Expo is concerned, it?s clear as to what was said by Charlie. I think that more than a few people misread his quotes.

Now since when has ANY VE team ever thought that testing of possible new hams or the upgrading of current ones was unnecessary? I don?t think that there has been a single one that would ever think that way, especially given the current climate. It looks like you fell out of the tree and bruised your head on this one, Gerald.

I agree with the fact that spectrum is needed and that justification is necessary; emergency communications is an important justification, but it?s not the only one! Experimentation and general usage of our bands to a greater degree is just as important if not more so.

In reality it was a small group, or clique, that did this. Now I?ll admit that these actions are admirable, but there were many that were denied the opportunity to help with these endeavors. Those that were denied won?t discuss the matter because they don?t want to rock the boat. I don?t blame them.

> NU5D

Quality as well as quantity is important. We need to foster the improvement of the quality of our ham community locally. Do we need to focus on one area for improvement, or do we need to look at multiple facets? The latter is probably the right answer. There is so much to do in our hobby: emergency communications, DXing, satellites, digital modes (yes, including CW), repeaters, RDFing, microwaves, radio astronomy and so much more. Many of us settle into one or two of these areas of our hobby. Exposure to these other areas of our hobby is ultimately vital to the survival of ham radio itself.

The hobby that we love and adore has degenerated downward to mostly a group of complainers and whiners. I DIDN?T SAY ALL, BUT MANY OF US HAVE. Just look on eHam.net and QRZ.com as well as some other forums, and you?ll see what I mean.

Now I?ll admit that I haven?t exactly been a saint in our hobby locally myself, and for my misadventures (the vast majority of them unintentional due to listening to the wrong people) I do apologize. I do feel that we need to move forward and improve the quality of our hobby locally, and we need to start NOW. As a result, I?ve begun a new understanding and realization of what ham radio should be about, and will dedicate myself to helping others in the proper context.

If you think I?m out of line for my comments here on this thread, I?m sorry; 14 years of ham radio in various capacities as well as monitoring radio communications worldwide since the age of 12 (that?s right) should account for something. No, I?m not ?holier than thou,? but I do know and understand what I?m talking about.

Thanks to Gary for starting this entire thread. We really need to get some things straight and move forward. I?m for that, and I?m willing to jump in and do it; NU5D, N5TD, and many others within TARC and outside it are as well.

As for the naysayers, go ahead and flame; you can expect a serious and honest response, however.

Oh no! Steve at this very moment Charlie is creating the worlds largest Pee-Battery to run emergency communications!

So guys, the next time Charlie brings up the weather net and you hear a weird sound in his transmissions, that is not his radio, it's him recharging his batteries!

Gary

I wonder how much urine one would have to "create" in order to run a 100-watt HF radio for 6 hours?
It's an interesting concept!

From: Keith and Gretchen George
Topic: 1525 Message: 1584

Well one thing we could do is this- during the meetings- when we have these advanced classes, we also need to have "refresher" classes. I would like to know how to use the repeater as a phone. Just to know how to do that. I would also like to have my radios checked by an expert, and little things like that- I know from my years of motorcycling, I take things for granted, and when I have a fairly new person go riding with me, I try to give them some good basic tips on how to enjoy his ride and bike better, and most of them really enjoy that. I also joined the HAM world because of my love of storms and spotting. I have over 1,000 pictures of some incredible storms in this area from the past 5-6 years. I would like to share stuff like that at meetings, And I agree, there are some great folks there.

Well said. Please don't misunderstand my email, we do have some great hams in the area that will go out of their way to help. Charlie is probably one of the best known and has helped many new hams in the area. And he has a really cool radio room also J

Not sure why Kay puts up with him but that is a whole other topic.

Subject: Re: [Temple_ARC] ARRL Spectrum Defense Fund

Well Gary- feel free to ask me what I think- You are right- it is an issue, but I feel that we can overcome and get more folks- especially young folks involved- I am 45, and one of the youngest ones there!! we need to find ways to get these folks started- but then we need to keep them up and excited. when I got my tech license, I was fired up, and ready to run. But no one really came to me and gave the beginner tips and followed up. So I fell from the club, But my desire to work during storms, as well as Charlie and his wonderful wife Kay , visited with me, and I decided to stay with the club. make no mistake- There are some wonderful, smart, and caring folks in the club. And this can be a fun hobby. If we work on the basics of HAM, and make the beginners like me more comfortable with the radios, they will more likely to stay, and others folks would get their license, Just my 2 cents. Again- NO ONE person can be blamed, Times have changed- This is going to have to be "marketed" different- to youth involved. And yep no I in team- But there will be no team if we don't

mentor, support, and follow up with the beginners either.

Gerald, I am glad you agree with me but I think you missed the main point. We need to try and get along.

Naming names and singling people out for criticism does nothing to help the problem.

My email was not intended as an attack against anybody but rather is intended to generate frank, honest discussion of what is wrong today in the Ham Radio Community. It is important that we do not start playing the blame game and work together to resolve this issues.

I hope everyone understands this, and will engage in non-confrontational discussions on the subject.

Gary

Subject: RE: [Temple_ARC] ARRL Spectrum Defense Fund

I read the notes from Steve NU5D, and Gary KD5ABQ, and I am going to give my 2 cents to this also.

Gary, I strongly agree with your statement! You hit it dead on the head.

I see and hear, still to the very day many of the things that Gary speaks about.

And also the comments that Charlie N5TD, posted about no VEC test session at our Belton Hamfest. I don't see why the VEC test session should be canceled, unless our VEC team finds that the testing of possible new hams or current hams that want to upgrade is un-necessary for the advancement of our hobby??. I don't remember the head count for the test session, though I do remember that there were many people that did test at each session at the last 3 or 4 hamfest.

There is a billboard up right now in Waco near Baylor that says "There is no "I" in team".

I also find it amusing that Steve, NU5D, starts off his note on eliminating 'divisiveness in our club' by taking pot shots at several groups of hams that pursue interests other than his.

Perhaps he should read again, the first couple of paragraphs in the Part 97 rules governing Amateur Radio and the reason for its existence.

Then I would suggest that he read some of the back issues of QST and review the emergency activities of amateur radio in the following events.

The Jarrell Tornado and its aftermath
The 2002 Bell County Communications Center lightning hit (September 2002 QST)
The 2003 Shuttle recovery
The 2004 Florida Hurricanes
The 2004 December 26th Tsunami
The ongoing western states fires
The ongoing California disasters
The 9/11 aftermath

Not in QST but close to home:

The Georgetown Police station flood
The Pflugerville Police station outage
The S&R activities relating to the young lady that went missing at Georgetown Lake
The North Texas ice storm that downed most communications for a week (about five years ago)

I would also suggest tuning into the Hurricane Watch net on 14.325 the next time a hurricane is near landfall and the Maritime Emergency nets on 14.300 and 14.313 that have played major roles in maritime rescues and life saving events.

Bell County has emergency communications concerns since in or near us, we have:

The NAFTA Highway and its offshoot US-190, the trail to Fort Hood (Take a guess about what travels over these roads daily.)

(The most recent event of significance was an 18-wheeler spill between Georgetown and Round Rock about a month ago. Cell phones went immediately overloaded as the traffic backed up over seven miles and every one was trying to call home or looking for info.)

Fort Hood itself
Location in Tornado Alley
George Bush ranch
Major trauma center hospitals

In all of the events listed the 'Public Service' communications infrastructure failed or was not capable of covering the territory, Amateur Radio was the immediate solution.

When any or all of these other communications mediums that were spoken of fail, Amateur radio is nearly always turned to, to fill the void till commercial comms came back up

Yep, we need spectrum, but we also need to justify its use and emergency communications is that justification...

Lastly, when I took on the roll as ARES EC for Bell County, I was able, along with Joe W5VEX, Tom KG5II and a several other ham to get several Emergency Communications related projects put into place. It was all done as a TEAM effort, not an "I" project.

1. A new Wide Area Repeater for all to use. W5BEC - 147.140
2. New Dual band radios in the Bell County EOC and Bell County Health District offices.
3. The ability to have a direct connection via Ham radio (EchoLink) with the National Weather Service Office in Ft. Worth, and to include any NWS related facility. This has proven to be an important asset to NWS in the last 2 years alone.
4. A 7 County, 13 Hospital Amateur Radio Emergency Communications Project with the Region L Trauma Council.
5. Working on placing a Dual Band radio in each VFD, FD and PD. Emergency Ops Centers in each city in Bell County.

Again this is my 2 cents and my views.

Gerald
N5ZXJ
ARES EC Bell County
ARRL Life Member

Fellow Radio Amateurs,

In the matter of spending club funds to promote ham radio:

Over the last 20 or 30 years, I have seen countless people get a ham license, be active for a year or two, and then leave ham radio for something else. Some folks got ham licenses so they could use a phone patch, or talk with family members who also got their ham licenses. Some folks would get a license, buy a talkie, modify it so it would go into public safety channels, and parade around with the local police and fire blaring from their 'ham' talkies. Some folks got their ham license so they could have clear 6M frequencies for their radio control model airplanes. Some folks use ham radio around weather spotting and pseudo emergency activities to the exclusion of any other ham activities.

All of the above are indeed uses of ham radio, but many could be better served outside of ham radio. Cellular has just about negated practical use of autopatches. Also Cellular and GMRS and FRS provide personal communications between family members without having to mess with taking a license examination. Ham radio no longer provides a useful or viable backup

to public safety communications with satellite communications connecting remote areas of the earth, and cells on wheels and other redundancies in the commercial arena providing restoration to public safety. There are over 3500 two way radios in our local public safety communications system. The resources available in the ham community cannot begin to handle this kind of volume of traffic. When is the last time you handled health and welfare traffic? The Mexico City earthquake in 1985??? Times have changed.

My point is that building numbers of hams through aggressive licensing practices does not necessarily build the ham community. Sheer quantity at the expense of quality is not the answer. Getting your ticket is just the entry to ham radio. From that point forward hams should grow into the hobby, learn from other hams, and contribute to the hobby. Getting an Extra Class license doesn't mean very much without the knowledge and experience achieved over time, code or no code doesn't matter. Also there is a responsibility to share this wealth of experience with newer hams.

With this in mind I think growing and fostering our own ham community and getting rid of the divisiveness in our club will do much more than throwing money at the numbers problem. Invite hams you haven't seen in a while to attend a club meeting. Have ham radio programs that are interesting. Foster activities like antenna parties, club participation in contests, Field Day, and demonstrations at our local schools. JOTA is another area where our club can shine. Get up and do something other than complain....

For these reasons I would rather send our monies in defense of spectrum, and work on growing the ham community from within our own community and in our own community.

Steve
NU5D

Everyone one else has put their 2 cents in so I figured why not me.

I received my licenses in 1997. I wanted to get it for just one reason. Emergency communications and storm spotting.

I had no intention or desire to upgrade and still do not.

You would be surprised (are maybe not) at the amount of criticism I take for that position from many of the old timers.

The attitude of "If you do not learn code and upgrade then you're not really a ham" is very prevalent among the hobbies older generation.

Not only that, but in my experience many of the older hams wear their feelings on their sleeves. If someone disagrees with them, or

does something that was not done the way they would do it then look out because here comes the backbiting.

I experienced this first hand as the Vice President and then the President of TARC several years ago.

Specifically in the Emergency Communications area of the hobby, I have seen people who do not participate as a service to the community but rather as way

To get glory and honor for themselves. You can usually tell the ones that do this by every other word that comes out of their mouths being "I". I did.. I can. I am... I have...

I even had one be so bold to say the only reason he was involved at all was so he could earn a Presidential Citation Award.

I agree that the Amateur Radio hobby is in trouble. But I do not think it is because it has outlived it's usefulness. I believe there is still a need and very vital job in emergency communications for amateur radio to fill even right here in Bell County. It was not so long ago that a single lightning strike took out all communications and who came to the rescue?

So what is killing Amateur Radio? In my opinion its attitude. Simply the pride, arrogance, and laziness of its current members.

Those that are to prideful that they can not work together as a team to reach a common goal. It's their way or no way. If I can't have it may way, I will take my ball and go home.

Those that are so arrogant that they think God put them on this earth to be the super ham. They are the best at everything and by God you better not challenge them on anything. As we said above you can notice this group easily, just listen for the I's, I am, I can, I did, I have....

And those that are just plain lazy. They will complain about every little thing but will do NOTHING to change it. They do not get involved. They do not participate.

As I said above, I met many of these during my time as Vice President and then President of TARC.

Nothing will suck the enthusiasm out of a new ham faster than running into someone that meets one of the above descriptions.

Many of you know I was once very active in the local Ham communities. Simply because of the things I described, it stopped being fun. I sold everything and had nothing to do with Amateur radio for years. Recently I found I missed the old days and decided I was going to get back into amateur radio and enjoy it in spite of those described above.

I hope things change. I remember a day when you could get on .82 and ID and their would be 3 or 4 people come back just to say high. Now 90% of the time, the frequency is silent. I remember a time when sever weather came in, we had 10 or 12 mobile spotters out, hams at the TV stations, Hams running net controls, etc. Now if you can find more than 2 people on .82 during severe weather that are willing to actually go out and storm spot

it's a miracle. I remember a time when the "ARRL Special Services" designation for a club actually applied. I think it would be good for everyone to go to http://www.arrl.org/FandES/field/club/forms/fsd7/index.html and get a reminder of what that means.

How to fix it? (In my opinion)

1. Realize you are not perfect and while you are it realize neither is anyone else so stop being so critical.
2. If someone hurt your feelings, get over it! How old are you!
3. For those of you who have the "I" problem, you know, I can, I am, I did, I have, etc.You know who you are!
Wake up and smell the coffee. It is not all about you!. If you live to be patted on the back and told how great you are, find a new hobby to destroy.
4. Hey, remember what your momma always told you, "Play Nice!" You do not have to like someone to work together for a common good.
5. Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them! :-))

Now I realize that everything above is "My Opinion" and we all know opinions are like armpits. Everyone has two and they usually both stink, but I felt the need to share. :-)

Gary

I think the 2005 club meeting programs are filled, but I'm sure next year's program director would love to put you down for a presentation on your weather experiences. If you would collect 20 or 30 of your best (digital) pictures and jot down some captions, I'd be interested in adding that to the picture gallery on the website. You could email them to me or put them on a CD and bring it to a future meeting.

1586. Fw: [CTDXCC] ARDF on October 23

Yahoo group: Temple_ARC
Date: 2005-08-19 22:52:40 UTC
From: john, ke5c
Topic: 1586 Message: 1586

KA5CVH, W5JEN, and I would like to invite everyone to join us for a one-day two-meter-only ARDF course on Sunday, October 23, 2005. The day before, Saturday, is the Southwest Regional Orienteering Championships, hosted by the Houston Orienteering Club. Both events will be held at Bastrop State Park, located about a 45 minute drive east of Austin, TX.

http://www.texasardf.org/texas2005/

This will be our very first organized ARDF competition in Texas, and will include five transmitters on two meters. We hope everything goes well the first time around. If anyone on this list is thinking of attending, please let me know. We have a very limited supply of loaner equipment, but we can help anyone interested in building their own before the meet.

This is the weekend before CQWW Phone. You can probably even get home in time to see the Cowboys-Seahawks kickoff at 3PM.

1590. study books for a beginner ham

Yahoo group: Temple_ARC
Date: 2005-08-21 18:55:36 UTC
From: Betty W5PUP
Topic: 1590 Message: 1590

Hello to the group,
I am looking for some beginner study materials.
My son is interested in becoming a ham and all my material is completely out dated.

I would appreciate whatever help is available in the way of used study books.
He Lives in Arlington and I live in East texas.

I will at Belton for the hamfest Oct. 1.or my address is good on QRZ.

Thanks

Betty W5PUP

Dick AA5VU wrote:

>Wish the rest of the world would learn how to write the date on QSL cards.
>Some are REALLY hard to figure out the day and month.

It would be great to have a standard, but our style is the least logical of all - Month/Day/Year? C'mon!

For example, the 6th of September is written in at least 4 different ways:

USA 9/6/05

W Europe 6/9/05

E Europe, Russia 6/IX/05

Scandinavia 05/9/6

I've settled on the style "6 Sep 05". Yes, I know that is an Anglicized abbreviation of the month, but I'd bet 99% of the active hams in the world understand it. If anyone has a better, unambiguous solution, I'd be happy to start using it.

John, NT5C.

Subject: [Temple_ARC] ARRL Spectrum Defense Fund

I ran across this on the Internet the other day and had to blink and read it again to make sure who it was from, and who it is to. Then I had to think about whether to respond to it or let it be because, this is our home club guys. Well, I want to add something for all to think about. Let's see - I'm checking here so I can quote it correctly. "Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them!" My comment to this is - New and younger folks, come on, take your test and join the ranks. Seniors and Elmers, slide over a bit and make room for the new people. New members open your eyes and ears and listen to those Seniors and Elmers. Seniors and Elmers - shoe is on the other foot also - You might find you will learn something that is interesting. That is the way it should be and the way everyone should look at it. Now, for my real 2 cents worth. The hobby of Amateur Radio is like anything else, it has been built on a solid foundation and that solid foundation is CW or continuous wave which is the on off keying to make a series of dots and dashes. If you think about that, CW is the first mode of digital operation the hobby had. Now, that foundation is rock solid and can't be shaken. Everything else builds from there. As Gary put it, the old way will go away because the hobby must change. Gary, this is to you and everyone else - the hobby will continue to grow on that foundation, not change and be destroyed. If you destroy the foundation of anything, it goes away completely, period. Because of that rock solid foundation, Amateur Radio will never be destroyed, which, you got it, will only continue and be passed on to the younger generation from the seniors and elmers. And whether you like it or not, the younger generation will one day be the Seniors and Elmers.

Subject: [Temple_ARC] ARRL Spectrum Defense Fund

I ran across this on the Internet the other day and had to blink and read it again to make sure who it was from, and who it is to. Then I had to think about whether to respond to it or let it be because, this is our home club guys. Well, I want to add something for all to think about. Let's see - I'm checking here so I can quote it correctly. "Guess what, times have changed and the hobby must change with it or go the way of the 8-Track. (I know some of you probably still have them!" My comment to this is - New and younger folks, come on, take your test and join the ranks. Seniors and Elmers, slide over a bit and make room for the new people. New members open your eyes and ears and listen to those Seniors and Elmers. Seniors and Elmers - shoe is on the other foot also - You might find you will learn something that is interesting. That is the way it should be and the way everyone should look at it. Now, for my real 2 cents worth. The hobby of Amateur Radio is like anything else, it has been built on a solid foundation and that solid foundation is CW or continuous wave which is the on off keying to make a series of dots and dashes. If you think about that, CW is the first mode of digital operation the hobby had. Now, that foundation is rock solid and can't be shaken. Everything else builds from there. As Gary put it, the old way will go away because the hobby must change. Gary, this is to you and everyone else - the hobby will continue to grow on that foundation, not change and be destroyed. If you destroy the foundation of anything, it goes away completely, period. Because

of that rock solid foundation, Amateur Radio will never be destroyed, which, you got it, will only continue and be passed on to the younger generation from the seniors and elmers. And whether you like it or not, the younger generation will one day be the Seniors and Elmers.

Hello TARC thought you might like to see how your tax dollar are saving soldiers lives. The picture is on a FMTV truck or if you know duece 1/2 it's the new Army truck soliers are have been using in the Army for the last 10 year made right in Sealy, TX by Sterwart and Stevenson.

What the pictues shows is what happen to the truck after it hit a triple stack landmine. the funny looking cab sitting on the ground is called a LSAC (Low signiture armored cab) Sterwart and Stevenson starting making the LSAC for the FMTV for the Army back in NOV 2004 and production on the Truck started in Kuwait started in Feb 2005. The Cab did exactly what it's design to do take a licking and keep the soldiers alive. The 3 soldiers that were riding in the cab when it hit the landmine all came out unhurt, in fact the soldier sitting in the right seat or TC the landmine went off right underneath him. He was not hurt! I talk to the soldier in the last 5 days. he very happy with want a US company is doing to save soldiers lives

I will have more pictues of a FMTV that took a direct hit for 122m rocket in the right door, soon.

the soldiers lived!!

only a bloody nose.

take care TARC
I"m installing communication in the LSAC.

Kay is exactly right. Charlie had nothing whatsoever to do with any decision on VEC testing. Steve (who has chaired the VEC testing team) and I and several members of the board discussed the issue in light of the fact that we did not have a class make up this time and the extensive changes proposed to the licensing structure by the FCC in its NPRM.

The VEC session costs the club an extra $250 dollars for room rental, but more importantly, requires a substantial number of folks to run effectively. One issue we have been wrestling with the past several fests is making sure we had enough volunteers to make everything work effectively without overloading some of the members. I saw the lack of interest in the classes, coupled with the FCC changes as a opportunity to divert some resources this time to other parts of the fest. Accordingly Mike was instructed to not mention the VEC session

in the fest announcements. It is my hope that the Spring will bring a large upswing in upgrades, and perhaps new licenses, under the new FCC rules. In that case we would surely do VEC testing.

According to the bylaws, such an action of the president or the board can be overridden by a majority of the members with a quorum present. If we wish to do VEC testing, it will take a motion from the floor and a vote during next week's meeting. We may then need to find a new VEC chairman for this fest, as I believe Steve wants to put his efforts elsewhere during this fest.

So don't blame Charlie or anyone else - I take responsibiliy.

CU at the club meeting next week where we can openly discuss the issue.

73 - Darwin K5DOA

PS - I would be curious if there are any club members who were planning on taking a license or upgrade exam this time. If so, please reply either on reflector or directly to me.

kay and all -

You and Charlie have always bent over backwards to be considerate and helpful to all hams in the Temple area. Hats off to you and Charlie - don't even worry about this - it is not worth it.

To those that might be interested in monitoring Hurricane Katrina go to our website CTSSG in Yahoo Group or Echolink Node # 40340 and listen ONLY to the National Hurricane Center as they send out information

You can tune in on LSB 3.873 in the Day time and on 7.285 LSB during day time for emergency traffic handled thru the Tx DPS in Austin for this emergency.

If I can help out anyone in the effected area PLEASE can me. I will try to help out via Ham Radio.

GO TO THIS SITE TO VIEW KATRINA:

1614. hurricane net local-texas state guard

Yahoo group: Temple_ARC
Date: 2005-08-29 04:39:07 UTC
From: Carolyn Black
Topic: 1614 Message: 1614

From: Leon Cheney K5zzm, TSGARC President k5zzm@... 254-754-7513

The TSGARC will be assisting the Texas State Guard during Hurricane Katrina. They will be needing assistance during the event as follows:
1-There will be a 24 hr 7 day a week hurricane net on the 147.32 repeater 123 tone + shift
a-this will augment the HF traffic net which is on 24-7
b-we will be handling overload from that net for local use
c-any ham wishing to participate is welcome
2-This will entail sending and receiving on 2 meter and or HF.
3-The repeater will be in an emergency mode until further notice
a-Please remember to be courteous
b-Allow anyone to use the repeater but remind them of the net
4-We need every ham that can help to volunmteer for ANY time slot for any length of time
5-We ask that all hams monitor the 147.32 and know there is a net controller on the air
6-This schedule will be noted and emailed to all every 2-4 days for updates.
7-We are activating the TSGARC Emergency Relay plan. Details will be given to each volunteer ham. This will include protocol and other pertinent data vital to the mission.
Please contact me asap if you can help. This is a real important mission for hams and people needing immediate help. I welcome all of you for any time you can volunteer. It is also a time we can help the members of the State Guard's mission.
Leon, k5zzm

From: Leon Cheney K5zzm, TSGARC President k5zzm@... 254-754-7513

W5TSG EMERGENCY HURRICANE KATRINA NET INFO
The W5TSG 147.320 will commence a 24 hr 7 days per week emergency relay net for central Texas assisting the Texas State Guard and other emergency units. We will relay on 2 meter for traffic overflow on the emergency HF nets as well as direct communications from TSG units stationed at statewide locations.

The following is data for your use as Net Control anytime you are called upon for assistance.

Net Controllers will be on duty 24hrs per day. However, should the NC be busy handling traffic, please take the initiative to temporarily be a controller without being scheduled. Anytime you hear a call and no one answers, please handle the emergency with the information on this sheet.

If you have any question at anytime just ask or call. Someone on the net should be able to help if that fails.

DATA

Local Contacts

1-Leon Cheney (Major retired TSG)

Frequencies and related contacts

147.320 123 tone + shift TSG W5TSG repeater Waco

147.180 103.5 tone + shift Orange, TX

147.55 simplex Waco area

7.290 (7.285 emergency) 40 meters daytime HF net

3.873 80 meter night time HF net

14.325 Hurricane 20 meter net 24-7 HF

Contacts who may be in the affected areas of Orange or general area.

KD5SMC Wayne… Salvation Army (stationed Waco) in Orange

KD5MBX Aaron… American Red Cross- Houston and Orange

KA5SUR Lucky (Young)…Local Ham with HF Orange area

There will be more data provided as we get it for contacts and other pertinent data. Please watch your emails for updates and new data. Information will be provided in a timely manner.

We will be receiving daily reports from our people in the area and will transmit this periodically on the net for those monitoring. We have no idea how much traffic we will be handling but will man this is net until we are asked to stand down. Everyone will be updated daily and notified of any changes both by email and by net control.

REMEMBER: THIS IS AN EMERGENCY RELAY NET and the repeater needs to be relatively free of non-essential traffic. We are NOT GOING TO CLOSE THE REPEATER FOR ROUTINE TRAFFIC but net control needs to advise and control local traffic.

1627. Weather Education: Will We Ever Learn, Eventually?

Yahoo group: Temple_ARC
Date: 2005-08-31 03:30:37 UTC
From: WR1TX
Topic: 1627 Message: 1627

This is being posted to multiple Yahoo Group sites, so please realize that I ?m not sending this email to just one group of people here.

After what Katrina has done, it is now more important than ever that all of us need to understand and realize what Mother Nature can do to humanity on a whim. We need at least properly understand the basics of the Earth?s atmospheric engines and try to learn how and why the weather does what it does. We?ve made progress, but we certainly have a long way to go.

As far as I?m concerned, I have long believed that weather education is and always has been the key, and that belief could not have been brought home any stronger or grabbed the heart more than the recent and current events of Hurricane Katrina. As I am now a member of several Yahoo Groups of which the topic is weather, I have seen many people become more genuinely concerned about weather, whether it be nationwide or in their own backyards. These people need good and reliable information, and they certainly deserve it.

Skywarn classes taught by the National Weather Service are a very good first start, of course, but they are certainly not the final answer when it comes to weather education. One could study meteorology in college, or hang with people that have a lot of experience in weather, whether it is meteorology, storm spotting, or whatever. One can even research on his or her own; the possibilities are endless.

There is one thing I do suggest: pay close attention to those who are truly and reliably in the know when it comes to weather. Don?t count on mere assumptions or rumors; they can come back and bite you in the you-know-where. Go to the sources that have been proven to be reliable over a decent period of time; if they don?t have the answers you seek, it?s quite likely that those sources will be able to get the answers for you in time.

Now for those who are young and have a serious interest in weather, you may well be the meteorologists and storm spotters of the future. I heartily agree that it?s fun to talk about the weather, no matter what is happening in an individual?s neck of the woods. I have talked about it myself for many years, all the way back to as early as age 4 (I?m serious) when I could read some of the local newspaper and understand enough of the words to know what was going on. I?ve always enjoyed watching weather, including standing on a porch and watching it rain and thunder while the rest of the family would be inside shaking and cursing at me, calling me crazy and a few other words. (That still happens to this day, by the way!)

I enjoy talking about weather, but I am also serious about it?and I don?t play games when it comes down to severe weather. I have had a few people tell me that trying to educate people about weather is like talking to a brick wall. Well, that?s true to some extent?but there are many more out

there that have a lot of questions about weather that can and do often go unanswered, mainly by those who are in the know (especially locally) but don ?t want to be bothered or don?t wish to provide the time. Local, state, and sometimes even federal politics can be at fault, and it?s not fair to the general public when politics are played. Even some storm spotter groups refuse to take the time to properly educate those who wish to learn. But I am digressing here?

Those who are seriously involved in storm spotting, meteorology, and other related weather fields need to get more involved in educating the general public about weather in all of its forms. This is especially true when it comes to getting rid of the myths about weather, or the thoughts like:

1) ?It?s never happened here, and it never will.?
2) ?I survived the last one, and I?ll survive this one,
too.?
3) ?You don?t know what you?re talking about.?

It?s that last comment that burns me the most, more than any other comment that could be uttered out there, especially if you truly DO know what you?re talking about.

To those who are experienced, don?t ever push away those who want to learn, for we must educate them and do so in a proper manner. From the NWS down to the local storm spotter groups, we must all take a part in educating all who want to listen and learn.

Unfortunately, Hurricane Katrina has taught way too many of us that?and there are some who will never reap the benefits, or will learn way too late.

Now, if you feel that I may have offended some of you in some way with this post?I sincerely apologize. But, these are thoughts that I have long believed and held my entire lifetime. I wanted to share those thoughts with all of you, and I hope that you agree to some extent.

Tonight, think about the unfolding tragedy in New Orleans and elsewhere along the Gulf Coast tonight as you tuck your loved ones into bed. For those who are young, especially the teenagers that are reading this posting, please learn from this experience. Learn and apply what you have learned to your working knowledge about weather and all things related to it. You?ll gain from it immensely.

Thank you again for reading these personal comments that I am sharing with all of you. Again, if I happen to offend anyone, I sincerely apologize. In the meantime, please feel free to send any comments my way?whether they may be positive or negative. I?ll reply to each and every one no matter what.

Warren Rowe / WR1TX

1628. Re: Katrina: A boost to amateur radio?

Yahoo group: Temple_ARC
Date: 2005-08-31 04:00:03 UTC
From: Ron
Topic: 1627 Message: 1628

I retired to the Philippines from a university in south Louisiana in 2000. My two grown children live in Hammond and Baton Rouge and I have many friends in New Orleans. We receive CNN and Fox in the Philippines, so I stayed glued to the TV and the Internet for the last three days. Some of the TV stations in south Louisiana were able to send live feeds via the net. The reporters on the air have constantly mentioned the difficulty of communication via both land lines and cellular transmission. The public has had no means of communicating with loved ones living afar. During past hurricanes, the local ham clubs worked hard to provide help such as this. I have not heard from SELARC, (SouthEast Louisiana Amateur Radio Club) but know their membership is working long hours. Unfortunately, their membership has dwindled and they have fewer that in the past.

Perhaps ARRL and others might be able to encourage the growth of amateur radio since other communication means are frequently not functioning in situations such as Katrina.

1635. another controversy?

Yahoo group: Temple_ARC
Date: 2005-09-02 15:35:30 UTC
From: john, ke5c
Topic: 1635 Message: 1635

we argue off and on about putting some of the tarc treasury to "good" use. seldom, if ever, have we agreed on "good", but if katrina relief is not good use, then what is? i still believe that we need to support the spectrum defense effort of the arrl, but at the next board meeting, i'll introduce a motion to bring forward to the club a request to donate $1000 to the katrina relief effort. our tarc president observes correctly that this is not an urgent issue since the real support needs to be long lasting, and in a month we may have refugees staying somewhere locally. in that case, tarc members might vote to support that local effort, or might vote to support the sometimes bumbling but always there and trying american red cross and/or salvation army. so i ask the members to think about this and come to the next club meeting in one month with ideas.

73, john
tarc director

1636. Re: [Temple_ARC] another controversy?

Yahoo group: Temple_ARC
Date: 2005-09-02 16:02:32 UTC
From: K5DOA@aol.com
Topic: 1635 Message: 1636

My thanks to John for raising this important issue - The club needs to support the relief effort and we can afford it. I encourage everyone to donate where they can. The national organizations like the Red Cross and Salvation Army need and deserve our support.

At the same time, we should realize that this drama is only beginning to unfold and the American people are going to need to support perhaps a million or more folks for months and perhaps years. The relief effort and refugees are going to fan out across the entire country and will likely reach into our local area. That is why I am counseling that we hold off until the next meeting and see where we can put our funds to the best use.

73 - Darwin K5DOA

Its not BPL, thank god.

its the new clearwire.com internet company. Craig McCaw is the owner of it.. 2.5GHz wireless internet...

I am playing with there equipment now... In a couple years, it should be seamless coverage nation wide.

Have used it mobile... around temple, killeen, belton areas.. Soon to be in waco too.

Several of us using it or trying it out... 1.5meg download for 30.00 a month.

Subject: Fwd: Re: Mutual Aid request for ARES®operators - Harris County - Extension to Monday PM

All,

The Harris County EOC has requested operators until at least
Monday evening 12 Midnight in support of evacuee relief efforts at the
Astrodome. We may be requested to remain but not 24X7
following this current assignment period which should be determined
sometime Sunday. We are still requiring and accepting operators from
District 1 (counties surrounding Harris County). Please do not self
deploy as you will be turned away if your credentials are not on the
operations list.
Assignments are being made in six hour shifts. Operators should consider this
to be a self sufficient assignment where an HT, good batteries and
personal items like water are needed. Operators are to make their own
personal accommodations for over night stays and meals. Hotel
accommodations are scarce.

A web site, katrina.ab2m.net has been set up to list your
availability. When doing so use "Houston Astrodome -" before you enter
the hours you are available. If you are immediately available please
contact the Transtar Radio Room at 7138813164. Please do NOT self deploy.
You will be turned away if your credentials are not on the list at the
command center. You will get instructions from Hal as to where to go
and who to contact.

We appreciate any assistance you can give during this short period of need.

73,
Ken

Subject: Help Needed In Central Louisiana

Know that money is tight everywhere. Our 3 priorities right now are to get
emergency traffic passed. There are emergencies in N.O. right now that we
don't even know about due to hams without equipment down there.
Our second priority is getting supplies (food and water) to affected areas.
We need inexpensive HF gear to put on the mobile food kitchens (Red Cross,
Salv. Army, and Christian). 3rd is health and welfare--helping friends and
relatives find each other. With Echolink basically being down we cannot
comm. with 3 southern cities via our repeaters. We did have Baton Rouge,
Lake Charles, and Alexandria linked before the radio went out. Our
echolinks system is wired up for an Icom 2100. Other gear needed are
pre-made dipoles for 80 and 40 meters. Our 2100H that we had hooked up to
Echolink needs repaired. Our funds are dry. We cannot even afford to send
it off to get fixed. This disaster has taxed even us hams that were not
affected by the Hurricane. HELP!

Please pass this email to anyone that can possibly assist us. Equipment
and/or funds can be send to

1649. Hurricane NET

Yahoo group: Temple_ARC
Date: 2005-09-05 16:20:35 UTC
From: Carolyn Black
Topic: 1649 Message: 1649

From: Leon Cheney K5zzm, TSGARC President
k5zzm@... 254-754-7513

The TSGARC is assisting the Texas State Guard during Hurricane Katrina. They will need assistance during the event as follows:

1-There is a 24 hr 7 day a week hurricane net on the 147.32 repeater 123 tone + shift

a-this will augment the HF traffic net which is on 24-7

b-we will be handling overload from that net for local use

c-any ham wishing to participate is welcome

2-This will entail sending and receiving on 2 meter and/or HF.

3-The repeater will be in an emergency mode until further notice

a-Please remember to be courteous

b-Allow anyone to use the repeater but remind them of the net

4-We need every ham that can help and volunteer for ANY time slot for any length of time

5-We ask that all hams monitor the 147.32 and know there is a net controller on the air

6-This schedule will be noted and emailed to all every 2-4 days for updates.

7-We are activating the TSGARC Emergency Relay plan. Details will be given to each volunteer ham. This will include protocol and other pertinent data vital to the mission.

Please contact me asap if you can help. This is a real important mission for hams and people needing immediate help. I welcome all of you for any time you can volunteer. It is also a time we can help the members of the State Guard's mission.

Leon, k5zzm

W5TSG EMERGENCY HURRICANE KATRINA NET INFO

The following is data for your use as Net Control anytime you are called upon for assistance.

Net Controllers will be on duty 24hrs per day. However, should the NC be busy handling traffic, please take the initiative to temporarily be a controller without being scheduled. Anytime you hear a call and no one answers, please handle the emergency with the information on this sheet.

If you have any question at anytime just ask or call. Someone on the net should be able to help if that fails.

There will be more data provided as we get it for contacts and other pertinent data. Please watch your emails for updates and new data. Information will be provided in a timely manner.

We will be receiving daily reports from our people in the area and will transmit this periodically on the net for those monitoring. We have no idea how much traffic we will be handling but will man this net until we are asked to stand down. Everyone will be updated

daily and notified of any changes both by email and by net control.

REMEMBER: THIS IS AN EMERGENCY RELAY NET and the repeater needs to be relatively free of non-essential traffic. We are NOT GOING TO CLOSE THE REPEATER FOR ROUTINE TRAFFIC but net control needs to advise and control local traffic

USING OUT-STATE REPEATER TO ENTER THE ECHO LINK TO OUR LOCAL CENTRAL TEXAS REPEATER:

1-First program you radio with the frequencies noted below

2-Once you are on the frequency your use the dial pad and dial in the numbers below and

wait until you here it say "connection"

3-You can then make a regular call by call a station or anyone in the area you wish to speak with.

Attachments: 2 described; binary payloads are missing from this source WARC

This morning my station in Gatesville worked N5NIR and N5TD on 23CM. I am using a Kenwood TS2000X and the following M2 antenna at 190 ft.

My station is at 31 57 29 N X 97 41 10, - Ground Elevation is 1050 ft plus 190 ft hgt to tip of the antenna. Paul, Charlie, can you run great circle calculations? I would like to know the actual distances between our stations.

Steve

NU5D

SPECIFICATIONS

Model

23CM35EZ

Frequency range

1250 TO 1300

Gain over a dipole

18.4 dBd

Front to Back

21.3 dBd

Beamwidth

25 dB (see patterns)

VSWR

1.2:1 Typical (see plots)

Input Imp / Connector

50 Ohm / 'N' Fem.

Power Handling

600 WATTS

Boom length and diameter

10 ft (13 WL) / .75"

Mast Size

1-1/2" & 2"

Stacking Distance

28" W , 26" H

Wind Area / Survival

0.6 sq ft / 100 MPH

Weight / ShipWt.

2.5 LBS / 3 LBS

FEATURES

The 23CM35EZ is the result of all the latest computer optimizing technology. Perfect balance is achieved with balun 'inside' the folded dipole itself. This eliminates connectors and cable and, as always with M2 driven elements, the whole assembly is sealed. When other designs will have succumbed to wind and weather, the 100 MPH-rated EZ will be as good as new and still performing to 'spec'!
The 'EZ' is an outstanding performer for 'hill-topping" or base station applications. Great for ATV, Repeaters and Oscar, too. Gain peaks in the weak signal Tropo and EME part of the band and tops any other antenna of comparable boom length! The directivity, gain and the clean pattern will astound you.

<http://www.radioreference.com/wiki/index.php/Hurricane_Katrina#Louisiana>

Note that it is a wiki site, information may have natural blemishes and vary in texture and quality.

Louisiana
a.. NOPD's Wide Area EDACS ProVoice system is now up and operational. The system survived the
initial hurricane, but subsequent flooding had knocked out generators, however the generators have
been brought back online.
a.. The Jefferson Parish Smartzone system is currently down. The 350ft self supporting tower was
knocked down during the storm. ITAC1 is being used for the East bank and ITAC3 for the West bank
comms. Currently operating all the comms from the Galeria building at I-10 and Causeway Blvd.
a.. St Tammany Parish's EDACS ProVoice system is currently back up an operational.
a.. Most sites for the Lousisiana State Smartzone system are operational, however reports indicate
that the North Shore Smartzone sites are currently down. Communications are occuring on the
Smartzone system in the New Orleans Metro Area.
a.. The Bridge City Site is Down
b.. The LaPlace Site is UP
c.. Northshore Sites are Down
a.. Wasington Parish - All power, Telephone, Water are down, The whole parish is with gas except
for a few stations that some gas. The Police, Sheriff, and Emergency Management Agencies and their
respective repeaters are on backup generators So they have Local Parish wide communications. But No
communication in or out the parish.
a.. Ad-Hoc Communications Systems
a.. Motorola has delivered a 700 MHz Communications trailer to the Louisiana State Police
,however it is unknown where it is being used.
b.. Remote agencies on site are using the following:

a.. Orange County FL Units - 800 MHz NPSPAC Simplex Direct
b.. Austin, TX Units - 800 MHz NPSPAC Simplex Direct
[edit]Mississippi
a.. Harrison County EDACS system is currently operational
b.. Gulfport - Unknown
c.. Biloxi - Unknown
[edit]Alabama
a.. Mobile - Unknown

1655. Update - 3:30pm(CDT) 7-Sept-2005

Yahoo group: Temple_ARC
Date: 2005-09-07 22:05:43 UTC
From: john, ke5c
Topic: 1655 Message: 1655

There was a very strong X Class solar flare at 1740 UTC that caused a HF radio blackout. Three hours later the HF bands are still affected. This radio blackout has slowed and in many cases blocked HF communications with the Katrina affected areas. Propagation is returning slowly and should improve with time.

Subject: Katrina Response Update.

I believe the event has crested. We have a long, long ways to go, but we are on the downhill side. The overall population of evacuees seems to be dropping. Some estimate we might begin really winding down in 30 days or so.

We have had a change in our Katrina Response schedule. We are no longer staffing the night time shifts. Because the six hour shifts seem to be so well received, we elected to move things around slightly.

Effective immediately, we will staff only two shifts, 7AM to 1PM and 1PM to 7PM. That goes for both Transtar and Reliant City.

If you have signed up for a day shift, that remains scheduled, just an hour different.

We still have many slots open. Please call Transtar and sign up. 713-881-3169.

We do not have good contact information for everybody, so please relay this message far and wide.

Folks, the accomplishment so far has been described as building a city in 12 hours. That is, of course, impossible. But this community came together and made the impossible happen. The community. You.

Thanks.

As most of you know, the Texas State Guard was activated and are now around the state assisting the state with victim shelters etc. We activated a net to assist the guard in this endeavor. We were also asked to assist the Salvation Army with locating victms and help unite them with their families. We are backlogged about 50,000 requests and climbing. WE NEED YOUR HELP. This can mean helping on hf, 2m, internet or phone. Even non-hams can work the phones and internet. The guard needs our help and I am asking for any time you can give to help. You need no skills to do this just a big heart. I know we can do it!!
Please help by letting me know in what way you can...This is serious for our fellow humans and we are the ones they count on.!!!
Again...please help now !!!

1662. SATERN NET REPORT FOR 9/7/05

Yahoo group: Temple_ARC
Date: 2005-09-09 22:42:33 UTC
From: Carolyn Black
Topic: 1662 Message: 1662

From Leon K5zzm k5zzm@...

Today marks the 11th day of emergency net operations for hurricane Katrina with no end in sight. WA4BZY reports that we have received just under 50,000 H&W messages thus far. It is difficult to keep accurate records on the totals due to multiple agencies submitting H&W traffic from many locations. The one thing thats for certain is the number of H&W traffic requests is slowing down day by day. Quint is also sending out H&W requests to many volunteers in 100 pk bundles to speed up the operation. It is estimated that only 9,000 messages remain to be sent out to volunteers. Our corporate partner is doing an excellent job of handling large block of traffic, and are reporting back to Quint each day on their progress.

Propagation was a real challenge today, with a major solar flare shutting down all amateur frequencies at approximately 17:30 hrs zulu. This disruption lasted for several hours which allowed only extremely short skip communications. The impact of this event will be felt for a minimum of several days. All net controls should stay on frequency to monitor conditions until the band improves. During the past few days, the SATERN net has closed operations at approximately 24:00 hrs zulu due to poor propagation. Several net controls have been monitoring the frequency for possible traffic if the band open up. .Net control station should not shut down the net without checking with N9AL or myself. Again, my telephone number is (303) 660-1467. I will be at home during these hours and ready to evaluate the situation.

While monitoring the net today, I noticed that some stations, including net control stations were too quick to key their mics to respond to stations queries. This resulted in other stations with traffic not being able to check in. It is always a good practice to wait a second or two before responding to give time for stations to break in or finish their transmissions. Also, today we had one station that had his VOX on, and he was transmitting over the net frequency without knowing it. This disruption lasted for 15-20 minutes, and a call was about to be made to the FCC to track the individual. Net operations should use push to talk at all times to avoid problems of this type.

It would help SATERN net control scheduling is all net control stations would check in at 14:00 hrs zulu to get the schedule completed early in the day. I still need daily net reports from each net control station operating during the day to provide information for this report. We also need a list of all stations transmitting from the effective area so we can pass them on to others as part of this report. It would also be most helpful to get their hours of operation and frequencies other than the SATERN net frequency so we have the ability to pass emergency traffic into the area at will.

<>We are receiving reports that large numbers of survivors are being transported to other areas within the USA. Denver, for example received 132 survivors this morning and was told to prepare for 5,000. Although there are several agencies making up a database of survivors and their locations, there is no central effort to develop a central database for all agencies to input data. Many of these survivors and their families are being relocated by church and other groups, and no records are being kept on their current location. SATERN is

working on getting all agencies to work together to provide needed information without duplications and will request FEMA and other governmental agencies to assist in this task. If it has already been started, we will assist those agencies in getting the needed information ASAP.
Camp Wonderland is to receive survivors in the near future. K9ERG will move his trailer closer to the facility to assist where needed. He has HF capabilities and is an excellent communicator.

<>There have been many children who have been separated from their parents during this emergency. Please announce on the net that the MISSINGKIDS.com web site has an extensive listing of these children. If any SATERN net control does not have the current phone numbers, Email addresses and locations of agencies throughout the country, please let me know. The list is growing each day and we must keep current. Contact me via my Email at WA0LSB@.... I will arrange to get them to you.

<>

<>
I am well pleased with the overall operation of the SATERN net thus far. With few exceptions, we have done our job well under adverse conditions. Please accept my thanks to all who have participated.

1663. Relief Efforts at Texas A & M

Yahoo group: Temple_ARC
Date: 2005-09-10 16:16:05 UTC
From: Joe Robertson
Topic: 1663 Message: 1663

Thought you might like to read a great letter about the students at A&M and their response to the Katrina evacuees.

Subject: Relief Efforts at Texas A&M Dad: This is why I attend A&M- to be a part of such an awesome group of people who constantly put others before themselves & be able to say that I am an Aggie. Love you. xoxo, Alli
Forwarded From: "President Robert M. Gates" president@...
<mailto:president@...>
To: Faculty, Students and Staff
Subject: Relief Efforts at Texas A&M
Any Aggie of any age who believes the Spirit of Texas A&M is waning should have been at Reed Arena over the past three days.
Under an agreement with local government officials, Texas A&M has made Reed Arena available as a temporary shelter for a little over two hundred or so evacuees from New Orleans through September 9th. Probably like many parents and others, I was deeply concerned about security given what we all had read about violence in New Orleans. I only agreed to the use of Reed after being assured that the evacuees would be vetted, processed and security wanded at a facility elsewhere in Brazos County, wanded again upon arrival at Reed, and that University police and other security would be present at all times at Reed. Students who park at Reed Arena (mostly freshmen) will be parking elsewhere on campus for the week. The evacuees are escorted by non-students wherever they go.
I asked the Commandant of the Corps of Cadets, Lt. General John Van Alstyne, to take charge of this endeavor, in no small part because one of his last responsibilities at the Pentagon was taking care of displaced military families after 9/11. I also wanted a no-nonsense person in charge. He has told me that he is quite comfortable with the security arrangements. Either he or his chief of staff are at Reed 24/7.
Now to the best part. With little advance notice, Aggies sprang into action last Friday. The Corps of Cadets was asked on Friday afternoonto set up several hundred beds on the floor of Reed Arena; to help establish a structure for processing the evacuees; to make arrangements for them to shower and get new clothes; to help develop a process for medical checks; and so on. (Contrary to some rumors, the Corps was never asked or expected to provide security.) Lt. General Van Alstyne asked the Corps Commander, Matt Ockwood, for 300 volunteers to do these tasks. 900 cadets volunteered, and Reed Arena was ready after the cadets worked all night.
The first evacuees began to arrive around midnight Saturday. They had boarded busses in New Orleans that morning, had been driven to Dallas and then finally to College Station - all in one day. Of the more than 200 arrivals, most were families, including some 40 children and a

number of elderly. They arrived exhausted, dirty, hungry and many in despair.
They then encountered an Aggie miracle. Clean beds (not cots but surplus beds from a refurbished Corps dorm), showers, hot food, medical treatment, baby supplies for mothers, toys for children and more. But most of all, what they encountered were a couple of hundred compassionate, caring Aggie cadets and other volunteers. The cadets escorted them to their assigned beds, and not only saw to their individual needs, but sat on the side of their beds with them, talked with them - treated them like they were a member of the family. The cadets made them feel welcome and cared about.
Sunday, when I visited Reed, I learned that the women of the Aggie Dance Team had organized and were running a distribution center for pillows, towels, bedding, personal hygiene kits, baby food, diapers and much more; that sorority women were running a child care facility for dozens of children, well supplied with toys, juice, coloring books and cartoon videos; and that plans were under way for other student leaders and students to replace the cadets, some of whom had been at Reed for more than 50 hours. Plans were underway for some of our athletes (and escorts) to take some of the evacuee boys ages 10-16 to the Rec Center
to shoot hoops - boys perhaps including one I met who had treaded water under a bridge for 11 hours before being rescued by a helicopter. There is a communications room where the evacuees can use both telephone and internet to try to reach relatives and friends. The Red
Cross, United Way, and other community organizations are right there on the Arena floor, and the Salvation Army is serving three meals a day. Escorted trips are being organized throughout the day to laundromats and stores. Area physicians, supplemented by the Aggie Care Team and the Health Science Center are available. Being treated with dignity, respect and compassion, our guests have responded accordingly.
Many other Aggie students are involved in the relief effort on campus, in the local community, and at our Galveston campus. Sunday afternoon, students organized a massive collection effort to gather canned food and clothes as part of the MSC's Open House. Student Government, led by Student Body President Jim Carlson, is planning other relief- associated activities, including helping organize more volunteers to work at Reed Arena the rest of this week.
By agreement with Brazos county officials, Reed Arena is a temporary location for these evacuees, and during this week, we are assured that most, if not all, of the evacuees will move to longer-term housing.
Aggies need to know that the past few days have been a high point in the history of Texas A&M as we have responded to this terrible disaster named Katrina. Seeing the desire to serve, the organizational skill, the willingness to work, the caring and compassion, and more, on the part of the Corps of Cadets, the Dance Team, the sororities and so many other students who have worked incredibly long hours - has been a profoundly moving experience. I do
not know a single University official who, having watched our students over the past three days, does not choke up with emotion out of pride

in these amazing young people.
And it's not just the students who have been amazing. It is also our staff, including those who today began admitting and helping up to 1,000 students displaced by the Hurricane. Faculty and administrators have volunteered as well, and also put in long hours to ensure that these displaced students can be processed into Texas A&M and their classes with speed and efficiency. I visited the processing center this morning and met many of the parents and students; I know now that they will never forget our generosity and warm welcome to Aggieland.
Aggies often speak of "the other education" here. My original intent had been to keep the evacuees entirely isolated from our students. Once assured of the safety of the students, that would have been the wrong decision. I have no doubt that the Aggie students who are participating in this extraordinary humanitarian endeavor will never forget it -- or what they are learning from it about crisis management
and, far more importantly, about their own humanity and character. Nor do I doubt that the evacuees, all of whom are now wearing Texas A&M t-shirts, will always remember how these young people treated them and cared for them.
The hearts of every Aggie should swell with pride in what this University is doing for fellow Americans in trouble, and especially in what our students and staff are doing, to help those devastated by Hurricane Katrina. I thanked a University policeman inside Reed yesterday for what he was doing, and he looked at me with tears in his eyes and replied, "It's an honor to be here, sir."

Subject: [CTDXCC] BPL like sounds on 40M here

I have an S9+ rapid popping sound on all bands that has come and gone several times today and yesterday - going on right now. Sounds like the ARRL video BPL sounds - it is imparing 40M Winlink traffic out of LA/MS! Anyone hearing this? My location a few miles west of Georgetown.

Tom Whiteside N5TW

-----end of message-----

last night just outside of gatesville i was on nu5d's station. sometime before the start of the sprint we heard something like that on 40 meters - we looked at each other like, what???. i don't know how long it lasted. we went to 80, then to 20 to tune his amp for the sprint, but didn't listen closely other than to be sure we weren't right on top of anyone. by the time we got back to 40 it was gone.

i just (0320 z) qso'ed k5gr in oklahoma after i heard him talking to a florida station (who i couldn't copy) on 7027. they both heard strange noises tonight on 40. k5gr described it like the old russian woodpecker, and what i heard last night did sound reminiscent but not perfectly like that. f3nb called me right afterwards, and i tried to ask him if he was hearing any different noise on 40, and he said just a lot of qrn, but i don't know how good he is with english. right now i'm hearing a lot of popping, but that my be normal summer qrn and i am just really paying attention. i'm not hearing that repetitive pulsing.

the map on page three of this product brochure:
http://www.raytheon.com/products/stellent/groups/public/documents/legacy_site/cms01_049201.pdf
suggests that homeland security is operating an over the horizon radar looking at the caribbean right now with a station somewhere in texas. maybe they've tweaked it lately, maybe it's out of adjustment, or maybe we're hearing it due to all the geomanetic activity? the usa old soviet days othr system is supposedly "warm mothballed" and keep in working order. consider today is "9-11", maybe they've been running it these past few days, or maybe the soviets are tinkering with theirs again?

puzzling, john

1675. Road Trip anyone?

Yahoo group: Temple_ARC
Date: 2005-09-15 17:25:05 UTC
From: Gary Dewrell
Topic: 1675 Message: 1675

I talked to Jerry today. I am considering going but need a few more volunteers. If interested give me a call at 254-493-4998.

Gary Dewrell
KD5ABQ

------Email from Jerry0000
This is a renewed plea for organized teams (4 people preferred) to travel to Hancock County Mississippi (just across the Mississippi River from Louisiana on I-10).

The Hancock County EOC was totally destroyed, and has been relocated to a building at the NASA Stennis Space Flight Center. The public telephone and cell systems are destroyed. Public safety communications systems are barely functioning.

ARES teams, primarily from the Northern Florida section, have been on-site and providing essential communications. They have been repairing and operating public service radio systems, as well as using Amateur Radio to relay between public service agencies, handling 100-150 urgent public safety calls per day. Most of these teams have been on a 5-7 day rotation, and they are beginning to run short of people available to send.

The Red Cross communications support effort being managed by the Alabama Section Manager, Greg Sarratt W4OZK, in Montgomery Alabama is providing some operators. This is not expected to be sufficient to meet future needs, especially beyond this coming weekend. The expectation is that this effort will continue at least to the end of September and perhaps into early October.

WHAT IS REQUIRED
A minimum of 4 operators are needed each day to replace those that are rotating back home. Food, water, showers (might be cold water), and a place to sleep are available. The place to sleep could be on a tile floor in the EOC, or you can pitch your tent outside. Most communications are on VHF with 20-25 watts being adequate, while an HT is not. HF is available, so brining it is not necessary.

IF YOU ARE AVAILABLE
Please e-mail me directly - kk5ca_at_arrl.net. I must have the date when you expect you could be on-site in Southern Mississippi, and how many days you could remain there. Make the subject HANCOCK COUNTY

The Red Cross communications support effort being managed by the Alabama Section Manager, Greg Sarratt W4OZK, in Montgomery Alabama is providing some operators. This is not expected to be sufficient to meet future needs, especially beyond this coming weekend. The expectation is that this effort will continue at least to the end of September and perhaps into early October.

WHAT IS REQUIRED
A minimum of 4 operators are needed each day to replace those that are rotating back home. Food, water, showers (might be cold water), and a place to sleep are available. The place to sleep could be on a tile floor in the EOC, or you can pitch your tent outside. Most communications are on VHF with 20-25 watts being adequate, while an HT is not. HF is available, so brining it is not necessary.

IF YOU ARE AVAILABLE
Please e-mail me directly - kk5ca_at_arrl.net. I must have the date

when you expect you could be on-site in Southern Mississippi, and
how many days you could remain there. Make the subject HANCOCK COUNTY

Jerry

1687. NU5D Tower/Antenna Pix

Yahoo group: Temple_ARC
Date: 2005-09-19 13:25:52 UTC
From: Steve S. Bosshard
Topic: 1687 Message: 1687
Attachments: 2 described; binary payloads are missing from this source WARC

The tall tower is a Rohn SSV, 180 foot, sections 1 thru 9 with a 20 ft, 1 1/2" schedule 80 mast protruding 12 feet out the top with steps and a TailTwister rotor. The top antenna is a Cushcraft 5 element 2M/70CM vertical, then a 31 Element M2 1.2Ghz Vertical, then a HyGain 7031, 70CM Horizontal, and a HyGain DX215 Horizontal 2M antenna. There are 2, DB420 commercial antennas at 160 ft, and a 2M/70CM Vertical Dual Band Omni at 120Ft. Below the 120Ft Antenna is an inverted vee, 135 feet either side of the insulator fed with 110 feet of 450 Ohm window line into a 9:1 Balance transformer, then coaxial into the shack.

The second tower is a 60 ft Rohn 55G with a 21 ft 1 1/2" Schedule 40 Mast protruding 15 feet with steps. The top antennas are a Stacked 11 element Cushcraft Vertical array, then a HyGain DX66, 6 element Horizontal yagi, then a HyGain Explorer 3 element triband yagi. I have a Cushcraft A3WS, 12 and 17 M, 3 element Yagi to go between the Explorer 14 and the DX66.

There is a 600 ft triangular loop at 60 feet that connects to two Rohn 25G towers on the South property line, and a Alpha Delta DXCC, shortened dipole at 55ft. The DXCC will be replaced with a HyGain 5 band dipole soon. Also there is an 860 Mhz yagi for listening to the Bell County Radio System and comm with my Waco, Temple and Killeen SMRS systems. Finally, for creature comfort, there is a Direct TV antenna at roof level (courtesy KD5UBP).

Hope you enjoy the pix,

73,

Steve NU5D

?????

And the point is????

Just because I have a repeater in Temple has nothing to do with the fact that I upgraded after fighting the code for over 13 years.

I'm not superman because I have a repeater in Central Texas. That doesn't make me special.. Just shows that I engaged in a part of the hobby that I enjoy and spent a pocket full of cash to have something that peaks my interest.

1692. Another report of a hams efforts with Katrina... in Mississippi

Yahoo group: Temple_ARC
Date: 2005-09-19 21:10:57 UTC
From: Gerald L. Richmond - N5ZXJ
Topic: 1692 Message: 1692

I have just completed my tour and returned home today from assignment in Hattiesburg Mississippi. If at all possible I recommend a week for anyone that can spare the time. It's a very, humbling experience to see so many in need. I,am thrilled with the action and response of local hams after the disaster to bring their equipment back online immediately and man it before seeing to their own homes. They were able to take this second week off as volunteer hams from around the country came in to relieve them. Every volunteer that came in, came loaded for bear. Ready to dispatch to wilderness environment at a moments notice. As we quickly found out, all that was needed was VHF capabilities due to having all the repeaters online. A further note of atta-boy for the locals who linked all the repeaters together and used a common PL tone. Much less complicated for the visiting Hams. The only HF needed was for Chapter Base which was used for communication to Montgomery W4AP. Band conditions were so bad that much of the communication reverted to Cell service when available or E-Mail. We were also invited to the Ham meeting in which 4 of us attended on the 13th of Sept. It was pointed out that 90% of us came prepared for packet operations but there were no nodes around. No one had experimented or used that capability. Their Repeater committee is now addressing that issue and plans for the future use of Win-Link 2000. Another lesson learned.

We were able to respond to all request for communication and provided a ham on each Emergency Response Vehicle. The Red Cross Erv's come equipped with a 150mhz transmitter which is useless when the average ERV runs 60 to 75 miles away from Base. All facilities of the Red Cross had a Ham in them. We were directly involved in relaying resource needs and contacting Police and Military back-up for: 6 riots, ! EMT run, and 1 suicide caller. The Red Cross maintained a Doctor on 1 ERV and we were able to contact him at the push of a button. A lesson learned here was that Mag mounts on the ERV's could only go on the hood.(Rest is Fiberglass) I was the only one who thought to bring a VHF antenna Tuner to use the built in 150 MHz whip. One area was a dead spot due to the shifting of the ground-plane during the hurricane. It will require future repairs climbing the tower. In the interim not even 90 watts was effective at a range of 12 miles to a 200 foot tower. Using the whip was the only way. Incidentally the Red Cross supplied one of it's new 1/4 million dollar communication vehicle. A truly wondrous site to behold and drool over. No we were only allowed to touch the outside of it.It arrived on site able to patch any band to any other band except for one problem. It had no patch cords. The local hams had to spend an entire day making patch cords from scrounged parts. But it was immediately dispatch to the South where it was needed most. Rumor has it there were 4 in the area. It even has a 50 foot mast with a 360 degree camera to send images back to EOC.

Today the 17th was the last day for the main kitchen to serve and reports were coming in of large areas not yet seen by the Red Cross. I was asked to scout the southern regions on my way back to Texas and was shocked at the advances made despite earlier reports. Electricity had been re-established along major routes

and now was progressing to the outlying areas. I 10 had opened and we didn't even know it. I quite by accident stumbled into the Hancock County EOC in Kiln Ms. and found a very active and hard working group of hams serving a totally different role than the one I had just left. As of the 16th the EOC reported they had enough Hams to do the job and would Montgomery please turn off the faucet. I informed them there were 22 hams in Hattiesburg and on Sat. the demand for service would be reduced by 2/3. They were chomping at the bit to come down.

The role of Hams in the two locations was quite different in that Hattiesburg was 100% support for the Red Cross. 911 service was still active and local government was still in charge. By contrast, Hancock EOC is saturated with every different 3 and 4 letter government agent you could think of. Most of the cross communicating is happening because of Hams and through Hams. Even California Forestry will be using Ham Radio to communicate. Only 10 to 20% is actual Red Cross support as that is done in Biloxi. Local government infrastructure was flattened by Katrina. I'm proud of the Hams ability to compensate and adapt to the changing needs.

Oh and before I forget, KUDOS to Uncle Bill for sending the Microsoft Demo wagon to Hattiesburg providing Satellite phone and Internet service to evacuees and volunteers alike free of charge. This eliminated the need for Health and Welfare Traffic entirely for us.

Overall I'm proud of being a Ham and participating in the relief effort to help structure logistics and ease the suffering of others. I've said repeatedly, There but for the Breath of God go I. Just one high pressure cell from hitting my home instead of someone else. A Ham in Hancock EOC said it best though,"This isn't Field Day it's REAL Day 05 and it's going to last a lot longer. Latest reports are that Evacuees are in all 50 states. Look around and ask someone, I'll bet there's something you can do to help.

The W5TSG net has been on 24 hours a day 7 days a week since the 1st of Sept. The radio operators have been monitoring and active as net control and messengers since this date.

The total number of hours with all nets and monitoring have added up to : 7296 hours
The frequency/meters covered have been 70cm, 2m, 20m, 40, 80m

The star indicates ham operators who were activated in the Texas State Guard (federalized)

There are a number of other ham who are not listed who contributed with time and efforts, a long list of computer operators and family members.

We have as a team united 338 Families as of 1800 this date 19 Sept. 2005

The net will continue until all are exhausted and the children are reunited to families.

Our request has been made that NTX would ask that at least the H&W nets remain up. These modes are the only way we can get into the areas without internet.

|
| Hi all,
|
| Just to let you know that I have approx. 90 AR1200/NTD1000 TNCs, the
| ones with the buttons, serial port and printer, which I got for almost nothing from a company that was closing and wanted to get rid of them. if anyone from the list wants some, let me know, I'll actually give them away for the cost of shipping (from Spain). They are brand new but come with no manual - it's a basic TNC with the basic TNC commands.
|
| Back to basement-clearing, regards,
|
| Mike

Ham Radio software UPDATE:
MixW2.16 Beta 5 was released September 20, 2005.
However, it has NOT been authorized for general re-
distribution yet, and is currently being tested by the
MixW Beta Team.

I am pleased to report that MixW2.16 Beta 5, has the
new OLIVIA digital mode included in it, and so far all
the tests I've made indicate that it works very well!

Enjoy Ham Radio!

1698. Fw: [CTDXCC] Wind Predictions for Austin Friday, Saturday, Sunday

Subject: [CTDXCC] Wind Predictions for Austin Friday, Saturday, Sunday

Greetings,

Based on the latest projections, here are the predictions for wind in
our
area. Model is centered on northern Hays County/Southern Travis
County, but
a check of northern Travis county shows it is essentially the same.
Will
update tomorrow and Friday if necessary. All times local.

Friday

0700, 7 mph, NNE (026)

1000, 9 mph, NNE (030)

1300, 11 mph, NE (034)

1600, 11 mph, NE (036)

1900, 9 mph, NNE (032)

2200, 9 mph, NNE (024)

Saturday

0100, 13 mph, NNE (014)

0400, 25 mph, NNE (012)

0700, 36 mph, N (008)

1000, 38 mph, NNW (348)

1300, 38 mph, NNW (328)

1600, 40 mph, NW (312)

1900, 38 mph, WNW (296)

Sunday

0100, 13 mph, NW (310)

0700, 11 mph, W (280)

1300, 7 mph, WNW (290)

1900, 5 mph, NW (322)

The latest models for rainfall are only calling for 3-4 inches, but
that
could come quickly.

73,

Don AD?K

John,

Where did you find those predictions? Those look a lot better than what I thought would be happening up here in the Fort Worth area.

Paul

Guys just before I left Mississippi I checked with their Weather Ops and ask
them what it looked like Central Texas would get from Rita. They told me
that based on the models Central Texas could expect 80MPH winds with higher
gust.

Not sure if this is still the case or not.

> Right now, I would honestly think those estimates are grossly underestimated. I would safely add 2 inches of rain to the total, and add about 20-30 mph to the wind speeds.

those are sustained winds. i assume you are talking peak winds which the nws has increased in the past four hours:

Saturday Night: Showers and thunderstorms likely. Mostly cloudy, with a low near 66. Windy, with a north northwest wind 50 to 55 mph decreasing to between 30 and 35 mph. Winds could gust as high as 70 mph. Chance of precipitation is 70%.

i am trying to figure out where to park my un-garaged car ... should i leave it in my tree lined driveway, or park it in the middle of some empty parking lot. roll of the dice i guess. cul, john

No, I was talking about sustained winds. But now, since the track of Rita has not been shifted a bit eastward...those original forecasts are now looking a bit more accurate. The winds won't be quite as bad, but the rainfall potential is still there.

Warren / WR1TX

1707. Ham Volunteers Needed

Yahoo group: Temple_ARC
Date: 2005-09-22 13:47:26 UTC
From: K5DOA@aol.com
Topic: 1707 Message: 1707

Gary Duwrell has put out the call for all area hams, whether club members or not, to assist in communications related to four area shelters that are already taking evacuees from the area affected by hurricane Rita. Things are developing rapidly and volunteers are needed as early as today and throughout the next few days.

The four centers will be located at:

The Expo Center in Belton (affect on the fest is unknown at this time)

The Gilmore Center in Killeen

The Wilson Center in Temple

The First Baptist Church in Belton

It is anticipated that there would be two shifts daily running from 8 to 8. Gary will be keeping the roster and making assignments.

The relief center operations will be carried out on the 147.14 repeater. The W5LM repeater wil be available to support operations as required. However, at Gary's request, we are keeping it open to support mobile traffic on I-35. Please use caution to leave plenty of time between transmissions to allow breakers or priority traffic.Also be prepared to offer assistance with directions etc. to passing mobiles. There may also be Skywarn related activity on both repeaters. If the status of the W5LM repeater should change, we will make the announcement both on the repeater and on this reflector.

If you can volunteer to support this effort, call Gary Duwrell at the EOC. His number is 254 - 933 -5592.

1711. Re: Wind Predictions for Austin Friday, Saturday, Sunday

Yahoo group: Temple_ARC
Date: 2005-09-22 15:10:47 UTC
From: john, ke5c
Topic: 1711 Message: 1711

rita's future behavior is being forecast by a number of sources. i'm going to weigh most the national weather service. they have the most resources (which doesn't guarantee anything) but they did remarkably well on katrina. the nws has an experimental wind forecast page:

http://www.nhc.noaa.gov/text/refresh/MIAPWSAT3+shtml/DDHHMM.shtml

which, once you figure out how to read it, provides a logical way to look at the data. forecasting is probablistic ("there is a 40% chance of ..."). this forecast is for the probability of winds occuring at each of three speeds at different locations during several 12 hour forecast periods. two probabilities are given: first, that winds of that speed will begin/occur during a given 12 hour interval and the cumulative probability up to and through that interval. the speed levels are 34 knots/39 mph ("tropical storm"), 50 knots/58 mph, and 64 knots/74mph (hurricane).

the current forecast for austin during the next 120 hours gives a cumulative probabilies for:
39 mph winds = 42%
58 mph winds = 13%
74 mph winds = 7%

the highest probability period is 06Z Sat to 06Z Sun:
39 mph = 19%
58 mph = 9%
74 mph = 6%

Windspeed in MPH:

0 Calm Smoke rises vertically
1 - 4 Light Air Direction of wind shown by smoke but not by wind vanes
4 - 7 Light Breeze Wind felt on face; leaves rustle; ordinary wind vane moved by wind
8 - 12 Gentle Breeze Leaves and small twigs in constant motion; wind extends light flag
13 - 18 Moderate Breeze Raises dust and loose paper; small branches are moved
19 - 24 Fresh Breeze Small trees in leaf begin to sway; crested wavelets form on inland water
25 - 31 Strong Breeze Large branches in motion; telephone wires whistle; umbrellas used with difficulty
32 - 38 Moderate Gale Whole trees in motion; inconvenience in walking against wind
39 - 46 Fresh Gale Breaks twigs off trees; generally impedes progress

47 - 54 Strong Gale Slight structural damage occurs; chimney pots and slates removed
55 - 63 Whole Gale Trees uprooted; considerable structural damage occurs
64 - 72 Storm Very rarely experienced; accompanied by widespread damage
73+ Hurricane Devastation occurs

1712. Echolink Coverage for all Central Texas Area

Wide Area Echolink Coverage on W5BEC Repeater 147.140MHz PL 123.0Hz

The Echolink connection to the National Weather Service Office in Ft. Worth will be activated by the Hams at NWS when needed.

Spoke with the hams at NWS Wednesday during the tour of NWS, and they are ready to take storm & damage reports for the Central Texas Area.

The N5ZXJ 145.310MHz PL 123.0Hz repeater in Temple is also available for Emergency Comms in the area.

The 14 and 31 machines are tied into Emergency power as is the Echolink computer/radio on the 14.

ONLY REQUEST IS THAT IF YOU ARE REPORTING WEATHER RELATED TRAFFIC. BE PRECISE AND SPECIFIC. DON'T REPORT THE WIND JUST STARTED BLOWING OR THE RAIN JUST STARTED FALLING. ONLY REPORT SIGNIFICANT AMOUNTS OF EITHER WIND, RAIN, OR LIGHTENING. HAIL REPORTS OF DIME AND ABOVE ONLY PLEASE.

ALSO -- PLEASE ALLOW THE 147.140 REPEATER TO DROP OUT COMPLETELY BETWEEN REPLIES. SO THAT YOU DON'T TIME OUT THE SYSTEM. ALLOW AT LEAST 2-3 SECONDS BETWEEN REPLIES.

ALLOW THE ECHOLINK

1716. question regarding the PL tone on 14 machine

Yahoo group: Temple_ARC
Date: 2005-09-23 02:21:17 UTC
From: Gerald L. Richmond - N5ZXJ
Topic: 1716 Message: 1716

147.140 W5BEC Repeater has a 123.0 PL

Has coverage from the East / West IH 35 split down into Austin, over towards Hiway 6, and over to Lampassas...

Coverage is about 17,000 square miles, give or take a Thousand. Has extremely great coverage.

Any questions regarding the repeater, contact me via email Or contact Joe Dorn W5VEX via the 14 repeater.

n5zxj@...

Any questions, Gerald Richmond

1721. update - Wind Predictions for Austin area

Yahoo group: Temple_ARC
Date: 2005-09-23 13:25:48 UTC
From: john, ke5c
Topic: 1721 Message: 1721

the wind forecast for our area continues to encouragingly improve:

yesterday (thursday am) the 120 hours forecast for austin gave
cumulative probabilies for:
39 mph winds = 42%
58 mph winds = 13%
74 mph winds = 7%

now (friday am) for the next 120 hours:
39 mph winds = 31%
58 mph winds = 5%
74 mph winds < 0.5%

the highest probability period remains 06Z Sat to 18Z Sun:
39 mph = 13%
58 mph = 3%
74 mph = <0.5%

1722. Madie Eidson - Update

Yahoo group: Temple_ARC
Date: 2005-09-23 21:05:13 UTC
From: Steve S. Bosshard
Topic: 1722 Message: 1722

I just visited with Nadine Gibson, the daughter of Merill and Madie Eidson just a few minutes ago. Merill (W5AMK SK) wrote the TARC History that is on the tarc.org website and his wife Madie (W5DQF ?) was with him at TARC club meetings as long back as I can remember. Both Nadine and Madie have let their licenses lapse, and Madie is now 95 years old and getting forgetful but in good health otherwise. Nadine works for the Temple ISD and still knows Morse. Ironically, Merrill's call sign still shows up on QRZ.com.

It is really easy to forget the hams who helped advance the art to the state it is now in. Just a reminder,

Steve

From: "ARRL Web site" <memberlist@...>
To: <ke5c@...>
Sent: Saturday, September 24, 2005 4:52 PM
Subject: Rita update - from Jerry Reimer, KK5CA

From Jerry Reimer, KK5CA, South Texas:

This message is endorsed and forwarded by Jerry Reimer, KK5CA, ARES Section Emergency Coordinator for ARRL South Texas Section.

This request is sent to the ARRL North and South Section Managers, who are requested to send a special e-mail to the ARRL membership in their respective sections.

==========

Harris County TX EOC requests a traffic count from counties along the major traffic routes leading into the Greater Houston area.

The traffic routes of interest are:
- U.S. Highway 59 (Humble, Kingwood, Porter, Cleveland, Livingston, Lufkin)
- Interstate Highway 45 (Spring, The Woodlands, Conroe, Huntsville, Madisonville, Buffalo)
- U.S. Highway 290 (Cypress, Waller, Hempstead, Chappel Hill, Brenham)
- Interstate Higheay 10 (Katy, Brookshire, Sealy, Columbus)

Radio clubs and ARES? groups in each of these areas are asked to form teams of local operators to report Houston bound traffic volumes by counting the number of cars on these routes for a 6 minute period, once per hour. The count is to be reported by one individual in the identified area who has internet access. This individual is to collect the information using local club repeaters and operators assigned to perform the count. ONE single report (reporting the past three hourly 6 minute totals) from each of the above locations should to be sent at 3 hour intervals: 09:00 AM, 12:00, 15:00 PM and 19:00 PM (all CDT), ONLY. ONLY ONE report from each location at the assigned times. No report is to be made after the 19:00 report. Please make these reports daily until asked to terminate reporting (probably one week).

Reports are to be sent to: jcornel @ houstontranstar.org (Subject: Traffic Report: "Location named above") beginning with the 09:00 report

on Sunday morning, covering the periods 6, 7 and 8 AM.

The first paragraph can be used on the NTX and STX ARES net by adding contact information within the section for disseminating the instructions.

Ham Radio software UPDATE:

WSJT Meteor Scatter Beta Version 5.8.6,
Released September 23, 2005.

WSJT is a weak signal communications program which
supports five operating modes-- FSK441, JT65, JT6M,
CW, and EME Echo mode. The WSJT Version 5.8.6
Beta release contains some changes which improve 5.8.3,
allowing some earlier problematic sound-cards to work.
Eventually, there will be a full release of WSJT 6.0.

Ed,

Just to give you a heads-up on the JOTA frequencies, the
ARRL table shows 3740 and 3940 as both being VOICE frequencies
for 80m, but 3740 is NOT authorized for VOICE here in Region 2.
So please pass that along to anyone involved to make sure they
don't get caught up in operating voice on 3740.

Thanks,
Charlie Schlieper, N5TD

Subject: [Temple_ARC] Jamboree on the Air Oct 15

TARC,

We have again been invited by the local Scouts to participate with them in the annual Jamboree on the Air (JOTA), an ARRL-Scout event to show these young folk the pleasures, advantages, and benefits of ham radio. Our invitation is for 4 PM for 1 1/2 hours or so on Saturday, Oct 15, 2005, at the park between Nolanville, Harker Heights, Bus 190, and the railroad, where it was last year. I think this is called Pioneer Park, but more details on that will be available later.

Here is a clip from http://www.arrl.org/FandES/ead/ideas.html on JOTA:
JOTA 2005 Information
More information about ham radio and scouting

Who: Girl and Boy Scouts around the world

Where: Wherever you set up your radio!

When: October 15-16 (The JOTA begins on Saturday, at 0001 hours local time, and ends on Sunday, at 2359 hours local time.)

Scout Frequencies for JOTA 2005
band
phone (MHz)
cw (MHz)

80m
3.740 & 3.940
3.590

40m
7.270

7.030

20m
14.290
14.070

17m
18.140
18.080

15m
21.360
21.140

12m
24.960
24.910

10m
28.390
28.190

The ARRL suggests using 7.270 as the US JOTA frequency.

JOTA 2005 Possibilities
We have received a few comments referring to the possibility of using more SSTV during JOTA. Wouldn't it be great to send a picture of your girl and boy scouts to the troop they are talking with? These pictures would be a great addition to a scout scrapbook.

Demonstrate a simple 2-meter HT and mobile rig. It is much easier for scouts to see themselves owning this type of radio as opposed the "top of the line" radios. Remember to show both the scouts and leaders how ham radio will compliment the scout program. With a little guidance, a girl or Boy Scout leader will be able to work ham radio into several badges such as electricity, communications, and, of course, radio.

This is also an opportunity to discuss the value of a 2 meter HT while on a hike or field trip. I know from passed experience that scouts want to go at their own pace especially on a hike. With a few licensed ham/scouts in the group everyone will be able to keep in contact.

Martha, NU5R, and I plan to run a portable 20 M phone station there as we have done for the past few years. Your ideas and participation are heartily invited. This is a great opportunity to introduce some folk younger than we are rto ham radio. Please let me hear from you. Note my new email address - edw5lq@... .

73, Ed W5LQ

1735. I35 exit 250 construction Belton Hamfest weekend

Yahoo group: Temple_ARC
Date: 2005-09-28 14:13:03 UTC
From: john, ke5c
Topic: 1735 Message: 1735

This morning I spoke to the Austin public affairs office of the DOT. At this time a 90% chance exits of I35 being closed at exit 250 with traffic detoured to the service roads from 9PM Friday through at latest 6AM Monday for steel and concrete work above I35. A final decision will be made tomorrow (Thursday) when steel coming up from Galveston either does or does not arrive. The TxDOT website will be updated when the closure becomes definite:

http://www.dot.state.tx.us/hcr/textreader/default.htm select Construction-Williamson-IH0035 in the drop down boxes.

The highway information signs are updated about 7 days before planned closures and, according to I35 drivers, are now announcing this closure.

*** Could someone from the Georgetown area email me some suggested work-arounds for folks coming up Saturday to the Belton Hamfest ***:

I stayed on the air thru the storm. Kinda lonely though no local hams till
Friday when they all started to return because of Grid-Lock... This was not a
good test of GCEM evacuation plan. People died, dogs died in cars, "nowhere
to go, noway to get there, nothing to do when there" Temperatures in the cars
were over 110 degree.
Houston would not honor Galveston's evacuation plan at all. I-45 was not
reversed, traffic was allowed on the highway before Galveston county got done...We
were forced to return to the eye of a possible hurricane.
All "attempting to evacuate" have said never again!!!! Mandatory or not!!!!
BAD PLANNING by our officials ....DPS refused to send enough officers to
handle traffic.
A MESS brought to you by our electical officials.

Subject: OPERATORS NEEDED IN EAST TEXAS

Everyone on this list lives in Texas and registered on the
Rita.ab2m.net
database. Please review the two items below. If you have the
necessary
equipment, if you are available for deployment, and if you are willing
to
accept one of these assignments, please send me the appropriate
reply. Including the soonest date you could be there, and the last
date
that you could stay. If you are unable to accept either of these
assignments, a reply is NOT necessary. I thank you.

Jerry Reimer, KK5CA
ARES? SEC, ASM, South Texas
Eve - 281-353-0810
Day - 281-871-4321
Cell1 - 281-610-2308
Cell2 - 281-222-3846
Pager - 281-551-0235

JASPER, JASPER COUNTY, TX

The Salvation Army needs five (5) Amateur Radio operators with mobile
HF
(80/40) SSB to assist with daily food distribution in the area of
Jasper
TX. Operators will need to provide their own
sleeping quarters (tent, RV, travel trailer, etc). Most of the work
is
outside in high humidity and temperatures. People with medical
problems
that could become severe in these conditions should not volunteer for
this
assignment.

The food that The Salvation Army provides to storm victims from their
mobile canteens is also the food eaten by their workers. The task of
Amateur Radio operators is to help The Salvation Army efficiently
distribute their food to everyone who needs it. Some areas have few

people
show up for their one meal of the day (around 2 PM), while other areas
may
run short of food. Some operations, such as schools, are cooking all
the
food in their freezers, lest it spoil in the absence of electricity.
This
temporarily eliminates the need for food distribution by The Salvation
Army. At one food station this week, the request was for enough food
to
feed 5,000 people.

The Salvation Army operations center is at at the Jasper fire
department,
205 E. Water Street, in Jasper. Robert McWhorter K5PFE (ARRL South
Texas
section Assistant Section Manager) lives there and is coordinating
this
request. K5PFE and KI5WT are available on 146.52 MHz simplex in the
Jasper
area.

The roadblocks into Jasper have been removed. Gasoline and diesel
fuel
remain in short supply. The Salvation Army is providing priority
fueling
cards for their workers, which includes the volunteering Amateur Radio
operators. It gets you access to the fuel, but you still have to pay
for
it.

Amateur Radio operators interested in helping with this relief task
should
send an e-mail to the Section Emergency Coordinator, KK5CA (kk5ca at
arrl.net) with the subject of JASPER.

HEMPHILL, SAN AUGUSTINE COUNTY, TX

Four to eight (4 minimum, 8 desired) ARES-trained operators are needed
to
stay for one (1) week minimum, with the requirement likely to continue
for
several weeks (need 4-8 people each week for several weeks). They
will be
supporting FEMA coordinated disaster relief operations with mobile HF
SSB
and VHF FM. At present, the UHF FM system is down, but this may be
repaired soon.

The request is for "self-contained" operators, meaning providing their
own
shelter (tent?), water, and some to all their food for a one-week

period. It may be possible to put your cot in K5QE's contest station for sleeping. Most of the work is outside in high humidity and temperatures. People with medical problems that could become severe in these conditions should not volunteer for this assignment. The contact person in the area is Marshall Williams, K5QE.

Amateur Radio operators interested in volunteering for this assignment should send an e-mail to the Section Emergency Coordinator, KK5CA (kk5ca at arrl.net) with the subject of HEMPHILL.

1744. Packet Digipeaters 145.59 MHz

Yahoo group: Temple_ARC
Date: 2005-09-30 03:49:23 UTC
From: Charlie Schlieper
Topic: 1744 Message: 1744

Two new 1200b packet digipeaters are now on-the-air.

1. TEM/TEMKA 175-ft tower 145.59 MHz (Temple)

2. GAT/GATKA 180-ft tower 145.59 MHz (Gatesville)

Both of these systems seem to have good coverage. Give them a try sometime if you have packet. Remember, you no longer have to have a TNC (Terminal Node Controller) to operate packet. All that is required is a COMPUTER, RADIO, and a Sound-Card Interface. Free software is also available-- such as UISS and AGWPE. MixW Version 2.16 Beta 5 is an excellent choice, and easy to setup and use. There are other available packet TNCs at swap fests that can be found at a bargain price! Two popular TNCs to look for are the Kantronics KPC3 Plus, and 9612 Plus.

Enjoy Ham Radio!

Charlie,
I would like to get back into packet but strictly sound card operation.Since
It has been a while I may have some dumb questions to ask.
Is it possible to use a Parallel to DB9 adapter ?
I have not check the back side of my computer if I have a parallel or serial
port?
My 9 pin port is utilized by something else.
Thanks,
Glenn Blum

1751. RE: [Temple_ARC] Packet Digipeaters 145.59 MHz

Yahoo group: Temple_ARC
Date: 2005-10-01 08:28:59 UTC
From: Steve Bosshard (NU5D)
Topic: 1744 Message: 1751

Hello Bill,

When Tucson Amateur first developed AX25 packet in the mid to early 80's it was primarily used for error free communications between ham stations and wide area comms using the digipeat function.

It was not uncommon to have a 2m qso across several states.

We has one of the first wide area digi's when we, KE5C and I, installed a 145.01 / 145.03 digi on the Channel 6 TV tower with the 72 repeater.

Anyhow APRS came much, much later, but the primary use was error free communications, file transfer, and mailboxes. Charlie N5TD has operated TBOX as an area mailbox for many, many years. Also, packet can run 9.6KB for better through put, but it requires a little more technical expertise than the microphone / speaker / PTT hookup for 1200 baud.

Hope this answered your questions.

Also Glenn, you can probably find a hardware TNC at Belton for a little of nothing. Additionally I posted FREE tnc's (cost of shipping) here about two weeks ago. But concerning sound card based tnc's Charlie would be the man.

73 es hpe to c u at Belton tomorrow,

Steve
NU5D

You know what is very disapointing, after two years I was looking foward to the hamfest and this morning at 630 I get a call to go to work. I just got home a few moments ago.
Anyways I have already downloaded AGWPE and UISS now I have to dig out my radio to computer interface.
Now talking about a usb/searial port adapter, Charlie, which one would you suggest?

1754. Fw: [WCARC] Mobile operators for Jasper still needed

Yahoo group: Temple_ARC
Date: 2005-10-02 22:41:22 UTC
From: John (KE5C)
Topic: 1754 Message: 1754

looks like a shortage of emergency hf ops.

----- Original Message -----
From: "Tom Whiteside" <tomw@...>
Sent: Sunday, October 02, 2005 3:58 PM

NQ5L and W5VGJ are back from Jasper and KI5DR has headed in. They need more HF mobile operators there by noon tomorrow if someone is available - contact me if you can help.

We are getting precious few volunteers up there from across the state. Infrastructure is so torn up in some places that VHF is just not much help and most of the mobile ops are only able to do that. We had two up there until yesterday and KI5DR is heading in this evening but more are needed post haste! Lots of fuel, food and a place to stay at night.

Tom Whiteside N5TW

1756. usb/serial adapters

Yahoo group: Temple_ARC
Date: 2005-10-04 11:03:15 UTC
From: Glenn Blum
Topic: 1756 Message: 1756

The may seam a little off topic at first but my message does reflect for digital modes.
Charlie (n5td) yesterday I had a little time to sit down and search out for USB/serial port adapters. Wal-Mart and Bestbuy no longer carries them. However radio shack does. The radio shack item is a 6 foot cable for 40.00 dollars. Would this item be expectable for digital modes with sound card operation?

Thanks,
Glenn Blum

1759. Jamboree on the Air -- Oct 15

Yahoo group: Temple_ARC
Date: 2005-10-04 18:43:40 UTC
From: Ed Underwood
Topic: 1759 Message: 1759
Attachments: 3 described; binary payloads are missing from this source WARC

TARC,

This is a reminder that the Scout Jamboree on the Air (JOTA), an ARRL-sanctioned event will occur eleven days from now Saturday, October 15, starting operation at 4 PM. The location is Pioneer Park (I think the name is correct) where it was held last year, and the map below shows the correct location. The actual driveway entrance is slightly north of the star on this map, and is a dirt driveway heading west about 100 feet south of and parallel to the railroad. Set-up should be complete by 4 PM.

Martha, NU5R, and I plan to operate a 20 meter SSB portable station to demonstrate ham radio to the scouts, and other portable, mobile, or whatever displays of ham activities would be really good for the Scouts, and is a great opportunity for us to demonstrate ham radio to these young folk. Please see my email to the reflector of 9/20/2005 at around 6 PM for more info. ARRL has info at http://www.arrl.org/FandES/ead/ideas.html and at other pages there.

Since JOTA is an international event, the ARRL has listed 3740 kHz as a phone operating frequency for DX locations. We can, of course, listen to DX phone operations there, but must not transmit there. 3940 kHz is the suggested starting frequency for US operation for 80 meter phone.

Please let me hear from you if you can participate. Note that my new email address is edw5lq@...

I feel stupid, I never check circuit city.
Why I want a usb/serial port adapter? This allows me to run 2 radios at one time. I started back into packet this weekend. I am strictly running from a soundcard.
For those who I had contacted this weekend.. My operation will only be weekend untill I get AGWPE and my terminal programs running right and during the week I have no time since work always prevails.

From Leon, k5zzm k5zzm@...

Last night Carolyn, Kd5glm, talked to one of the thousands of people who still don't know where their loved one is.....
"I talked to Julie last night and her mother Penny Kraus is still missing. The last time Julie talked to her was the morning the Hurricane struck....she knows the house had 12 feet of water and was rising...she may have been washed out to sea...she asked for help.....please help find her mother."
Folks there is only a handful of us who are STILL LOOKING !!! We need help!!! It will require about 2 hours of your time just to clear the safe lists on the data base and maybe a phone call or two. Why us?? Because they need help and so far our group of volunteers have found over 800 missing people. Please call or email me and volunteer just 2 hours and make a life change.
Thanks to all who answer this CQ

From: John (KE5C)
Topic: 1770 Message: 1770

talk about perfect timing: i checked my email upon arriving home after richard's internet security talk this evening at the club meeting to find the following in my in box. this is a phishing attempt, and ebay users are often targeted. while at first glance the url i am supposed to click looks like ebay, mousing over it reveals the real url:

http://218.157.73.106/.scgi.ebay.com/ws/eBayISAPI.dll/VerificationEnterInfo/siteid/

at second glance, even this looks sort of okay, but a numeric ip in a url is indeed a huge red flag. a dns lookup of this domain shows it to be located in korea. ebay and paypal need to know if this happens to you. forward any such emails to spoof@... or spoof@.... do not forward as an attachment since some tracking information is lost if you do that, just forward it. 73, john

Place or Update Credit Card on File

Dear eBay Customer ,

This is your final warning about the safety of your eBay account. If you do not update your billing informations your access on eBay will be restricted and the user deleted. This might be due to either following reasons:

- A recent change in your personal information (i.e. change of address)
- Submiting invalid information during the initial sign up process.
- An inability to accurately verify your selected option of payment due an internal error within
our processors.

Your credit card on file with eBay

Card number:XXXX-XXXX-XXXX-XXXX (Not shown for security purposes) Expiration date: 11/05

Please sign in to your eBay account and update your billing information:

http://signin.ebay.com/eBayISAPI.dll?SignIn&ssPageName=h:h:sin:US

If your account information is not updated, your ability to sell or bid on eBay will become restricted.

Thank you,
eBay Billing Department

these are apparantly really common from the feedback i'm getting. i thought i was being singled out. ebay must get thousands of forwards from folks like us. i'm hoping they do something with the amalgamated information, like at least notify the domain registrars. that would be interesting to know, but they probably won't tell. cul, john

John,

I always forward these things to eBay and so far all I have gotten is automated responses saying "don't go there". Oh well, the world is full of lazy scumbags to lazy to work for a living.

talk about perfect timing: i checked my email upon arriving home after richard's internet security talk this evening at the club meeting to find the following in my in box. this is a phishing attempt, and ebay users are often targeted. while at first glance the url i am supposed to click looks like ebay, mousing over it reveals the real url:

http://218.157.73.106/.scgi.ebay.com/ws/eBayISAPI.dll/VerificationEnterInfo/siteid/

at second glance, even this looks sort of okay, but a numeric ip in a url is indeed a huge red flag. a dns lookup of this domain shows it to be located in korea. ebay and paypal need to know if this happens to you. forward any such emails to spoof@... or spoof@.... do not forward as an attachment since some tracking information is lost if you do that, just forward it. 73, john

Place or Update Credit Card on File

Dear eBay Customer ,

This is your final warning about the safety of your eBay account. If you do not update your billing informations your access on eBay will be restricted and the user deleted. This might be due to either following reasons:

- A recent change in your personal information (i.e. change of address)
- Submiting invalid information during the initial sign up process.
- An inability to accurately verify your selected option of payment due an internal error within
our processors.

Your credit card on file with eBay

Card number:XXXX-XXXX-XXXX-XXXX (Not shown for security purposes) Expiration date: 11/05

Please sign in to your eBay account and update your billing information:

http://signin.ebay.com/eBayISAPI.dll?SignIn&ssPageName=h:h:sin:US

If your account information is not updated, your ability to sell or bid on eBay will become restricted.

Thank you,
eBay Billing Department

1773. RE: [Temple_ARC] Fw: Update Your Billing Informations

Yahoo group: Temple_ARC
Date: 2005-10-07 14:03:41 UTC
From: Benton Goodnight
Topic: 1770 Message: 1773

John, I get a couple every day. If not from ebay (fake) then from Pay Pal, CitiBank, or other large banks (which I do not even have an account with). When ebay really sends you a note, they will inform you to log on to ebay in your normal way and check your account. That eliminates any chance of fraudulent short cuts.

It is a shame that our world has gotten this way, I guess it just shows that you have to stay on your toes!!

Benton Goodnight KE5DMW

1778. Fw: fists 2005 fall sprint summary for ke5c

Yahoo group: Temple_ARC
Date: 2005-10-09 04:53:49 UTC
From: John (KE5C)
Topic: 1778 Message: 1778

i did something different for a while this afternoon. i've been a fists member off and on for several years, but i finally operated part-time in one of their four hour sprint contests - http://www.fists.org/sprints.html . the turnout was pretty low, probably because they run it from 1700 to 2100 z on a fine, football, fall afternoon. sure, some serious contests span saturday afternoons, but those are longer contests which must span the afternoon. this is a four hour operating event which could just as easily be run in the evenings. but anyway, that is probably tradition, like crying over the vanishing code requirement. the average speed was around 20 wpm, some slower, some faster. the exchange is a lot like the na sprint, and it is as much an event as a contest, but i felt useful making slower qso's feeling i might be training and practicing some future contesters. it seems to be tradtion to say "tu his/her-name" after each qso, and there is a lot of "r" and "qsl" exchanging also to confirm that a qso was made - something that would be understood in most contests by virtue of no request being made for fills. i notice last fall that w5ta and ks5v participated too. i'll bet others from the area have snuck in a time or two also.

----- Original Message -----

entry class: qro (100 watts)
qso points: 281
multipliers: 25
final score: 7025
name: john dvoracek
call: ke5c
fists: 7295
address: 3521 shallow ford rd, temple, tx 76502
mults:
AZ,BC,CA,CT,DE,FL,GA,ID,IN,MN,MT,NC,NJ,NS,NY,OH,ON,OR,QC,UT,VA,WA,WI,WV,WY
comments: my first part-time fists sprint. i think you would have a lot better participation if this contest was not at such an unwieldy time of a fall, fine weather, football afternoon. why not saturday or sunday evening?

73, john

Hello all, just wanted to say how nice it is to see and hear packet activity again in the area. I made a contact with Charlie N5TD this morning. I am located about 60 or so miles from Temple to the ESE. If I can make it, anyone can! I miss the days when we had activity other than APRS. I doubt it will ever come back like it was, but if you have an old TNC in the closet, a spare comm port, and an extra radio, give it a try AGAIN. Glenn KD5DGA is using a "software TNC". Charlie has been experimenting with several versions of them, and I'm not sure what Steve NU5D is using. There is a method for everyone! By the way, you can even send pictures of sorts via Packet. I just have to remember how all of this works! Get on, and re-learn with the rest of us!!

I am completely new to packet.
I see the freq 145.590.
I am in Waco Tx.
Should I be able to hear something on 145.590?
I hear nothing!
Is there a time that would be better for me to monitor?
I would like to figure out what is going on.
I will take suggestions.
How can I connect? What do I need to do. Is Email an option?

1781. Azle Ham Fest

Yahoo group: Temple_ARC
Date: 2005-10-09 19:34:05 UTC
From: Paul Finch
Topic: 1778 Message: 1781

Hello All,

Just a quick note, the Tri County Amateur Radio Club is having their annual Ham Fest in Azle, Texas November 12th, 7 Am to Noon. The Ham Fest will be held at the Emanuel Building next door to the Azle Police Station and Public Library. From Temple, take I 35W North to I 20 West around to 820 North. 820 North to 199. Take 199 Northwest to the Denver Trail exit, go through the Stop sign to the top of the hill. As soon as you pass the Police Station and the Library the next driveway to the right will take you to the Ham Fest.

Coming from Springtown, take 199 Southeast to the Denver trail exit, stay in the left lane on the access road and take the "U" turn under the freeway. Go up the hill. As soon as you pass the Police Station and the Library the next driveway to the right will take you to the Ham Fest.

If you have any question please email me at wb5idm@... .

Thanks,
Paul

From: Paul
Topic: 1779 Message: 1782

Hello Bill,
Do you have a TNC for your radio to start on packet? If not, there are a couple of options... One is to look around, and find an inexpensive TNC, or ask the folks around Waco if they have one you can borrow to try it out. The other is to use software and your soundcard.
With the TNC, you will need a program of some sort to be able to see what is coming across, and to send messages. I have used Procomm in the past, and currently use paKet 6.2. The TNC acts a bit like the telephone modem's do, but have some extra frills. The TNC takes your commands, and "converts" them to something the radio can use, and we can read out here. It also handles switching between xmit and rcv for you inside the little box.
With the soundcard, you have to have a compatible soundcard, a small and easy switching circuit, and of course the software. N5TD (Charlie) is the one I am familiar with, who has worked through all phases of packet, and is always experimenting with new software. He would be one of the "Elmer's" you should enlist for the soundcard packet. He's in Temple, and if you can get on the TARC repeater (146.820), give him a call. Steve NU5D is another one who is up and running with a Node or two for us.
There is a Node in Temple, and one in Gatesville. I am able too get into Temple most of the time, and use an Alinco DR-110 (about 30 watts), and an 11 element beam at about 30 feet. If you "listen" to 145.590, you will hear the "packet racket" burping back an forth either as folks are communicating, or when the Nodes and stations I.D.
There are many aspects of packet. We used to have BBS' all around, and a lot worked much like the old land line BBS' did before the internet came to light. There was info, files, and e-mail on there. I could send messages around the world using a Commodore C-64, and an HT on a groundplane thanks to the many BBS', and the sysop's who kept them going. We did, and once again are having chat sessions from keyboard to keyboard. Just like voice, but neater!! With packet, I can get into Temple pretty regular. Voice is not so easy.
If you have any other questions, feel free to post them, contact me, or any of the others.
73,
Paul N5XMV

1783. JOTA This Saturday

Yahoo group: Temple_ARC
Date: 2005-10-09 22:47:22 UTC
From: Ed Underwood
Topic: 1783 Message: 1783

TARC,

The local Scouts have again invited us to participate in their Jamboree on the Air (JOTA) on Saturday, Oct 15, just 5 days from now. It starts at 4 PM and goes for only 1 1/2 hours or so, and is held at their weekend campout spot, Pioneer Park, located conveniently between Harker Heights and Nolanville, north of Business 190 and just south of the railroad tracks. Martha, NU5R, and I will be demonstrating a 20 M portable SSB station, and any other type of demonstration of ham radio suitable for the Scouts is encouraged and invited. Charlie, N5TD, suggests that any demonstration tying ham radio and computers would be most interesting to the Scouts.

If you can help in any way, like even helping set up a station or display, please contact either me or Charlie. Thanks.

73,
Ed, W5LQ
254-793-3767

Below is a clip from:
http://www.arrl.org/FandES/ead/jota.html
What is JOTA?
When Scouts want to meet young people from another country, they usually think of attending a World Jamboree. But few people realize that each year more than 400,000 Scouts and Guides "get together" over the airwaves for the annual Jamboree-on-the-Air (JOTA). Modern technology offers Scouts the exciting opportunity to make friends in other countries without leaving home.

JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur (ham) Radio. Scouting experiences are exchanged and ideas are shared via radio waves. Since 1958 when the first Jamboree-on-the-Air was held, millions of Scouts have met each other through this event. Many contacts made during JOTA have resulted in pen pals and links between Scout troops that have lasted many years.

With no restrictions on age or on the number of participants, and at little or no expense, JOTA allows Scouts to contact each other by ham radio. The radio stations are operated by licensed ham radio operators. Many Scouts and leaders hold licenses and have their own stations, but the majority participate in JOTA through stations operated by local radio clubs and individual radio amateurs. Some operators use television or computer-linked communications.

Hello Bill,

I think your antenna is an OMNI up 60 to 70 feet?
And I have to assume it, and the transmission line, is in good
operating condition?

A suggestion for you to try is program your 2-meter
radio for the Gatesville repeater, which is 146.96 (no tone).
Since it is located at the exact same site as the Gatesville
PACKET digipeater, GAT/GATKA, it would be a good test
to see if you can hit that repeater.

Also, if you have any kind of BEAM for 2-meters,
then you might be able to hit TEM/TEMKA, here in Temple.

I can hit the Hillsboro repeater on 146.78 from my
location in North Temple, but I am using an array of four
13-element Yagis, fed with 1/2-inch heliax. So I guess that's
not a good comparison.

Hopefully, we can get you aboard with us on 145.59.
If all else fails, it may be with the addition of another DIGI up
in the Waco area.

73,
Charlie, N5TD

I did hit the 146.960 repeater.
I hit it using the lowest power setting.
on the 145.590 I did finally hear some sort of signal.
I started the terminal program and saw one entry.
I believe I saw n5td. Not sure.

I tried to connect and to I think it was QRA.
Got no response.
Tell me what to try next.

I believe I am set up with sound card software.

I hear only occasional signals on 145.590.

I have seen one packet show up on the terminal screen.

I could not figure out how to respond.

1792. soundcard packet on a budget

Yahoo group: Temple_ARC
Date: 2005-10-10 21:26:57 UTC
From: Glenn Blum
Topic: 1792 Message: 1792

Good afternoon,
Last week I decided to get back into packet but on a budget. This way I can get into packet without spending alot of money.
I have the existing equiptment available but this is what you are going to need.
1. VHF radio capable of running a soundcard to computer interface
2. soundcard interface
3. two freeware programs ,AGWPE as the packet engine and UISS as the terminal program.
I had found that UISS is the only AGWPE terminal program that will allow a non direct connect. IE unproto path like GATKA and TEMKA.
I suggest sending the freeware regestration for the UISS program. once you have your program key UISS will unlock some of its hidden features that at first I did not know of.
It took me two days to get my program key.
Uiss does have a real nice feature that N5TD and I had tried and that is UI-MAPVIEW. This allows you to see the position of another packet station using aprs positioning.
I suggest giving it a try.

From: Steve Bosshard (NU5D)
Topic: 1793 Message: 1793
Attachments: 2 described; binary payloads are missing from this source WARC

Wish there was a way to change your sound card settings when you launch sound card soft ware. Take a look at Quick Mix

http://www.ptpart.co.uk/quickmix/

This is freeware available on the net. QuickMix lets you save and recall settings for your favorite sound card applications.

Steve

NU5D

PS - Just set up 1200 Baud Packet on Mix W - easy to set up and seems to work nicely - has a nice waterfall display to boot. Also with both a hardware tnc and Mix W, the two can talk to each other for testing (provided you have 2 radios set up).

From: Carolyn Black
Topic: 1795 Message: 1795

Download site for the MMSSTV Slo-Scan Program:
http://mmhamsoft.ham-radio.ch/mmsstv/
TSGARC Webcam:
http://home.hot.rr.com/atv1/webcam.html
The Central Texas Slo-Scan ATV Group will be conducting an equipment swap net on Thursday evenings at 9:00 p .m. on the 147.24 repeater. The net is appropriately named "HAM HOCK" CORNER .
Join us by sending an email of the items you want to BUY, SELL OR SWAP and a brief description to w5tsgarc@...
The categories are:
1-Ham Radio Equipment and electronics
2-Computers and related items
3-Cameras, digital, video
4-Emergency equipment
Also if you have purchased some innovative piece of equipment that you would like to share, please include that as well.
This will be on voice, ATV, Slo-Scan and the Webcam so it will be a true "show and tell".....
See you on the net ,
Leon k5zzm

1797. JOTA AND PACKET

Yahoo group: Temple_ARC
Date: 2005-10-14 04:36:38 UTC
From: Harold Bates
Topic: 1797 Message: 1797

I am thinking about taking a packet setup to the JOTA event this week end and go thru my NODE LAMKA so the kids can see another mode of Amateur Radio I have a laptop, TNC, and radio and I might even try it out to see if I can get in with a rubber duck antenna. I know it is a stretch, but if it works I think it would make a impression on the kids. I hope that others will think about it and join in the packet fun. I will try to be on 9:30-12:00 depending on how many kids show up.

You might add SXV into your UNPROTO line to get more area, like this:
YOUR CALL>GAT>NU5D>TEMKA>SXV I hope you get the idea. I think you will, it goes thru digi's to the others to whoever you want. It depends what area you are it and if you can hit a digi.

I will be on 145.590mhz.

1798. Sound-Card Digital NOTES...

Yahoo group: Temple_ARC
Date: 2005-10-14 14:44:06 UTC
From: Charlie Schlieper
Topic: 1798 Message: 1798

With some DIGITAL MODES, it is important that your Sound-Card sample rate be calibrated. It not ONLY affects how you DECODE other signals, but also how YOUR OWN signal is decoded.

Recently, EA2AFR put out a Note reminding people that calibration could affect performance in the Olivia mode. He basically stated that it was critical to have your sound card sample rate calibrated for best performance.

I have helped other hams in my local area calibrate their sound-cards, with very noticeable improvements in their digital mode operation. If you need help in doing this, contact an Elmer that you know and trust to help!

Enjoy Ham Radio!

1802. RE: [Temple_ARC] JOTA AND PACKET

Yahoo group: Temple_ARC
Date: 2005-10-17 01:56:16 UTC
From: Steve Bosshard (NU5D)
Topic: 1797 Message: 1802

I read your packets. Means ur setup is pretty close.

I saw you were net control.

I tried to reply. May have needed to make your unproto setting, include v gat, sxv so that your reply packets would be repeated by Gatesville, and KB5SXV. He probably could not hear your directly from Waco to Lampasas.

I tried to connect. Same thing, c kb5sxv v gat, sxv

I tried to ask QRA.

I switched to com1 from com2.

I could not tell if I even transmitted. If you have a talkie, tuned to 145.590, you should hear your own transmitter and tones. Also, your transmit indicator should flash on your radio when you are transmitting.

Since you are receiving, you are pretty close. You might try and connect to yourself v gat - you can connect to your own station through a digipeater. Be sure you are sending packet tones by listening to yourself on a second radio. Also txd transmitter delay of abt 320 ms might be necessary to allow your transmitter to turn on before the terminal node controller starts sending tones. You may already be doing these things - just a brief check list meant to help you trouble shoot.

Best luck,

Steve

I am about ready to wait for a better time.

Bill

Date: 2005-10-18 14:53:33 UTC
From: john, ke5c
Topic: 1806 Message: 1806

my son, ad5rs, is going to put a dual band vhf/uhf rig in his car. i'm not at all up on these rigs, so i'm not much help. we read the eham net reviews, and while i'm sure some folks are happy with icom rigs, on the average, yaesu and kenwood owners were clearly happier.

he's leaning toward the kenwood tmg707a or the yaesu ft7800r. does anyone have any positive or negative experiences with either, or any reason one of the more expensive rigs is just too good to pass up, perhaps the new kenwood tmv708a although it's a bit pricey? thanks!

TMD700A KENWOOD 50W 2M/35W44/1200/9600 $499.99 - packet, aprs, etc.

TMG707A KENWOOD 50W 2M/35W 440 FM XCVR $269.99 - seems like a good basic rig

TMV708A KENWOOD 50W 2M/35W 440 FM XCVR $399.99 - the tmd700a without packet and without computer programming

FT7800R YAESU 50W 2M/40W 440 FM XCVR $269.99 - very positive reviews

FT8800R YAESU 50W 2M/35W 440 FM XCVR$ 389.99 - cross-band repeat, reviews say some buttons not backlit and hard to see/find at night

1807. Re: [Temple_ARC] your dual band vhr/uhf rig experience

From: Bill AC5BC Caldwell
Topic: 1806 Message: 1807

John,
I have been using the Kenwood TM-D700a w/ APRS. I enjoy using it for all VHF/UHF as well as connected to my GPS for APRS. If he is into gadgets he will love this radio. We have purchased two of them for use in our club trailer. It also holds lots of memory. The TM-D708a is just like it except for the APRS. They both are remote mount also. Check other reviews but this one he will enjoy.

1810. Planned Area Fox-Hunt (Hidden Transmitter Hunt)

Yahoo group: Temple_ARC
Date: 2005-10-18 16:52:00 UTC
From: RENE MILLER
Topic: 1810 Message: 1810

To: All Area Hams

From: Central Texas Slo-Scan and ATV Group

Date: Friday, October 14, 2005

Re: Planned Area Fox-Hunt (Hidden Transmitter Hunt)

We feel that it is High Time to have another Fox-Hunt! Therefore.

We would like to welcome you to join us on Saturday, November 12, 2005 in Waco for a Fox-Hunt.

For those who do not know what a fox hunt is.simply, someone hides an HT with an attached CW ID device (called the fox). The fox transmits at regular intervals. Any number of groups of individuals (one or two people to many per group) use their radio skills to attempt to locate the transmitter somewhere in Waco city limits. (Rules of the hunt to be published later.)

We are planning on meeting at a prominent Waco landmark (to be decided) at 10 am that morning. We expect to gather and begin at 10:30 am. We will hunt until all teams have found the 'fox' or until the remaining teams give up. We are expecting this to last not more than 2 hours.

After that, we would like to take a vote and move ourselves to a local restaurant to have a causal lunch to discuss the hunt, upcoming events or any other topic that comes to mind.

Our requirements for attending..NOTHING!! We welcome ALL hams, their families, friends and anyone who may be interested in becoming a ham!!

We do not discriminate against age, color, creed, geographic location, profession, zip code, hair color, or freckle count. We want EVERYONE to come and join in our fun!

Next Fox-Hunt is planned for sometime in March, 2006.

I have 3 of the Yaesu FT-8900. All work great!!...

Also have 20 of the Icom 2720's in different places over a 7 county area... and they all work very well.

Had the FT-8800 been out 3 months sooner, I'd have them instead since I don't plan to use the 6 or 10 meter sides of the radio

Subject: [Temple_ARC] your dual band vhr/uhf rig experience

my son, ad5rs, is going to put a dual band vhf/uhf rig in his car. i'm not at all up on these rigs, so i'm not much help. we read the eham net reviews, and while i'm sure some folks are happy with icom rigs, on the average, yaesu and kenwood owners were clearly happier.

he's leaning toward the kenwood tmg707a or the yaesu ft7800r. does anyone have any positive or negative experiences with either, or any reason one of the more expensive rigs is just too good to pass up, perhaps the new kenwood tmv708a although it's a bit pricey? thanks!

TMD700A KENWOOD 50W 2M/35W44/1200/9600 $499.99 - packet, aprs, etc.

TMG707A KENWOOD 50W 2M/35W 440 FM XCVR $269.99 - seems like a good basic rig

TMV708A KENWOOD 50W 2M/35W 440 FM XCVR $399.99 - the tmd700a without packet and without computer programming

FT7800R YAESU 50W 2M/40W 440 FM XCVR $269.99 - very positive reviews

FT8800R YAESU 50W 2M/35W 440 FM XCVR$ 389.99 - cross-band repeat, reviews say some buttons not backlit and hard to see/find at night

1821. Macro Tips MixW2.16 Beta 7

Yahoo group: Temple_ARC
Date: 2005-10-21 00:57:24 UTC
From: Charlie Schlieper
Topic: 1821 Message: 1821

1. Download the new BETA 7 Version of MixW2.16
URL: <http://mixw.net/beta/beta7/MixW216b7.exe>
2. Download the new ModeOlivia.dll and put it in your MixW folder
URL: <http://mixw.net/beta/beta7/ModeOlivia2.zip>
3. Find OLIVIA Mode in the MODE window, and select it.
4. Choose Mode Settings, and use default settings - 32tones, 1000Hz bw
Also you might want to check "Allow Manual Tuning" but keep it on
the spectrum 1000 for most contacts, using 14.10650, 14.10750, and
14.10850 MHz on 20m. (Manual Tuning will allow small corrections to
be made with the Mouse, if needed.)
5. Under HELP, the "QUICK START" selection will probably be of great
help in getting most people setup in MixW.
6. To use the new S/N Ratio, Sample Rate, and Freq. Offset features for
reports to the distant station, follow the following steps.
7. CREATE new MACROS as given in step 8. Use the CTRL Key to access
another layer of Macros, and the main set of macros will be reserved for
common QSO use.
8. Create three new MACROS, labled S/N, OFFSET, and RATE.
Inside the S/N Macro, type in the following text: (CR LF first)
S/N Ratio = <GET SN>
Inside the OFFSET Macro, type in the following text: (CR LF first)
Frequency offset = <GET OFFSET>
Inside the RATE Macro, type in the following text: (CR LF first)
Sample rate = <GET RATE>
(Using a Carriage Return Line Feed first on each created text
allows each Macro report to be sent out in a much neater format)
8. When you are receiving another station on OLIVIA mode, you can
hit each of these macros, and next time you xmit, it will give
the distant station reports on each item.
9. Create a Macro labeled CALL.
Inside the CALL Macro, type in the following text:
<CALL> de <MYCALL>
10. While you are receiving, hit the CALL Macro first, then each of
the three new SN, OFFSET, and RATE Macros, or any TEXT
you send, will follow respectively.
11. Create a Macro labeled CALL3.
Inside it, type in the following text:
<TX> <CALL> <CALL> <CALL> de <MYCALL> <MYCALL> <MYCALL> PLS K<RX>
12. You probably have a CQ Macro, but you may want to modify it.
<TX> CQ CQ CQ CQ CQ CQ CQ de <MYCALL> <MYCALL>
(just ONE line)
13. Create a Macro labeled PLS K.
Inside it type the text:
(several spaces in front) PLS K<RX>
14. This method is designed to give MAXIMUM flexibility in how you call

CQ. You can call CQ one time, two, or three times before ending.
Each time, when the CQ lines are finished, hit the PLS K macro to end.
15. Then create either a BTU macro, or call it TU. Both are used to mean simply "back to you."
An example:
BTU <NAME> <CALL> DE <MYCALL> <RX>
(again, I put at least ONE space in front to assure no words are ran together.)
16. I always rename my FINAL macro to "73"
An example:
TNX <NAME> and 73! <CALL> de <MYCALL> SK SK <RX>
17. Seems that everyone uses a short "BRAG" macro, which gives a brief rundown on RIG is... ANT is... Pwr is... Interface is... Computer is... (your choice, but don't get too lengthy)
18. I have others, such as "TEST" "AGN PLS" "QRZ" and even a few designed for contesting, but you can create whatever macros are best for you.

I hope these illustrated TIPS are of some help to others in setting up MixW.

Enjoy Ham Radio!

1824. ISS Packet 145.800/145.990

Yahoo group: Temple_ARC
Date: 2005-10-23 19:06:01 UTC
From: Charlie Schlieper
Topic: 1824 Message: 1824

The ISS Packet system is working fine again, for the moment.
Many stations were on this morning, but most were beacons.

WA6LIE, Salinas, CA N0AN, Ogden, IA
N8YO, St Joseph, MI KU4BL, Vincent, AL
AK4KO, Auburn, AL N0LRG, Candenton, MO
WA4AEJ, Niceville, FL K4IPH, Vandergrift, PA
KB1GVR, Ellsworth, ME AC4YC, Somerset, KY
KB4ZC, Galax, VA N5TD, Temple, TX

In the past, have suggested using three pre-programmed channels
to compensate for Doppler Shift, as follows:

Channel 1 RECEIVE 145.8025 XMIT 145.9875 (+185 OFFSET)
Channel 2 RECEIVE 145.8000 XMIT 145.9900 (+190 OFFSET)
Channel 3 RECEIVE 145.7975 XMIT 145.9925 (+195 OFFSET)

Channel 1 is used when the ISS is approaching your location,
Channel 2 is used when the Doppler Shift is almost ZERO, and
Channel 3 is used when the ISS is descending from you.
(This depends on the particular PASS orientation, and your need.)

I chose +/- 2.5 kHz experimentally, and discovered it works very
well at keeping you within the packet decode window on 2-meters.
(The maximum Doppler shift on 2-meters is only about 3.3 kHz.)

I'm sure if you just tried using ONE single channel (CHANNEL 2)
you could still have fairly good success in working the ISS pkt,
as we're not dealing with extreme limits on Doppler shift all the
time during a typical pass.

The most difficult thing on some 2-meter radios, is figuring out
how to program a SPLIT FREQUENCY CHANNEL, with 190kHz
+ OffSet, 145.800 Receive and 145.990 MHz Transmit.

Enjoy Ham Radio!

1825. Fox-Hunt

To: All Area Hams
From: The Central Texas Slo-Scan ATV Group
RE: The Fox-Hunt, 10:00 a.m. Saturday, November 12, Waco

We welcome ALL hams, their families, friends and anyone who may be interested in becoming a ham!! Come and join the fun!
1 Everyone who plans to hunt meet at the old Target parking lot on Hwy 6 at 10:00 am
2 Each hunting team must sign in and start the hunt from Target.
3 The hidden transmitter will be within the Waco City Limits on public property
4 The hunt frequency will be 146.565 MHz. Hidden transmitter will transmit for 20 seconds followed by 20 seconds of silence.
5 The hunt will start at 10:20 am and end on or before 12:20 pm
6 At the hidden transmitter will be an envelope containing First, Second, Third and Fourth place certificates.
7 As hunters find the hidden transmitter they take the highest certificate available returning to the starting point where their certificate is verified.

Sounds like fun!

Topic: 1829 Message: 1829

I would like to share with you this very nice letter I received
in reference to our local JOTA efforts...

Dear Charlie,

I want to thank you again for the great QSO on Saturday,
October 15, 2005 during the 2005 Jamboree On The Air. We
had one hundred thirty five Girl Scouts and fifteen Cub Scouts
participating at our station during the day and our QSO with you
was by far the best. The girls thoroughly enjoyed speaking to you.

I've enclosed my QSL card. If you could send me yours,
I'd greatly appreciate it. Thanks again and `73s.

Yours Very Truly,

Keith W. Farley, KG6FCC
Glendale, California

1830. ANSI FIX Procomm+ Windows Xp

Yahoo group: Temple_ARC
Date: 2005-10-25 20:01:38 UTC
From: Charlie Schlieper
Topic: 1830 Message: 1830

PROCOMM+ terminal program is known for it's benefit in using
Extended ASCII and ANSI Codes for computer screen Graphics
in PACKET.

If you're still using any version of this software in Windows
XP platform, you might want to keep this for reference. I
have tested this FIX on several computers with duplicated
results.

For some reason, Windows XP can cause the LOSS of
some ANSI CODES functioning correctly, while using
Procomm+ pgm.

You may think your system is fine, and it may not be, because
all of the CODES don't stop working. Here is an easy way you
can TEST. Send, or have someone else send, an ANSI file
which has some known FLASHING CODES embedded. If your
screen flashes where it is supposed to, then you're probably OK.
However, if it doesn't, then you do! I found that it is caused by
the way you configure the program PROCOMM+ to open up
with a FULL SCREEN window.

Follow the following STEPS to correct the problem:
1. Right Click on your program ICON
2. Left Click on PROPERTIES
3. Left Click on SCREEN
4. Take the Full-Screen OFF by checking on "WINDOW"
5. Click OK at the bottom to exit.

Then follow the following STEPS to open up your program each time:
1. Double Click on your Desktop ICON to open the program.
2. Hit ENTER once.
3. Right Click on C:\ at the upper left corner of your program window.
4. Left Click on PROPERTIES.
5. Left Click on FULL SCREEN
6. Left Click on OK at the bottom.
7. Left Click on OK up above, and leave "apply properties to
current window only" checked

Now, all ANSI CODES will continue to work properly with Windows XP
and PROCOMM+ using Packet Graphics. If your system demonstrates
similar problems, you might give this fix a try.

Enjoy Ham Radio!

> Hello Temple ARC what accommodations can you make a for a member that is on the road that's wants to vote?

a ballot was included in the october newsletter. according to the bylaws, you can mail that in as below. i'll check with the other directors, but i'm guessing that we have the latitude to make an accomodation if you didn't receive a bulletin (or lost it) by accepting a page you print with the ballot from the website bulletin archive (signed of course):

http://www.tarc.org/bulletins/2005_10_Bulletin.pdf (print page 3)

73, john

Balloting Procedure

5.05 Upon completion of the nominations by the Nominations Committee, ballots will be prepared, listing the nominees for each office and with a blank space for write-in candidates. The ballots will be mailed to all members eligible to vote as part of the October newsletter.

5.06 A member eligible to cast a vote in the Election of Officers is one who has been a member of the club for at least 90-days prior to the election, and is in good standing with the club. Each voting member may vote for a maximum of one individual for each office.

5.07 Election of TARC Officials will be held at the regular November club meeting. The Secretary and/or the Membership Chairman shall determine voting eligibility. Voting will be by written ballot, which may be submitted by mail, or the member may bring his ballot to the November meeting. Extra ballots shall be available at the November TARC meeting for voting members needing them. Unless signed by a member's name and/or callsign, a mailed in ballot will be discarded since voting eligibility cannot be established.

1839. TARC scores well in Field Day 2005!

Yahoo group: Temple_ARC
Date: 2005-11-01 04:03:11 UTC
From: John (KE5C)
Topic: 1839 Message: 1839

The Field Day results are out on the ARRL website, and TARC again took second place in North Texas in the 2A class. The folks ahead of us only had 11 more QSO's (1918 vs 1907), so they likely had more bonus points and/or more CW QSO's. If we improve our CW antenna setup next year and knock off a few more bonuses, we could top the charts. Waco came in fifth with less than half our QSO's, so congratulations to all the fine work as we demonstrated TARC's emergency setup and operating capabilities!

I've uploaded the report that will be in the December QST to the website, and you can download it, but be patient since it is a 1.5 MB Adobe pdf file. Check out the picture on the second page of the report as one of our own is caught demonstrating how Field Day is done by the pro's:

http://www.tarc.org/fd.pdf (1.5 MB - be patient)

Below I've queried the scores database for our category and section:

Yahoo group: Temple_ARC
Date: 2005-11-01 05:18:56 UTC
From: James Kennedy
Topic: 1841 Message: 1841

Amateur Radio Emergency Communications Consistency Act of 2005. (HR 3876) has been reintroduced. This legislation could make it easier for radio amateurs living in communities with deed covenants, conditions and restrictions (CC&Rs) to erect suitable antennas. Click here for information on the bill and a sample letter to send to your US Representative asking your Representative to join as a co-sponsor of the legislation. You can find a list of co-sponsors here. The measure would put private land-use regulations, such as homeowners' association rules, on the same legal plane as state or local zoning regulations under the FCC's PRB-1 limited federal preemption regarding antenna structures--?97.15 of the Amateur Service rules. PRB-1 now applies only to states and municipalities. There is no companion legislation in the US Senate at this time

1844. North Texas Section Activity

Yahoo group: Temple_ARC
Date: 2005-11-02 13:36:39 UTC
From: Carolyn Black
Topic: 1844 Message: 1844

From: Leon k5zzm k5zzm@...
RE: Article presented to ARRL about activity during Katrina and Rita.

Bill Swan K5MWC
SEC NTX

Katrina and Rita ? North Texas Section Activity

Katrina and Rita, two names that will long be remembered for the destruction and tragedy that accompanied these unwelcome visitors. But in that destruction and tragedy came affirmation that amateur radio is truly a national asset. An asset that lives up to the phrase: When all else fails, there is amateur radio. In addition to providing much needed emergency communications, another aspect of amateur radio was clearly shown. Amateur Radio operators demonstrated over and over that they are team players, ready to pitch in to do whatever they can to help. Help people that they did not know and people who will perhaps never know them. People helping people, amateur radio was there doing its part to help.

This report is an attempt to capture the NTX Section participation in support of operations in the impacted areas. There are few call signs in this report because if I began to list them I would fail miserably in capturing all who gave of their time, talent and money to help. As the SEC for NTX and a licensed operator for 48 years, I was truly humbled and so proud of amateur radio in general and of those in the NTX in particular. We in NTX suffered little directly from these two storms so our role was to support operations in a manner that provided assistance and support where possible. NTX support began on 29 August and was primarily completed on 10 October. The report that follows was generated from emails, my own notes, after action reports and general observations from the NTX DECs and ECs.

On behalf of the NTX Section,

Bill Swan ? K5MWC

SEC NTX

Summary Report ? NTX Section

Support to Hurricanes Katrina and Rita Operations

Primary Guidelines

? All requests for support to the impacted area are to be coordinated with the STX SEC. South Texas is operating under a Mutual Aid Agreement with the Louisiana and Mississippi Sections. That coordination is to be done through the SEC or his designee.

? All requests for support within NTX counties are to be handled directly by the DECs and ECs operating in those areas.

These guidelines were set up to ensure that requests for support were as well coordinated as possible.

Operation Time Line for major activities: 29 August 2005 to 10 October 2005

Agencies Supported

? American Red Cross

? Salvation Army

? Texas Department of State Health and Human Services (DSHS) Region 2/3

? County EOCs

? Texas Baptist Men

? US Coast Guard

? National Weather Service

? Other relief organizations such as local churches

NTX County/City EOCs Supported

? Collin County

? Lamar County

? Wichita County

? Van Zandt County

? Tarrant County

? City of Arlington

? City of Paris

? City of Plano

? Grayson County

? Denton County

? McLennan County

? Nacogdoches County

? City of Nacogdoches

NTX County/City Shelter Operations Supported

? McLennan County

? Lamar County

? Collin County

? Dallas County

? Nacogdoches County

? Wichita County

? City of Paris

? City of Arlington

? City of Mansfield

? City of Fort Worth

? City of Burleson

? Grayson County

? Parker County

NTX Operational Support

? West Gulf Emergency Net (EMCOM and H&W)

? Daily SM/SEC coordination telecon hosted by WV1X at ARRL HQ

? H&W Net run by the Texas State Guard Amateur Radio Club (TSGARC) and supported by Heart of Texas ARC (HOTARC) and Bosque County ARC, Bell County ARES, Lake Whitney ARC and Navarro Freestone Limestone ARC. Messages were forwarded to this net from the Salvation Army and the American Red Cross.

? Management of the VoIPWX Net which directly supports the NHC during a hurricane approach and landfall

? On scene support to Hancock County MS

? On scene support to Harrison County MS

? On scene support to Jackson County MS

? On scene support to Jasper County TX.

? On scene support to Pearl City and Covington LA

NTX Operation Support Statistics

The following are estimates drawn from the After Action Reports, my notes and telephone conversations, emails, etc. I can not say that they are 100% accurate but they certainly attest to the level of activity.

? Number of NTX Amateurs Involved ? Estimate 250 (100 of which are directly extracted from the DEC reports)

? Volume of H&W Inquiries handled ? Over 60,000 (Yes, I said 60,000 primarily through the great work of the TSGARC and the supporting organizations in that area). Over 17,000 individuals located in response to these inquiries.

? Number of evacuees in supported shelters ? Estimate over 5,000 between Katrina and Rita

? North Texas support ? Well over 25000 man hours (not including On Scene Support man hours)

? On scene support ? Over 2000 man hours

? Technology implemented ? Virtually everything (WinLink, Echolink, HF SSB, IRLP, V/U FM (repeater and direct), satellite, WiFi, packet and Pactor. I am sure that I left something out)

? Number of miles driven ? Impossible to estimate

Type of Service Provided by NTX Amateurs

? Support to Food and Supply distribution

? Support to EOC operations

? Support to Shelter operations

? Support to NWS liaison operations

? Support to message handling of life threatening emergencies (Evacuation of cardiac patient, rescue from roof tops as examples)

? Support to requests across a wide range of needs beyond just communications (To a person deployed on scene, this was the most important comment that we were a part of a team and not just communicators)

? Standby NCS for the relief of the West Gulf Emergency Net when requested

? Standby for assignment as needed (While some who volunteered for on scene assignments were not deployed there were many who were ready, willing and able to go if requested. That is a great tribute to the overall nature of amateur radio operators. A great resource!)

Summary Comments

This summary report admittedly does not do justice to all of the sacrifice, dedication and commitment that the full texts of the After Action Reports provide. I endeavored in this report to summarize the key points and in doing so I know that I left some points out. My intent was to capture in a summary fashion the work of the NTX Section amateur community in support of Katrina and Rita operations.

There are many lessons learned as well which will be the subject of another report. Much went right but of course things also went wrong. Thankfully the

right greatly outweighed the wrong. But improve we must and these lessons learned will be valuable.

As a final note in this report, I would like to share with you a direct quote from Carlton Doe, W3DOE, who helped out in Jasper County. ?This is what I got into the hobby for and have been preparing to do. It was great to be able to help others. On a purely selfish level, I now know what I have in terms of equipment and training works and how much more I can contribute in the future. Thanks again for the opportunity to help.? No, Carlton, you got it wrong, Thanks to you for your work. Carlton?s comment is representative of many that I have received from those who were involved in so many ways. For me there is only one word that begins to express my pride in your work and that word is Thanks. Good Job, well done and K5MWC is clear.

Katrina and Rita, two names that will long be remembered for the destruction and tragedy that accompanied these unwelcome visitors. But in that destruction and tragedy came affirmation that amateur radio is truly a national asset. An asset that lives up to the phrase: When all else fails, there is amateur radio. In addition to providing much needed emergency communications, another aspect of amateur radio was clearly shown. Amateur Radio operators demonstrated over and over that they are team players, ready to pitch in to do whatever they can to help. Help people that they did not know and people who will perhaps never know them. People helping people, amateur radio was there doing its part to help.

This report is an attempt to capture the NTX Section participation in support of operations in the impacted areas. There are few call signs in this report because if I began to list them I would fail miserably in capturing all who gave of their time, talent and money to help. As the SEC for NTX and a licensed operator for 48 years, I was truly humbled and so proud of amateur radio in general and of those in the NTX in particular. We in NTX suffered little directly from these two storms so our role was to support operations in a manner that provided assistance and support where possible. NTX support began on 29 August and was primarily completed on 10 October. The report that follows was generated from emails, my own notes, after action reports and general observations from the NTX DECs and ECs.

On behalf of the NTX Section,

Bill Swan ? K5MWC

SEC NTX

Summary Report ? NTX Section

Support to Hurricanes Katrina and Rita Operations

Primary Guidelines

? All requests for support to the impacted area are to be coordinated with the STX SEC. South Texas is operating under a Mutual Aid Agreement with the Louisiana and Mississippi Sections. That coordination is to be done through the SEC or his designee.

? All requests for support within NTX counties are to be handled directly by the DECs and ECs operating in those areas.

These guidelines were set up to ensure that requests for support were as well coordinated as possible.

Operation Time Line for major activities: 29 August 2005 to 10 October 2005

Agencies Supported

? American Red Cross

? Salvation Army

? Texas Department of State Health and Human Services (DSHS) Region 2/3

? County EOCs

? Texas Baptist Men

? US Coast Guard

? National Weather Service

? Other relief organizations such as local churches

NTX County/City EOCs Supported

? Collin County

? Lamar County

? Wichita County

? Van Zandt County

? Tarrant County

? City of Arlington

? City of Paris

? City of Plano

? Grayson County

? Denton County

? McLennan County

? Nacogdoches County

? City of Nacogdoches

NTX County/City Shelter Operations Supported

? McLennan County

? Lamar County

? Collin County

? Dallas County

? Nacogdoches County

? Wichita County

? City of Paris

? City of Arlington

? City of Mansfield

? City of Fort Worth

? City of Burleson

? Grayson County

? Parker County

NTX Operational Support

? West Gulf Emergency Net (EMCOM and H&W)

? Daily SM/SEC coordination telecon hosted by WV1X at ARRL HQ

? H&W Net run by the Texas State Guard Amateur Radio Club (TSGARC) and supported by Heart of Texas ARC (HOTARC) and Bosque County ARC, Bell County ARES, Lake Whitney ARC and Navarro Freestone Limestone ARC. Messages were forwarded to this net from the Salvation Army and the American Red Cross.

? Management of the VoIPWX Net which directly supports the NHC during a hurricane approach and landfall

? On scene support to Hancock County MS

? On scene support to Harrison County MS

? On scene support to Jackson County MS

? On scene support to Jasper County TX.

? On scene support to Pearl City and Covington LA

NTX Operation Support Statistics

The following are estimates drawn from the After Action Reports, my notes and telephone conversations, emails, etc. I can not say that they are 100% accurate but they certainly attest to the level of activity.

? Number of NTX Amateurs Involved ? Estimate 250 (100 of which are directly extracted from the DEC reports)

? Volume of H&W Inquiries handled ? Over 60,000 (Yes, I said 60,000 primarily through the great work of the TSGARC and the supporting organizations in that area). Over 17,000 individuals located in response to these inquiries.

? Number of evacuees in supported shelters ? Estimate over 5,000 between Katrina and Rita

? North Texas support ? Well over 25000 man hours (not including On Scene Support man hours)

? On scene support ? Over 2000 man hours

? Technology implemented ? Virtually everything (WinLink, Echolink, HF SSB, IRLP, V/U FM (repeater and direct), satellite, WiFi, packet and Pactor. I am sure that I left something out)

? Number of miles driven ? Impossible to estimate

Type of Service Provided by NTX Amateurs

? Support to Food and Supply distribution

? Support to EOC operations

? Support to Shelter operations

? Support to NWS liaison operations

? Support to message handling of life threatening emergencies (Evacuation of cardiac patient, rescue from roof tops as examples)

? Support to requests across a wide range of needs beyond just communications (To a person deployed on scene, this was the most important comment that we were a part of a team and not just communicators)

? Standby NCS for the relief of the West Gulf Emergency Net when requested

? Standby for assignment as needed (While some who volunteered for on scene assignments were not deployed there were many who were ready, willing and able to go if requested. That is a great tribute to the overall nature of amateur radio operators. A great resource!)

Summary Comments

This summary report admittedly does not do justice to all of the sacrifice, dedication and commitment that the full texts of the After Action Reports provide. I endeavored in this report to summarize the key points and in doing so I know that I left some points out. My intent was to capture in a summary fashion the work of the NTX Section amateur community in support of Katrina and Rita operations.

There are many lessons learned as well which will be the subject of another report. Much went right but of course things also went wrong. Thankfully the right greatly outweighed the wrong. But improve we must and these lessons learned will be valuable.

As a final note in this report, I would like to share with you a direct quote from Carlton Doe, W3DOE, who helped out in Jasper County. ?This is what I got into the hobby for and have been preparing to do. It was great to be able to help others. On a purely selfish level, I now know what I have in terms of equipment and training works and how much more I can contribute in the future. Thanks again for the opportunity to help.? No, Carlton, you got it wrong, Thanks to you for your work. Carlton?s comment is representative of many that I have received from those who were involved in so many ways. For me there is only one word that begins to express my pride in your work and that word is Thanks. Good Job, well done and K5MWC is clear.

1847. TARC Awards (Christmas) Dinner

Yahoo group: Temple_ARC
Date: 2005-11-03 01:04:05 UTC
From: K5DOA@aol.com
Topic: 1847 Message: 1847

We will be having our annual dinner on Monday December 5. There will be no club meeting the previous Thursday. . The location will be the same as the last couple of years, the Medallion on South 31st street in Temple. The time will also be the same - 6:30 PM for fellowship with dinner served at 7:00. The cost is still $5.00 each, with the club picking up the remainder of the cost. Our excellent piano player should be back this year also.

It is very important that we get a count of who is coming before everyone gets busy with the Thanksgiving holiday. So if you can make the meeting tomorrow night, bring your checkbook and sign up with Jerry our treasurer. Otherwise watch for a special mailing we will be sending next week and respond to it promptly so we can get a count.

73 - Darwin K5DOA

PS - we are aware that this is scheduled night of the Temple Christmas parade. The Medallion was not available on any other night. We have been in contact with the city parade officials and they will be able to cover for our usual volunteers.

Subject: [Temple_ARC] TARC Awards (Christmas) Dinner

We will be having our annual dinner on Monday December 5. There will be no club meeting the previous Thursday. . The location will be the same as the last couple of years, the Medallion on South 31st street in Temple. The time will also be the same - 6:30 PM for fellowship with dinner served at 7:00. The cost is still $5.00 each, with the club picking up the remainder of the cost. Our excellent piano player should be back this year also.

It is very important that we get a count of who is coming before everyone gets busy with the Thanksgiving holiday. So if you can make the meeting tomorrow night, bring your checkbook and sign up with Jerry our treasurer. Otherwise watch for a special mailing we will be sending next week and respond to it promptly so we can get a count.

73 - Darwin K5DOA

PS - we are aware that this is scheduled night of the Temple Christmas parade. The Medallion was not available on any other night. We have been in contact with the city parade officials and they will be able to cover for our usual volunteers.

NOTE: REPLY goes to the entire list.

Hi Darwin:
For those unable to attend tonights meeting, what is the procedure for
reserving and paying?
Jim, n5djj

Good question Jim - We plan to make a mailing next week of a one page
announcement of the party. It will have place to specify the number of
reservations. You can return it to the address listed on the invitation along with a
check. - Darwin K5DOA

1863. High School Seniors and College Amateurs

Yahoo group: Temple_ARC
Date: 2005-11-05 16:21:07 UTC
From: John (KE5C)
Topic: 1863 Message: 1863

Please forward this email to any licensed high school senior or college aged amateur radio operator you know. Thanks!

-----Original Message-----

THE FOUNDATION FOR AMATEUR RADIO, INC., a non-profit organization with headquarters in Washington, D.C., plans to administer fifty-four (54) scholarships for the academic year 2006 - 2007 to assist licensed Radio Amateurs. The Foundation, composed of over seventy-five local area Amateur Radio Clubs, fully funds three of these scholarships. Ten are funded with the income from grants. The remaining forty-one (41) are administered by the Foundation without cost to the various donors.

Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Clubs, especially those in Delaware, Florida, Maryland, Ohio, Pennsylvania, Texas, Virginia and Wisconsin, are encouraged to announce these opportunities at their meetings, in their club newsletters, during training classes, on their nets and on their world wide web home pages.

Additional information and an application form may be requested by letter or QSL card postmarked prior to April 30, 2006. Please send name, call and address to:
Diane Zimmerman, AA3OF
Chairman Scholarship Committee
FAR Scholarships
Post Office Box 831
Riverdale, MD 20738

The Foundation for Amateur Radio, incorporated in the District of Columbia, is an exempt organization under Section 501(C)(3) of the Internal Revenue Code of 1954. It is devoted exclusively to promoting the interests of Amateur Radio and those scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service.

The Foundation encourages all qualified amateurs to apply for these awards.

The following awards will be available for the upcoming academic year:

1. There are three (3) Silent Key Memorial Scholarships, which pay $2500 each, available to U.S. Residents, pursuing any course of study leading to a Bachelor's degree. Preference will be given to residents of the District of Columbia, Maryland and Northern Virginia.
2. The Richard G. Chichester Memorial Scholarship pays $1000. Applicants must be members of the ARRL and recommended by an ARRL-affiliated club (they

need not be a member of the club). There is no restriction on the course of study. Applicant must be pursuing a Bachelor's degree. Preference will be given to Texas residents living in the metropolitan areas of Austin, Kerrville or San Antonio. Minimum license requirement - General Class.
3. There are three (3) Radio Club of America Scholarships, which pay $1,000 each. Applicants must intend to pursue studies in electronic engineering or electronic technology toward an Associate or Bachelor's degree and be U.S. citizens. Preference will be given to applicants taking courses in Wireless Communications. Minimum license requirement - General Class.
4. There are sixteen (16) Quarter Century Wireless Association Scholarships, three of which pay $1500 and thirteen of which pay $1000. There are no restrictions on the course of study and applicants must intend to seek an Associate, Bachelor's or Graduate degree. There is no residence area preference. Applicants must be recommended by a member of QCWA, but may not themselves be members of QCWA.
5. There are two (2) Young Ladies' Radio League Memorial Scholarships that pay $1500 each. Applicants must hold at least an FCC Technician Class or equivalent foreign authorization and intend to seek a Bachelor's or Graduate degree from a U.S. college or university. There are no residence or course restrictions. Preference will be given to female applicants.
6. The Ralph V. "Andy" Anderson-KONL Scholarship pays $1000. There is no restriction on the course of study, but preference will be given to applicants pursuing a degree in Journalism. Applicants must be residents of the U.S. or its territories. Applicants must be seeking a Bachelor's degree. Minimum license requirement - General Class.
7. The Columbia Amateur Radio Association, Inc., Scholarship pays $1000. It is available to Maryland residents pursuing a Bachelor's degree in any course of study.
8. There are five (5) Baltimore Amateur Radio Club Scholarships, 4 pay $1000 and 1 pays $1,500. Applicants must be Maryland residents. For three of the 4 - $1000 awards, preference will be given to those who have successfully completed one year of college or have been previous winners of this award. The fourth award, which is reserved for an entering first year student, will be renewable for three years if the student remains in good academic standing throughout the period. The fifth award, paying $1,500, has been designated as the Ernie Dobos Memorial Scholarship with preference given to a Baltimore City resident. Applicants must be pursuing a Bachelor's degree.
9. The Tropical Hamboree Scholarship sponsored by the Dade Radio Club of Miami, Florida pays $1000. Applicants must be Florida residents pursuing a Bachelor's degree. There is no restriction on the course of study; however, preference will be given to those studying electronics or science-related fields.
10. The Rose Ellen Bills Memorial Scholarship pays $2000. There is no restriction on the course of study. Applicants must be a resident of the U.S. or its territories pursuing a Bachelor's degree. Minimum license requirement - General Class
11. The Frederick Amateur Radio Club Scholarship pays $1000. There is no restriction on the course of study. Applicants must reside within 150 miles of Frederick, Maryland; preference will be given to qualified applicants from Frederick County, Maryland. Applicant must be pursuing a Bachelor's degree.

12. The five (5) 10-10 International Net, Inc., Scholarships pay $1000 each. Applicants must be licensed Radio Amateurs having HF privileges. There is no restriction on the course of study. Applicants must seek an Associate, Bachelor's or Graduate degree. Non-US amateurs are also eligible. Applicants must be a 10-10 member or provide a recommendation from a member of the 10-10 International Net.
13. The WARAC Memorial Scholarship, sponsored by the West Allis Radio Amateur Radio Club, Inc. Milwaukee, Wisconsin, pays $1500. Applicants must be Wisconsin residents pursuing an Associate, Bachelor's or Graduate degree in any course of study.
14. The Kevin Barry Perdue Memorial Scholarship, sponsored by Kay Craigie-N3KN and Carter Craigie-N3AO, pays $2000. Applicants must pursue a Bachelor's degree with a course of study in the liberal arts, humanities, or social sciences from a U.S. college or university.
15. The South Milwaukee Amateur Radio Club Scholarship pays $1000. Applicants must be Wisconsin residents and intend to seek an Associate or Bachelor's degree from a college or university in the U.S. Preference will be given to applicants studying Electrical Engineering or related technology.
16. The Nanticoke Amateur Radio Club Scholarship pays $1000. Applicants must hold a license with HF privileges. Preference will be given to those studying Architecture, Engineering, Electronics, Science or a related field at an institution of higher learning in the U.S. Applicants must pursue a Bachelor's degree. Residence requirement - Delaware, Maryland, District of Columbia, or Virginia.
17. The Murgas Amateur Radio Club Scholarship pays $500. Applicants must be residents of the Commonwealth of Pennsylvania, and seek a Bachelor's degree from a U.S. college or university. There is no restriction on the course of study.
18. The Lawrence E. and Thelma J. Norrie Memorial Scholarship, pays $2500. Applicant must be a U.S. resident. Preference will be given to Juniors, Seniors and Graduate students with an academic Grade Point Average of 3.0 or higher who are pursuing a Bachelor's or higher degree in science or engineering. Minimum license requirement: Any Class with HF privileges.
19. The Ernest L. Walker, WB3DVL, Memorial Scholarship sponsored by the Baltimore Radio Amateur Television Society Memorial Scholarship pays $1000. There is no restriction on the course of study. Applicants must pursue a Bachelor's degree. Applicants must reside within 150 miles of Baltimore, Maryland. Preference will be given to Maryland residents.
20. The Robert E. True Memorial Scholarship pays $1000. Applicants must be residents of the state of Ohio seeking a Bachelor's degree at a US college or university. Preference will be given to those pursuing courses in Electrical Engineering or Electronic/Computer Technology.
21. The Free State Amateur Radio Club Scholarship pays $500. Applicants must be U.S. citizens residing in the State of Maryland and holding a valid FCC Amateur license with HF privileges. There is no restriction on the course of study. Applicants must seek an Associate, Bachelor's or Graduate degree from a college or university in the United States.
22. OZAUKEE Radio Club Scholarship pays $1000. It is available to Wisconsin residents pursing a Bachelor's or Graduate degree in any course of study.
23. The Claude H. Haring, Jr., W3IIM Memorial Scholarship sponsored by the Phil-Mont Mobile Radio Club, Inc. pays $2000. There is no restriction on the

course of study. Applicants must intend to seek a Bachelor's or Graduate degree, and reside in the Eastern Pennsylvania or Southern New Jersey ARRL Sections.
24. The Dwight Weller, KB3LA, Memorial Scholarship, sponsored by Phillip Karn, KA9Q, pays $1000. Applicants must intend to seek a Bachelor's degree in any branch of the engineering or physical sciences. There is no residence requirement.
25. The Chuck Reville, K3FT Memorial Scholarship, sponsored by Phillip Karn, KA9Q, pays $1000. Applicants must intend to seek a Bachelor's degree in any branch of the engineering or physical sciences. There is no residence requirement.
26. The Joann Hoch, N3FTC, Memorial Scholarship, sponsored by the Phil-Mont Mobile Radio Club, Inc. pays $2000. There is no restriction on the course of study. Applicants must intend to seek a Bachelor's or Graduate degree, and reside in the Eastern Pennsylvania or Southern New Jersey ARRL Sections.

1864. ARRL November Sweepstakes today and in two weeks

http://www.arrl.org/contests/rules/2005/novss.html

today, cw, 3 pm to sunday 9 pm, operate no more than 24 of the 30 possible hours.

4. Exchange: The required exchange consists of:
4.1. A consecutive serial number;
4.2. Precedence;
4.2.1. "Q" for Single Op QRP (5 Watts output or less);
4.2.2. "A" for Single Op Low Power (up to 150 W output);
4.2.3. "B" for Single Op High Power (greater than 150 W output);
4.2.4. "U" for Single Op Unlimited;
4.2.5. "M" for Multi-Op;
4.2.6. "S" for School Club;
4.3. Your Callsign;
4.4. Check (the last two digits of the year you were first licensed);
4.5. ARRL/RAC Section (North Texas here)

so for my 33rd contact, and i am running low power, i send: "33 A KE5C 77 NTX"

phone weekend is in two weeks. cul, john

keith@...

Subject: Do you recognize this girl?

This little girl is at the Phuket Hospital in Thailand.

She does not remember her own name or anything! She has lost her parents.

She must be of Western origin. She was a victim when she got caught in the Tsunami (tidal wave) disaster in Phuket, Thailand and nobody knows who she is, so we are hoping if we distribute this email around the world someone will know her.

Please don't break the chain, your contribution could be the one that solves this little girls problem. Please forward this to all your contacts.

Someone might realize who she is. Thank you for taking the time to look...

It is a long-shot that someone will know this young lady, but if we send it to many, many people, perhaps someone's forwarded message will find relative or someone who knows her.
DO YOU RECOGNIZE THIS GIRL?

Subject: Do you recognize this girl?

This little girl is at the Phuket Hospital in Thailand.
She does not remember her own name or anything! She has lost her parents.
She must be of Western origin. She was a victim when she got caught in the Tsunami (tidal wave) disaster in Phuket, Thailand and nobody knows who she is, so we are hoping if we distribute this email around the world someone will know her.
Please don't break the chain, your contribution could be the one that solves this little girls problem. Please forward this to all your contacts.
Someone might realize who she is. Thank you for taking the time to look...

She was identified.

In fact she was reunited with her relatives within
3 or 4 days after the tsunami.

Sent: Monday, November 07, 2005 10:31 AM

Subject: 2006 St. Patrick's Day Hamfest!

Thank you for your past registration for the Midland St. Patrick's

Day Hamfest. We wanted you to be the first to be updated on what's

happening with the 2006 St. Patrick's Day Hamfest.

In 2006 the hamfest is moving to a new location and new weekend. The

2006 hamfest will be in the Midland Downtown Lions Club building on

March 4 & 5, 2006.

For 2006 we are offering an Early Bird Special on our popular

"Package Deal". The package deal is one pre-registration ticket and

20 extra chance tickets. The "Package Deal" is normally $20.00 but

until December 15, 2005, you can get it for only $18.00! That's $10.

00 less than if you purchased those tickets separately!

All the details about the hamfest and the Early Bird Special are at

http://hamfest.w5qgg.org <http://hamfest.w5qgg.org/> . You can purchase the
Early Bird Special

online or download the registration form and mail it in. Table

rentals are also available now with a new, lower price for 2006....

only $10.00 per table.

We will be mailing out our traditional flyer near the end of January.

Below is the address we will be mailing your flyer to. Please check

and let us know if there are any corrections that need to be made by

simply replying to this email with your corrections. You can also

let us know of any corrections by clicking the "Request Flyer" menu

selection on the hamfest home page.

We hope you'll make plans now to attend. Please forward this email

to your friends and club members so they may make plans to attend and

take advantage of the Early Bird Special!

73,

Midland Amateur Radio Club

St. Patrick's Day Hamfest Committee - 2006

1872. PSK 31 Revisited

Yahoo group: Temple_ARC
Date: 2005-11-08 17:50:00 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 1872 Message: 1872

PSK 31 is a keyboard to keyboard communications system that uses very narrow band width and very low power signals to communicate with other ham radio stations. There is a lot of activity on 14.07015 and 7.0715 in the 20 and 40 meter bands. Listen in Upper Side Band for a sound much like a cat purring.

Last week I revived Digital Operations at the farm in Gatesville. This started with loading software onto my laptop computer and getting the computer hooked to the radio.

One multi use software package is Mix W available for download from http://www.mixw.net/ or for a phenominal fee Charlie n5td@... will make a CD Copy.

This is a shareware program that can be registered for something like $50. It has been several years since I registered mine.

Anyhow, this software will provide several different modes of communications including Packet and RTTY as well and PSK31.

Next you will need a sound card in your computer. The sound card takes audio from the speaker of your rig and serves as a decoder to present the recovered information to your screen. This can be as simple as a patch cable between the speaker of your rig and the sound card. Usually it is good to tie left and right in the stereo input of your sound card together so that the mono audio from your rig will be applied to both the left and right inputs. Also a 50 to 100 K Ohm resistor in series with the mono audio may be needed to drop the loudness down to a usable level.

(Please note - This is an over simplified approach. Other problems like hum and ground loops may occur, and a more sophisticated interface between your radio and the computer may be needed - but this is a bare bones way to get started).

The Dell laptop has a built in sound card and recepticles on the side of the computer for a microphone, earphones and line level audio output. The Dell also has a DB9 connection for data communications.

At this point you should be able to go to 14.07015 or 7.07015 and start seeing a water fall display indicating the presence of radio traffic. You will need to do some preliminary setup in the Mix W software like selecting the mode of operation, and entering your call sign, etc., but this should get you started monitoring PSK.

Most radios have some kind of recepticle for microphone and headset and press to talk. These will be needed to start sending. More will follow in a future post. If you run into trouble post your inquiries to Temple_ARC@...m (underscore character between Temple and ARC) and one of our resident sound card experts will help you out.

Best 73,

Steve

Subject: Fw: who gets the credit

... KEEP THIS GOING PLEASE

I watched the flag pass by one day,
It fluttered in the breeze.

A young Marine saluted it,
And then he stood at ease..

I looked at him in uniform
So young, so tall, so proud,
With hair cut square and eyes alert
He'd stand out in any crowd.

I thought how many men like him
Had fallen through the years.
How many died on foreign soil
How many mothers' tears?

How many pilots' planes shot down?
How many died at sea
How many foxholes were soldiers' graves?
No, freedom isn't free.

I heard the sound of Taps one night,
When everything was still,
I listened to the bugler play
And felt a sudden chill.
I wondered just how many times
That Taps had meant "Amen,"

When a flag had draped a coffin.
Of a brother or a friend.

I thought of all the children,
Of the mothers and the wives,
Of fathers, sons and husbands
With interrupted lives.

I thought about a graveyard
At the bottom of the sea

Of unmarked graves in Arlington.
No, freedom isn't free.

Wondering if there is going to be a VE test session or not.

Has it been posted or announced anywhere else beside the TARC
Reflector??

FCC 97.509a

Has Public notice been given? Not just here on the Reflector??
Hand posted flyer, club newsletters?

Date and Time?

Will other test be offered beside General?

Will walk-ins be accepted?

Test site location?

The VE or there Liasion contact info??

Are they using ARRL or W5YI format??

and so forth....

Might be interested myself in taking my final test for Extra. And
know a couple people that might want to take their General and/or
Extra also.

Hello all !
In response to the following:
Bosque County ARC is holding a VE Testing Session at 5:30 p.m. at the Clifton VFD, Saturday, November 12, 2005. The test session is through W5YI for all class licenses. Walk-ins are welcomed! Everything about the BCARC and the test sessions are posted at our website at www.w5bcr.org and the BCARC Contact VE is Ted Richards / AB5QU and can be reached at (254) 622-8693 for additional information.
In addition, the BCARC meeting is also tonight at 7:00 p.m. Everyone is welcomed!
Respectfully,
Rene' Miller / KD5NEV
BCARC President

1887. Re: [Temple_ARC] ARRL Walter Cronkite mpg on BPL

Yahoo group: Temple_ARC
Date: 2005-11-15 19:27:48 UTC
From: Michael Hopwood
Topic: 1886 Message: 1887

The file is 95MB not 10. Not to savy for dial-up users.

Operating Time (hrs): 3.0

Summary:
Band QSOs

160: 0
80: 0
40: 24
20: 32
15: 44
10: 0

Total: 100 Sections = 48 Total Score = 9,600

Club: Central Texas DX and Contest Club

Comments:

My wife drove the 150 miles back from Dallas to Temple after my business meeting ended today so I could operate some. Mobile is a lot of fun (compared to mobile without operating), but you are always in a high QRN/QRM environment. I set up on the spur of the moment, but did use TR-Log on a laptop rather than try to write things down by hand. A headset and a footswitch would have really helped. K5TR was the only Central Texas contester I came across. Thanks for the QSO's!

1911. Fw: ARRL 160 N5TW(KE5C) Single Op HP

Yahoo group: Temple_ARC
Date: 2005-12-05 00:24:42 UTC
From: John (KE5C)
Topic: 1911 Message: 1911

ARRL 160-Meter Contest

Call: N5TW
Operator(s): KE5C
Station: N5TW

Class: Single Op HP
QTH: STX
Operating Time (hrs): 29

Summary:
Total: QSOs = 1032 Sections = 76 Countries = 6 Total Score = 175,152

Club: Central Texas DX and Contest Club

Comments:

Thanks to N5TW for letting me enjoy this event at his contest station. This station is capable of much more than I am able to extract from it. The 87A fan quit early during the 0900 hour of the first day causing the amp to go off-line. A special thanks goes to K5AB who loaned an Al-1200 and to K5TR who simultaneously drove over an hour to bring a Ten-Tec Centurion for day two. Congratulations to those who voluntarily choose low power and QRP! Many CTDXCC members participated and were worked including AA5BT, AB5K, AC5AA, AD0K, K5AB, K5NA, K5WA, KI5DR, KS5V, KV5V, N2LA, N3BB, N5AW, N5XJ, NZ5A, W5AHC, W5SL, W5TA, W5VX, W5ZL, and W9BF.

The atmospheric QRN built steadily starting early the second night and was 20 over on the vertical and S7-9 on the beverages. Thank you to all who spent minutes completing QSO's the second night through this noise, and I'm sorry VO1MP, but I just couldn't hear the M although a few folks tried to relay that to me. The operator generated QRN and QRM reported by others were challenging at times.

STATION:

Antennas: The transmit antenna is a 4-square made from inverted-L's with 55 foot verticals suspended from the 40 meter tower. A relay box with a matching network optionally drives each vertical in phase for an omni pattern for contests. The antenna has 5 miles of ground radials covering nearly 3 acres. The receive antennas are four 700 foot long 2-way beverages. The beverage controller allows ganging the NW beverage with any other selection. This is done to splay the pattern across North America during contests and to listen NE and SW simultaneously in the mornings.

Rig: Ten-Tec Orion

Amp: 87A (until 0900 day one), AL-1200 (day two)

1916. equiptment trade

Yahoo group: Temple_ARC
Date: 2005-12-10 14:03:05 UTC
From: Glenn Blum
Topic: 1916 Message: 1916

Good morining,
I would like to see if anyone would be interested in a trade.
I have a excellent condition TenTec OMNI-C HF rig with matching powersupply
with all origional paper work.
I am looking at stepping up my VHF packet operation and I would like a good
TNC and vhf radio. Basically a complete packet operation. This will allow me
to use my other radio/soundcard operation for other digital modes.
Thanks,
Glenn Blum

1918. NOTICE OF PROPOSED RULE MAKING AND ORDER

Yahoo group: Temple_ARC
Date: 2005-12-13 14:23:53 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 1918 Message: 1918

NOTICE OF PROPOSED RULE MAKING AND ORDER
Adopted: July 15, 2005 Released: July 19, 2005
Comment Date: 60 days after publication in the Federal Register
Reply Comment Date: 75 days after publication in the Federal Register
By the Commission: Notice of Proposed Rule making

1000. A: No radio system owner, or radio system operator, or person or persons acting on the direction, or suggestion, or supervision, of any radio system owner, or radio system operator, may try, attempt to try, or make or make any attempt to try, to comprehend or understand, any or all, in whole or in part, of the herein mentioned Federal Communication Commission Regulations, except as authorized by the Administrator or an agent appointed by, or under the supervision of, the Administrator.

1000. B: If any radio system owner, or radio system operator, or group of associated radio system owners or radio system operators, becomes aware of, or realizes, or detects, or discovers, or finds, that he, or she, or they, are, or have been beginning to, or are about to understand the Federal Communication Commission Rules or Regulations or any of its provisions, (he) (she) (they) must immediately, within three (3) days of such discovery or awareness, notify, in writing, the Administrator.

1000. C: Upon receipt of any such above notice of impending comprehension, the Administrator shall promptly cause said Federal Communication Commission Rules and/or Regulations to be rewritten in such a form and manner as to completely and totally eliminate any further possibility of comprehension by any radio system owner, or radio system operator, or person or persons acting on the direction, or suggestion, or supervision, of any radio system owner or radio system operator.

1000. D: The Administrator may, at his or her option, require any radio system owner, or radio system operator, or person or persons acting on the direction, or suggestion, or supervision, of any radio system owner, or radio system operator, who commit(s), or attempt(s) to commit, or exhibit(s) any propensity to commit, the offense of understanding or comprehending the Federal Communication Commission Rules and/or Regulations, or any part thereof, to attend courses of remedial instruction in said Rules and/or Regulations, until such time as said radio system owner, or radio system operator, or person or persons acting on the direction, or suggestion, or supervision, of radio system owner, or radio system operator, demonstrate that they are no longer capable of exhibiting any comprehension or understanding of anything.

Comment period: Persons wishing to comment upon said NPRM have until April 1, 2006 to send in comments regarding the above NPRM to the aforementioned agency, in triple quadruplicate, typed, certified, registered, no carbons,

initialed and notarized with a photo identification authorized by the Homeland Security Agency, including original radio system license or licenses, medical certificate, three letters of recommendation from employer, police chief and FBI signifying no felony or misdemeanor convictions, poor work habits or personal disgusting habits which would offend the Administrator, including but not limited to: smoking, drinking, profanity, watching R rated movies, owning cable TV, non-church attendance, voting independent, listening to rap music, joining trade associations, speaking to attorneys, or talking snippy to anyone in Gettysburg.

1930. Sloper

Yahoo group: Temple_ARC
Date: 2005-12-22 01:07:37 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 1930 Message: 1930

This morning AA5RT and I built a single K3LR sloper antenna on the Gatesville tower. This sloper is a 1/2 wavelength 160M antenna with the top tied to the tower at 180 ft, and the bottom tied to the tower at 10 feet. A rope pulls this antenna away from the tower and the feed point is about 90 ft above ground and 100 feet out from the tower. I am hoping for more vertical polarization and a better signal into Northern Europe. This dipole is fed with 450 Ohm Window Line for multiband operation. Reports at 5:30PM Local were vy good into Peoria, IL.

I took a bunch of random and unedited pictures while I was on the tower. Pictures at http://www.bosshardradio.com/Gatesville/tower2

Thus far

Merry Christmas,

Steve NU5D

Wow Steve that is some antenna. Thanks for sharing and and the pix from the top are neat also. I'll drop by one of these days and admire the setup in person.

Merry Christmas to all and 73 - Darwin K5DOA

End of year Area SIMPLEX Relay Net

Wednesday, December 28, 2005

To all Area HAMS

As many of us know from experience, most disasters happen at times when all of us are having a good time and attending to personal matters.
With this in mind, the W5TSG emergency relay net would like everyone to make a last shot at making simplex contacts a reality once again.

There are HAMS all over our area that need to unite during a disaster so we are asking all of you to make this happen at the end of 2005. We are asking you to just check in as follows:

1-The simplex frequency will be 147.55
2-Check in no matter where you are
a-If you are not acknowledged, check in on the following:
1-147.240 97.24 +
2-147.180 123 +
3-your local repeater
b-Advise the net controller you were unable to get a relay
3-Everyone listen for all persons trying to check in
4-Relay for that person
5-Give your call sign and location plus any relays
6-It won?t be necessary for comments just the contact
7-We will take check-ins as long as we can
8-We intend to start at 1930 hours (7:30 P.M.)
9-When the net is concluded we will meet on 147.320 123 + at about 2000 hours (8:00pm) or when we are finished. We will then tally:
a-Number of check-ins
b-Locations
c-Number of actual relays
d-The number who were unable to make simplex contacts

Please help make this a success. Success means we are ALL successful in furthering our expertise when disasters happen no matter where it is.

73s
Merry Christmas
Leon

From: John (KE5C)
Topic: 1935 Message: 1935

Two from the Chicken Fat Operators:

'Twas the night before Christmas and all through the shack
The rig was turned off and the mike cord lay slack.
The antenna rotor had made its last turn,
The tubes in the linear have long ceased to burn.
I sat there relaxing and took off my specs,
Preparing to daydream of armchair DX,
When suddenly outside I heard such a sound,
I dashed out the door to see what was around.
The moon shone down brightly and lighted the night-
For sure, propagation for the low bands was right.
I peered towards the roof where I heard all the racket,
And there was some guy in a red, fur-trimmed jacket.
I stood there perplexed in a manner quite giddy.
Just who was this stranger - di di dah dah di di?
He looked very much like an FCC guy,
Who'd come to check up on some bad TVI.
I shouted to him, "OM, QRZ"
"Hey, you by the chimney, all dressed up in red."
I suddenly knew when I heard sleighbells jingle.
The guy on the rooftop was jolly Kris Kringle.
He had a big sack full of amateur gear,
Which made a big load for a prancing reindeer.
Transmitters, receivers, for cabinets and racks,
Some meters and scopes and a lot of co-ax.
He said not a word 'cause he'd finished his work
He picked up his sack, then he turned with a jerk.
As he leaped to his sleigh, he shouted with glee,
And I knew in a moment he'd be QRT.
But I heard him transmit as he flew o'er the trees
"Happy Christmas to all, and to all seventy-three's."

'Twas the night before Christmas,
And all through two-meters,
Not a signal was keying up,
Any repeaters.

The antennas reached up,
From the tower, quite high,
To catch the weak signals,
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day,

They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters,
For that rare ZK3.

When the meter was pegged,
By a signal with power,
It smoked a small diode,
And, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster,
Logged a spot of the signal,
On the DX PacketCluster,

While I ran to the window,
And peered up at the sky,
To see what could generate,
RF that high.

It was way in the distance,
But the moon made it gleam,
A flying sleigh,
With an eight element beam,

And a little old driver,
Who looked slightly mean.,
So I though for a moment,
That it might be Wayne Green.

But no, it was Santa,
The Santa of Hams,
On a mission, this Christmas,
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax,
Right into the shack.

While Mom and I hid,
Behind stacks of CQ,
This Santa of hamming,
Knew just what to do.

He cleared off the shack desk,
Of paper and parts,
And filled out all my late,
QSLs for a start.

He ran copper braid,
Took a steel rod and pounded,
It into the earth,
Till the station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes,
In my linear amp,
(Never worked right before,
Now it works like a champ).

A new, low-pass filter,
Cleaned up the TV,
He corrected the settings,
In my TNC.

He repaired the computer,
That would not compute,
And he backed up the hard drive,
And got it to boot.

Then, he reached really deep,
In the bag that he brought,
And he pulled out a big box.,
"A new rig?" I thought!

"A new Kenwood? An Icom?
A Yaesu, for me?
(If he thought I'd been bad,
It might be QRP!)

Yes! The Ultimate station!
How could I deserve this?
Could it be all those hours,
That I worked Public Service?

He hooked it all up,
And in record time, quickly,
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent.,
But the cards and the postage,
Will cost two month's rent!

He made final adjustments,
And left a card by the key,
"To Gary, from Santa Claus,
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile up was big,
But a card from St. Nick,
Would be worth my new rig.

Oh, too late, for his final,
Came over the air,
It was copied all over,
It was heard everywhere.

The Ham's Santa exclaimed,
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

'Twas the night before Christmas and all through the shack
The rig was turned off and the mike cord lay slack.
The antenna rotor had made its last turn,
The tubes in the linear have long ceased to burn.
I sat there relaxing and took off my specs,
Preparing to daydream of armchair DX,
When suddenly outside I heard such a sound,
I dashed out the door to see what was around.

1937. Ham Antenna

Yahoo group: Temple_ARC
Date: 2005-12-23 16:06:16 UTC
From: Steve Bosshard (NU5D)
Topic: 1937 Message: 1937
Attachments: 2 described; binary payloads are missing from this source WARC

I just picked up my January QST, and one of the first classified adds was for a 2M antenna, manufactured by a ham right in our own back yard. The proud maker of the WC6, 6M AM mobile, now has a line of antennas.

Visit www.w5ncd.com <http://www.w5ncd.com/> for more details.

Steve

NU5D

PS - had a nice 20M visit with N5AX, Hill in Barstow, CA and formerly of Waco - still has a mother living in Waco - First interest in ham radio for Hill was listening to WACO AM from atop the ALICO Building - A crystal, headphone, and meager antenna is all needed when you live 5 blocks from the transmitter. Hill also worked for WFAA and KCEN TV in 1956.

1942. Working the ISS CrossBand Rptr

Yahoo group: Temple_ARC
Date: 2005-12-27 18:03:57 UTC
From: Charlie Schlieper
Topic: 1485 Message: 1942

The ISS CrossBand FM Repeater has been turned back on
and is working again. The basic UPLINK is 437.800 MHz and the
DOWNLINK is 145.800 MHz, FM mode. Watch your modulation
with this system, as it seems to be very intolerant of over-modulation,
and simply cuts OFF when someone hits it too HOT!

I programmed FIVE CHANNELS to work SPLIT, with Doppler correction:
Downlink / Uplink
Chnl 1 145.803 MHz 437.791 MHz
Chnl 2 145.8015 MHz 437.7965 MHz
Chnl 3 145.800 MHz 437.800 MHz <--- Center
Chnl 4 145.7985 MHz 437.8045 MHz
Chnl 5 145.797 MHz 437.809 MHz

Enjoy Ham Radio!

with this system, as it seems to be very intolerant of over-modulation,
and simply cuts OFF when someone hits it too HOT!

I programmed FIVE CHANNELS to work SPLIT, with Doppler correction:
Downlink / Uplink
Chnl 1 145.803 MHz 437.791 MHz
Chnl 2 145.8015 MHz 437.7955 MHz
Chnl 3 145.800 MHz 437.800 MHz <--- Center
Chnl 4 145.7985 MHz 437.8045 MHz
Chnl 5 145.797 MHz 437.809 MHz

Enjoy Ham Radio!

End of year Area SIMPLEX Relay Net

Wednesday, December 28, 2005

To all Area HAMS

As many of us know from experience, most disasters happen at times when all of us are having a good time and attending to personal matters.
With this in mind, the W5TSG emergency relay net would like everyone to make a last shot at making simplex contacts a reality once again.

There are HAMS all over our area that need to unite during a disaster so we are asking all of you to make this happen at the end of 2005. We are asking you to just check in as follows:

1-The simplex frequency will be 147.55
2-Check in no matter where you are
a-If you are not acknowledged, check in on the following:
1-147.240 97.24 +
2-147.180 123 +
3-your local repeater
b-Advise the net controller you were unable to get a relay
3-Everyone listen for all persons trying to check in
4-Relay for that person
5-Give your call sign and location plus any relays
6-It won?t be necessary for comments just the contact
7-We will take check-ins as long as we can
8-We intend to start at 1930 hours (7:30 P.M.)
9-When the net is concluded we will meet on 147.320 123 + at about 2000 hours (8:00pm) or when we are finished. We will then tally:
a-Number of check-ins
b-Locations
c-Number of actual relays
d-The number who were unable to make simplex contacts

Please help make this a success. Success means we are ALL successful in furthering our expertise when disasters happen no matter where it is.

1946. HF Priviledges for Entry Level

Yahoo group: Temple_ARC
Date: 2005-12-30 00:18:41 UTC
From: Charlie Schlieper
Topic: 1946 Message: 1946

An interesting article describing what Jim Haynie, W5JBP, President of ARRL, entitled "ARRL Pres says to bring back the Novice Class," is in the latest January, 2006, issue of WORLD RADIO magazine.

Mentioned in the article was what we have today is a "TWO METER GHETTO." The idea of changing the ENTRY LEVEL class seems to make good sense.

(Similar views on the subject are also found in QST magazine.)

The ARRL President says he has full support of the ARRL board in this matter. It continued to read that-- this type of change would give back "a taste of what Amateur Radio is really all about" to new entry level hams.

I think this article is a good one, and pretty much sums it up! I agree whole heartedly with their concept, but what the FCC does is anybodys guess? It's a wait-n-see, hope they decide soon, item-- for us all.

Amateur Radio's license restructuring plans for 2006.

I want to make a few points crystal clear:

1. I am not opposed to manual Morse code operation. But Morse code is just another mode and should not be afforded any special priority over others. It is available to those who wish to use it. Morse proficiency should not be required for those who do not wish to use the mode.

2. Manual radiotelegraphy communications has been superceded by more modern, reliable, accurate, faster and efficient means of communication.

3. Requiring manual telegraphy proficiency is not compatible with the radio amateur's mandated objective of contributing to the advancement of the radio art.

4. No evidence exists that Morse proficiency is an indicator of a desirable,motivated or better qualified operator.Just give a listen at 3.975 or 3.898 Extra & General class operators are given notice by the fcc more than any other class operators.

5. The Morse code requirement serves as an advancement barrier to many otherwise qualified individuals.

6. The value of Morse code communications in the Amateur Service is primarily recreational in nature and manual telegraphy proficiency should no longer be a compulsory licensing requirement for any class of Amateur Radio license.

7. The most challenging problem is our attitude towards newcomers and our focus on the mode of CW as the defining characteristic of Amateur Radio. If you do not operate the mode CW or if you are not proficient with the CW mode, then you are not a real ham radio operator.This is our most challenging problem our attitude towards change.If we can overcome this hurdle, promoting Amateur Radio for the future is the easy part. (ARRL Past President, Rod Stafford, W6ROD, wrote of similar issues - I encourage you to read it.)

8. I do not have good ideas on how to change the mode attitudes. I wish I did because I believe the mode attitude is the Achilles Heel of the Amateur Radio Hobby.Changing our attitude towards change and new comers is a key part of growing Amateur radio in the future.

HAPPY NEW YEAR 2006 IF YOU DRINK DO NOT DRIVE IF YOU DRIVE DO NOT DRINK! 73!

I'll reply to this - I believe you already do not have to know morse code in order to get an amateur radio license. It should be, and still is, a requirement to become an extra class licensee. So, if you want to become an extra class, learn the code. Otherwise, use your license with the priviledges authorized to it.

I do not know who you are, but I agree 100% and always have.

The idea of code as a requirement for higher operating classes is the equivalent of requiring people applying for a drivers license to pass a proficiency test on the operation of a horse and buggy.

Code is of no real use anymore except recreational purposes.

Amateur radio is on a death spiral (see link below) and in my opinion it is largely due to the refusal of amateur radio to keep up with the times.

http://www.speroni.com/FCC/Graphs/ARS%20Total.html

Anyway, just my opinion and you know what they say about those! :-)

Happy New Year everyone!

Gary

Gary Dewrell <dewrell@...> wrote:
v\:* {behavior:url(#default#VML);} o\:* {behavior:url(#default#VML);} w\:* {behavior:url(#default#VML);} .shape {behavior:url(#default#VML);} st1\:*{behavior:url(#default#ieooui) } I do not know who you are, but I agree 100% and always have.

The idea of code as a requirement for higher operating classes is the equivalent of requiring people applying for a drivers license to pass a proficiency test on the operation of a horse and buggy.

Code is of no real use anymore except recreational purposes.

Amateur radio is on a death spiral (see link below) and in my opinion it is largely due to the refusal of amateur radio to keep up with the times.

http://www.speroni.com/FCC/Graphs/ARS%20Total.html

Anyway, just my opinion and you know what they say about those! J

Happy New Year everyone!

Gary

Subject: [Temple_ARC] HAPPY NEW YEAR FOR AMATEUR RADIO CHANGE IS ON THE WAY FOR 2006

Amateur Radio's license restructuring plans for 2006.

I want to make a few points crystal clear:

1. I am not opposed to manual Morse code operation. But Morse code is just another mode and should not be afforded any special priority over others. It is available to those who wish to use it. Morse proficiency should not be required for those who do not wish to use the mode.

2. Manual radiotelegraphy communications has been superceded by more modern, reliable, accurate, faster and efficient means of communication.

3. Requiring manual telegraphy proficiency is not compatible with the radio amateur's mandated objective of contributing to the advancement of the radio art.

4. No evidence exists that Morse proficiency is an indicator of a desirable,motivated or better qualified operator.Just give a listen at 3.975 or 3.898 Extra & General class operators are given notice by the fcc more than any other class operators.

5. The Morse code requirement serves as an advancement barrier to many otherwise qualified individuals.

6. The value of Morse code communications in the Amateur Service is primarily recreational in nature and manual telegraphy proficiency should no longer be a compulsory licensing requirement for any class of Amateur Radio license.

7. The most challenging problem is our attitude towards newcomers and our focus on the mode of CW as the defining characteristic of Amateur Radio. If you do not operate the mode CW or if you are not proficient with the CW mode, then you are not a real ham radio operator.This is our most challenging problem our attitude towards change.If we can overcome this hurdle, promoting Amateur Radio for the future is the easy part. (ARRL Past President, Rod Stafford, W6ROD, wrote of similar issues - I encourage you to read it.)

8. I do not have good ideas on how to change the mode attitudes. I wish I did because I believe the mode attitude is the Achilles Heel of the Amateur Radio Hobby.Changing our attitude towards change and new comers is a key part of growing Amateur radio in the future.

HAPPY NEW YEAR 2006 IF YOU DRINK DO NOT DRIVE IF YOU DRIVE DO NOT DRINK! 73!

1963. Comments on Band Terminology

Yahoo group: Temple_ARC
Date: 2006-01-04 21:29:13 UTC
From: Charlie Schlieper
Topic: 1963 Message: 1963

Happy 2006...

A short while back, I sent a message out about the ISS Crossband Repeater (which is OFF again at present). I called it "ISS X-Band Frequencies." Being someone who clearly knew what the X-Band frequencies really were, this didn't bother me as I was following a noticed trend of others on the net. The "X" of course was just a evolved neat way of saying crossband-- or so I thought.

Since that time, every one of the guys who used "X" for Crossband have received so much FLACK about it, that they appoligized for doing so. Where does that leave me? You can only guess.... Sometimes we simply pick up things too quickly.

The X-Band frequencies range from 5.20 GHz to 10.90 GHz, and includes two of the so called "Microwave" bands, in Ham Radio. These bands are are the 5cm and 3cm in wavelength, respectively. Our 13cm band (2400 MHz) is considered to be in the S-Band.

I know the difference in a DIPLEXER and a DUPLEXER, but I certainly got caught up in this one! Bottom line is, please don't use the expression "X-Band" when you mean "CROSSBAND."

Enjoy Ham Radio!

1968. Cleaning Out INACTIVE Sats...

Yahoo group: Temple_ARC
Date: 2006-01-07 18:29:52 UTC
From: Charlie Schlieper
Topic: 1968 Message: 1968

Satellite tracking programs will generally keep OLD outdated satellites
in their databases until you either CLEAN or DELETE them out. You
might want to check and see if any of the following satellites are still
listed in yours.

UO-14 (Object #20437)
UO-22 (Object #21575)

PO-28 (Object #22829) <Sometimes Installed as "POSAT">

RS-12/13 (Object #21089)

FO-20 (Object #20480)
FO-25 (Object #22828)

AO-49 (Object #27605)

SO-41 (Object #26545)
SO-42 (Object #26549)

I also cleaned out other outdated listings, such as MOZHAYETS 5/
(sometimes shown as MOZ.5/SAFIR/RUBIN), and a few others--
that I didn't jot down. These satellites are ALL considered to be
INACTIVE in status.

well it depends, on what you want to with the software, now if you want to control radios and rotors the best to get might be Nova for Windows. Now if you just to track satellites for free download Satscape both are windows software but the difference is cost.

Nova for Windows cost about 70.00

Satscape is free

Topic: 1973 Message: 1973

> Mike, KE5EUA wrote:
> In regards to your post, what would you recommend a good program for tracking sats.
> SGT Hopwood, Michael, KE5EUA

In reference to Satellite Tracking programs:

There are a number of very good satellite tracking programs available.
My favorite is INSTANTRACK Version 1.55. I have also used SatScape,
STSPlus, LogSat, TrackSat, WinOrbit, and Orbitron, most of which
are either FREE or SHAREWARE.

Other good satellite tracking programs are NOVA, Uni-Trac, SatPC32,
WinTrack, and SCRAP. I always have to stop and think of what "SCRAP"
stands for... "Satellite Contact Report Analysis Prediction." There may be
a few others, but this will get you started.

Enjoy Ham Radio!

1977. New member and need assistance...

Yahoo group: Temple_ARC
Date: 2006-01-09 17:36:31 UTC
From: Michael C. Sherrod
Topic: 1977 Message: 1977

Fellow HAMS,

I recently passed my Tech Plus exam and have some equipment but need assistance to get on the air. I have a Yaesu FT-7800R for my mobile rig using a Comet dual bander antenna (SBB1NMO) 146/446 MHz. I tried to check in on the net last Thursday evening at 7pm but wasn't able to because I had not programmed in the tone (123.0). After I found that out, I've just been waiting for another moment to try it again. I'm not even sure I did the tone correctly. I can hear fine but just can't transmit so anyone can hear me?

My base unit is a Yaesu FT-857D and I have a Yaesu FC-40 Automatic Antenna Tuner. I have a JC Special (T.V. Evans Company) dipole antenna for the 80 and 40 Meter bands that requires no tuning according to the data that came with it. I am wroking on upgrading to the General ticket now. My problem is that I am slightly handicapped and cannot set up my antenna at home so I can begin to use it on any bands that I am allowed to use currently. Until I step up in license class, I'm pretty much restricted to the 2M & 70CM bands. Are there any members who could help me get set up at home and with my mobile rig? I am retired and at home every day. I live here in Temple at 709 Erie Drive. My phone is: 254-899-2244 and my cell phone is: 254-541-6055. Another item is that I do not own this house. I am a renter so I will have to be creative in setting up this antenna. I could use any help that may be out there.

I attended my first club meeting last week and paid my dues and listened to a great presentation on antenna modeling. Most of it made sense to me but I have a lot to learn yet in this great hobby.

So, as we used to say in the Marines...I'm sending up a flare for assistance.

Thanks and 73's to all,

Mike Sherrod

Well Mike (if I may), welcome to the hobby. There is a net tonight on the 82 machine at 1900. Give it a whirl. If you're looking for a rag chew there is always someone on one of the repeaters around here. I usually hang out on the 147.26 machine located in Copperas Cove and quit a few members are either on the 147.14 or the 146.82 machine. Lately I have been hearing more simplex contacts and that's where I made my first contact with N5NIR (Paul). As I say again, welcome and good going, as far as the marines, I'm an army guy.

Nice talking to you last Thursday at the meeting. I work for S&W and am over in Killeen most of the time. I don't get home till around 6pm most nights. Bottom line is that I plan on stopping over Saturday morning if that is convenient and help you get on the air.

I'm tied up tonight and tomorrow but hopefully Wed evening, I can at least get you set up with your tone and the local repeaters programed.

Tom,

This wednesday evening would be great and next Saturday morning is
fine as well. I really appreciate the help and am very anxious to
get on the air.

1982. ISS FM Simplex on 437.550 MHz

Yahoo group: Temple_ARC
Date: 2006-01-09 23:37:09 UTC
From: Charlie Schlieper
Topic: 1982 Message: 1982

Ken Ransom, K5VHO, who used to be at Baylor University in Waco,
reports that Bill McArthur will be operating UHF Simplex this weekend,
January 14 & 15, UTC, using 437.550 MHz SIMPLEX-- aboard the ISS.

To compensate for Doppler Shift, Ken has suggested a simple +/- 5 kHz
scheme, using the following frequencies:

TX RX
> Chnl 1 437.540 437.560 (AOS)
> Chnl 2 437.545 437.555
> Chnl 3 437.550 437.550 <-- Center
> Chnl 4 437.555 437.545
> Chnl 5 437.560 437.540 (LOS)

Enjoy Ham Radio!

1988. ISS Frequency LIST 437.550

Yahoo group: Temple_ARC
Date: 2006-01-11 02:59:51 UTC
From: Charlie Schlieper
Topic: 1988 Message: 1988

An ALTERNATE PLAN for working the ISS via UHF SIMPLEX.

Although the list of frequencies using +\- 5 kHz, as given earlier, is
good for simple radios, with a more sophisticated radio you might
try using these frequencies for Doppler compensation.

In this scheme, the offset changes 4 kHz a step, in opposite directions.
When the Doppler shift passes the mid-point, you change to the next
channel and stay within 2 kHz of the optimum frequency. This maximizes
your advantage, especially when having a weaker signal.

Chnl # TX RX

Chnl 1 437.542 437.558 (Minus Offset, 16 kHz) --AOS
Chnl 2 437.546 437.554 (Minus Offset, 8 kHz)
Chnl 3 437.550 437.550 (NO Offset, Center Freq)
Chnl 4 437.554 437.546 (Plus Offset, 8 kHz)
Chnl 5 437.558 437.542 (Plus Offset, 16 kHz) --LOS

Enjoy Ham Radio!

1995. ClearSpeech Speaker

Yahoo group: Temple_ARC
Date: 2006-01-16 13:56:00 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 1995 Message: 1995

I have had an AmCom ClearSpeech DSP loudspeaker installed in my mobile station for several years. In my opinion, the DSP in the ClearSpeech far outperforms the DSP in my Icom 706M2. A couple of weeks ago, the speaker quit working and would not pass receive audio, regardless of the on/off position of the switch.

I was really sad because I have heard that since Heil aquired the ClearSpeech product they have had lots of trouble with RF feedback and ignition noise, and that the product did not work nearly as well as the AmCom product.

Anyhow, now the good news. The switch on the AmCom does not turn the unit on and off, but instead engages or bypasses the DSP feature. When I disconnected the ClearSpeech from +12 DC and re-connected it, the speaker went back to work. NG5R, Dale tells me this is a common problem where the micro gets confused and needs a hard reset.

Hope this tid bit helps another ham out there.

"Michael C. Sherrod" <msherrod@...> wrote:
Fellow HAMS,

I recently passed my Tech Plus exam and have some equipment but need assistance to get on the air. I have a Yaesu FT-7800R for my mobile rig using a Comet dual bander antenna (SBB1NMO) 146/446 MHz. I tried to check in on the net last Thursday evening at 7pm but wasn't able to because I had not programmed in the tone (123.0). After I found that out, I've just been waiting for another moment to try it again. I'm not even sure I did the tone correctly. I can hear fine but just can't transmit so anyone can hear me?

My base unit is a Yaesu FT-857D and I have a Yaesu FC-40 Automatic Antenna Tuner. I have a JC Special (T.V. Evans Company) dipole antenna for the 80 and 40 Meter bands that requires no tuning according to the data that came with it. I am wroking on upgrading to the General ticket now. My problem is that I am slightly handicapped and cannot set up my antenna at home so I can begin to use it on any bands that I am allowed to use currently. Until I step up in license class, I'm pretty much restricted to the 2M & 70CM bands. Are there any members who could help me get set up at home and with my mobile rig? I am retired and at home every day. I live here in Temple at 709 Erie Drive. My phone is: 254-899-2244 and my cell phone is: 254-541-6055. Another item is that I do not own this

house. I am a renter so I will have to be creative in setting up this antenna. I could use any help that may be out there.

I attended my first club meeting last week and paid my dues and listened to a great presentation on antenna modeling. Most of it made sense to me but I have a lot to learn yet in this great hobby.

So, as we used to say in the Marines...I'm sending up a flare for assistance.

Thanks and 73's to all,

Mike Sherrod

2002. Antenna Thoughts from K5SBU 7213@yahoogroups.com

Yahoo group: Temple_ARC
Date: 2006-01-19 12:41:09 UTC
From: Steve Bosshard
Topic: 2002 Message: 2002

There seems to be a renewed passion for exotic HF antenna arrays like the CCD recently. A few of the 7213 group have jumped in with all four feet. Maybe my experience might be interesting and shed some light on some of the confounding mysteries.

In the decade of the 1980's and 1990's I was consulting the military and industry in solutions to missions in point to point radio communications on high and medium frequencies. This included radio propogation forecasting for global point to point on discrete frequencies as well as long-haul spread spectrum [SS] multi-frequency-hopping applications. SS frequency hopping in the military is better known as ALE or automatic link establishment. When you consider the bandwidth of typical HF and MF antennas they just won't do the trick.

You've likely seen a rotatable log perodic array covering between ten and 60 mHz but how about 2 mHz or even 5 or 8 mHz? Oops, thats big! So single multi-element complex arrays had to be designed that would cover ALL of these frequencies between 2 mHz and 60 mHz. Think about d.c. voltages running down radiators to variactor tuned ferite cores shifting the resonant frequency of the entire array in miliseconds across the spectrum between 2 mHz and 60 mHz, and being able to take five to ten kilowatts of transmitter power!

Certainly a bit more complex than the needs of a typical amateur radio station, but fortunatley we can borrow a bit of theory and engineering practice for use on the 160/80/40 meter bands. The best place to start is some theoretical browsing in some of the best antenna engineering books ever written.

Names like Reinhart, Jasik, Terman and Kraus start poping up right away in the context of bandwidth, directional arrays and current distribution in antenna systems. These engineering texts were written between 1935 and 1950! New is not always better and it doesn't have to come from WalmArt or use parts made in China. You really can make your own stuff!

If you are interested in theory and have access to an engineering library start with a read of Professor of Electrical Engineering, Fred Terman's work at Stanford University. One concept he presents is the continously distributed low impedance magnetic wave along a radiator, repeating itself end to end and where there never develops a high impedance voltage peak. His "Radio Engineering" textbook, published in 1932 and 1937 addresses phased multi-element wire arrays for directional use [pp. 675 - 677]. Also, there is some good stuff in his "Radio Engineers' Handbook", 1943, 1st edition, pp 772 - 774. There is a lot to learn in those few pages but I won't drag anyone

through the cactus, you can do that on your own if you want to know the theory.

Then along came the guy best know to the amateur radio community, John Kraus, W8JK, who was a Professor of Electrical Engineering at Ohio State University. John's book, "Antennas", Mcgraw-Hill, New York, 1950, is still the standard textbook in many EE schools today. John carries Termans work a bit further [twenty years of work there] and discusses "continuous arrays" [pp 110-121]. However his most exciting presentation is chapter 11, [279+] on Arrays of Linear Antennas. Its not jibberish. Really! The part where the kettle drums roll and the cymbals crash is on page 297, the flat-top beam antenna using closely spaced elements all connected with phased feeding lines between them. That is to shape the direction the RF will shoot from. Thus we see the best work in the first "beams" with Kraus.

In the amateur press the journals all carried John Kraus many antenna articles, practical in nature, based on decades of applied theory of those before him. Hugely famous in the fifties were antennas like the W8JK Special, the Lazy-H, the ZL Special and other variations of two element beams with elements from half-wave center fed to multi-wavelengths. John illustrated that by changing the length of the line between the two fed parallel elements, or by twisting it once, you could make the thing have variable beam width, be bi-directional, uni-directional, have huge front to back rations [20 db plus] and other incredible features. On lower frequencies this could be done with simple wire layouts and on higher freqs it could be made from lumber and thin wall pipes or wire taped to bamboo for rotatable arrays. QST, CQ, Ham Radio, and 73 mags were filled with articles by John and other experimenters.

This laid the groundwork for a couple of brilliant Japanese antenna engineers named Uda and Yagi. [Both of whom I have had the pleasure of working on the air years ago]. Their claim to fame was the driven element with passive parasitic elements [reflectors and directors], thus what we call today simply the "Yagi" beam. Actually it is the Yagi-Uda array :-o [Poor Mr. Uda... thats marketing fer ya].

Ok so much for the background, what about this new fangled so called CCD you hear about now? Well first off, it AIN'T new. You can read all about it in Terman's 1932 book I mentioned above. However, he did NOT write a cookbook article in the amateur radio journals. So for that there have been at least fifteen written collabratively by lots of teams of experimenters, the most widely known was written by an inventor named Harry Mills, W4FD and his cohort in crime, Gene Brizendine, W4ATE, in 1978. These guys spent years messing around with the concept of the distributed current part of the radio wave presented by Terman and used the mathmetics developed by Kraus. They actually made something work and had a lot of grief learning what doesn't. We all know about that. Well these guys boiled down a recipe, which if followed, works. Never mind their mind boggeling

fuzzy writing style.

Now comes our very own, Harry Longerich, W4ANL, a worthy scientist in his own right, having a carrer in the U.S.Army and working in the lab with Albert Einstein, and the rest I won't get into. Harry knows his stuff, take my word for it. We worked together on a project once and he has all the right points connected! He wrote a very well written article thats a good read on his experiences with the CCD and uses one today. His signal is as good as any KW on 7213 today and he never runs more than 120 watts; its in the antenna. The proof of the pudding is in the eating.

What's next? Well thats already been done before too :-/ but it goes back to the old texts too. How do you make a CCD bi-directional? Enter Terman again and Kraus on their discussions of combining arrays, feeding them all simultaneously with different lengths of line between them and... and bringing the ends of the parallel radiators forward in a horizontal vee. Now you have narrowed the beamwidth [The marketing boys call it "gain" but we are really talking beamwidth and directional characteristics]. The first reference I found to this was Terman, ibid, 1932, page 676 if you want to see the drawings.

The message is don't waste your time reinventing the wheel; its already invented and there is a pile of them in the barn. Just go dust off the cobwebs and put them on the wagon.

I posted a bunch of photos taken back in the 1980s during a project I did for a DOD client. You can see how we mass produced a bunch of arrays and how we checked them to be sure every part was functional in the field testing. I had a twelve acre antenna testing laboratory back then. Soil was sandy and seawater was a couple of feet below the surface; it was right on the water. The antenna shown in the photos being made is NOT a CCD by the way, but some of the components are similar. Thats all I am going to say about that. Anyhow, have fun and dump those half wave wire dipoles in the dumpster. Thanks for the leadership Harry, Fred, John et al.

2004. Beverage Antenna

Yahoo group: Temple_ARC
Date: 2006-01-19 15:33:41 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 2004 Message: 2004

I just finished constructing a 400 ft, N/S reversable Beverage antenna system. This is a travelling wave antenna design, similar to the technology used in a travelling wave amplifier tube at microwave frequencies.

The Beverage claim to fame is extremely lo noise reception with low angle signals. Noise decreases much more than signal, so there is a net improvement in signal to noise ratio. This is most noticable on 160 M and I am also running tests on 75 and 40M.

The antenna is part of a kit from Dx Engineering www.dxengineering.com called the RBS1. DX Engineering has many unique parts for antenna construction and system construction.

Ham Radio software UPDATE:

WSJT Meteor Scatter Version 5.9.2 was released January 16, 2006.

INFO courtesy of Joe Taylor, K1JT...

WSJT is a FREE computer program for VHF/UHF meteor scatter communications, and uses state of the art digital techniques. It can decode fraction-of-a-second signals reflected from ionized meteor trails, as well as steady signals more than 10 dB weaker than those required for conventional CW. One of its operating modes is particularly well optimized for amateur EME (Earth-Moon-Earth) communications. WSJT is open source software and is licensed under the GNU General Public License.

NU5D reminds us that the January VHF Sweepstakes are this weekend from 1 pm Saturday through 9 pm Sunday local time:

http://www.arrl.org/contests/rules/2006/jan-vhf-ss.html

Also see General Rules for ARRL Contests on Bands Above 50 MHz:

http://www.arrl.org/contests/announcements/rules-vhf.html

If you have six meters, this is a good weekend to look for new states. You can check for propagation just by turning your rig on. Enough folks will be calling cq that you will hear something with any kind of opening. 50 mhz openings can be minutes to hours long, so check more than once if you hear nothing the first time. The contest exchance is simply your grid square - EM10 for around Temple. RST is optional and usually not given. All modes count the same, and I think there is going to be digital activity on at least 50 mhz per the Yahoo DigitalOnSix group.

73, John

2009. CTSSG invite to JOIN

Yahoo group: Temple_ARC
Date: 2006-01-22 10:35:00 UTC
From: Harold Bates
Topic: 2009 Message: 2009

This is a Volunteer Group of Central Texas Storm Spotters. Hence the abbreviation (CTSSG) stands for: CENTRAL TEXAS STORM SPOTTERS GROUP. Our group does not require any special requirements, rules, or test, but a Skywarn Certification is HIGHLY recommended. We are here to help and promote volunteers into Storm Spotting. We only ask that YOU conduct yourself as an adult and follow ALL legal laws and use common sense. We encourage and invite everyone that is interested in storm spotting, spotters and chasers from all groups and all kinds of Radio Operators, Texas Governments, and Local Agencies, to join CTSSG and give your input, time, and experiences to help others in being responsible and SAFE Storm Spotters.

Note: This group was once the original (CTSS), (STARTED BY TOMMIE TAYLOR, HAROLD BATES, and WARREN ROWE), before becoming the LSSN. Due to the issues of LSSN we no longer have ties to them and have reverted back to our original name. Our group is for all that have an interest in helping their community.

Founders for the CTSS Group... Harold Bates, Tommie Taylor, Paul Munsel

Head Quarters address:
CTSSG
13 Dana Dr
Lampasas Tx 76550
(512) 921-6792 Harold Bates / KB5SXV

2017. New WSJT 5.9.3 - Jan 26, 2006

Yahoo group: Temple_ARC
Date: 2006-01-26 21:16:15 UTC
From: Charlie Schlieper
Topic: 2017 Message: 2017

Ham Radio software UPDATE:

WSJT Meteor Scatter Version 5.9.3 was released January 26, 2006.

INFO below is courtesy of Joe Taylor, K1JT...

WSJT is a FREE computer program for VHF/UHF meteor scatter communications, and uses state of the art digital techniques. It can decode fraction-of-a-second signals reflected from ionized meteor trails, as well as steady signals more than 10 dB weaker than those required for conventional CW. One of its operating modes is particularly well optimized for amateur EME (Earth-Moon-Earth) communications. WSJT is open source software and is licensed under the GNU General Public License. Users with older computers (Windows 98 or earlier, memory less than 256 MB, and/or speed lessthan 500 MHz) may still want to run WSJT 4.9.8.

Download at: http://pulsar.princeton.edu/~joe/K1JT/

2023. Cool Beverage

Yahoo group: Temple_ARC
Date: 2006-01-29 20:08:46 UTC
From: Steve Bosshard
Topic: 2023 Message: 2023

Link to pictures of my new DX Engineering RBS1, reversible beverage antenna system.

HYPERLINK "http://www.bosshardradio.com/Gatesville/beverage"http://www.bosshardradio.com/Gatesville/beverage

The antenna runs North and South, 400 ft on top of a 5 ft tall fence. The fence is constructed of 2 3/8□ drill pipe and ¼□ X 4□ X 4□, 5 ft X 20 ft panels. The DX Engineering supplied 450 Ohm transmission line is approximately 8 inches above the top rail pipe of the fence. I use RG6 CATV cable to run from the antenna to the bidirectional switch and rf preamp. On 160 meters at 500 miles, with the preamp, I loose 2 s units of signal and 4 or 5 s units of noise. Really pleased with the outcome. Now I am thinking of 4 Square or Bobtail Curtain.

Steve

Ya'll might remember Sanford, W5FIT servicing the WU microwave site near K5BSW's place near Belfalls. Sanford would check in on the 72 repeater when it was at Moody. He since went to UT Telecom and now has retired - last heard on 146.82 camping at Lake Belton.

K5BSW still attends the Belton hamfest and lives near Terrell.

Hey gang,
I have just been donated a Kenwood TS-50 and matching tuner. My goal is to make this my mobile rig, it came with the mounts, but the previous owner lost the hand mic. I'm sure that won't be much of a problem. What I'm need is some input on a mobile antenna with a limited budget in mind. I know they're not cheap or free, but I do have limited funds. If anyone has any suggestios, or used equiptment, please let me know, thanks,

KA2EMT/ Randy

Much depends on what band or bands you want to operate. For a single band, 10, 15 17 or 20, a single resonator like a hustler resonator and mast will work. For multi bands, maybe a Hi Q screwdriver. For 75 and 40 a bug catcher. My 2 cents,

Steve

Your 2 cents is always welcome Steve, I was thinking of starting off with a single band antenna like maybe 20 or 40 mtrs.

Randy,

I have a couple of Hustler mobile antenna foldover masts and 2 full sets of 10 thru 75 meter coils that I am not using, would like to sell and would make you a deal on. If you are interested, email me direct at bmossman@... with you interests and a phone number so we can get together.

2038. RE: TARC EQUIPMENT

Yahoo group: Temple_ARC
Date: 2006-02-02 15:53:44 UTC
From: GORDON T. BLAND
Topic: 2038 Message: 2038

Good morning to all and members of TARC......

Do we have any club radios and if so does anyone know where they are in case of an emergency? Don't we still have a generator and if so does anyone know where it is in case of emergency? Wouldn't it be a good idea to have the club equipment, if any, in our almost empty storage building on which we are paying rent? Maybe we need to stop paying rent on the storage if we have nothing to store, however, I do think we should have a good generator, maybe two or three good radios, and the stuff we need to make them work. I so move, make a motion, we buy this (by bid) equipment since the club has the money. And, then keep a tight reign on "OUR" (TARC's) stuff! The motion has been made and if this is not good enough maybe someone at the meeting will step up to the plate and make a motion.

The reasons for the questions and absent motion to the Club....I was going to ask them at the meeting tonight but my class of 1956 is having a planning meeting tonight for our (gulp) 50th class reunion here this next May.

Thanks and 73,

Gordon Bland

2048. RE: [Temple_ARC] RE: TARC EQUIPMENT

Yahoo group: Temple_ARC
Date: 2006-02-02 23:48:40 UTC
From: Steve Bosshard
Topic: 2038 Message: 2048

Hello Gordon,

Yours are good and valid questions. Part of the reason that some of the equipment is not at the storage building is space. Have you ever been to the building? In order to get to anything, the generator and other large items had to be removed in order to get to the shelves. The large Honda was stolen from the FD site last year. I have the small Honda at my shop and would be glad to see it returned to the storage building. I also have several items that Charlie dropped by the shop which I would like to see in storage as well. I think there is a 2M radio and PS, but I have not gone through the boxes.

There WAS also a TNC that belongs to TARC. It has been in a box for several years, unused. I hooked it up to a radio in Gatesville and have it on the air, but if it pleases the group, I will be glad to take it off the air and return it to the storage building - it may accrue value as an antique some day. I believe one of the new hams has the HF radio, and I gave one of the officers a 100 ft run of TARC coax Sat before last. There is still a 100 Ft run at the farm that needs to go back to storage as well.

Hope this helps,

73,

Steve

Good morning to all and members of TARC......

Do we have any club radios and if so does anyone know where they are in case of an emergency? Don't we still have a generator and if so does anyone know where it is in case of emergency? Wouldn't it be a good idea to have the club equipment, if any, in our almost empty storage building on which we are paying rent? Maybe we need to stop paying rent on the storage if we have nothing to store, however, I do think we should have a good generator, maybe two or three good radios, and the stuff we need to make them work. I so move, make a motion, we buy this (by bid) equipment since the club has the money. And, then keep a tight reign on "OUR" (TARC's) stuff! The motion has been made and if this is not good enough maybe someone at the meeting will step up to the plate and make a motion.

The reasons for the questions and absent motion to the Club....I was going to ask them at the meeting tonight but my class of 1956 is having a planning meeting tonight for our (gulp) 50th class reunion here this next May.

Thanks and 73,

Gordon Bland

Putting it in an '04 Titan, I think I have the radio mounting worked out, it's the antenna issues I need help with,

thanks

randy, for mounting ideas, go to this website:

http://www.k2bj.com/MOTM_archive/index.htm

and look at the installations. these feature a lot of interior stuff which you don't need, but you can see what folks are doing with antennas. as others have said, a used hustler system may be among the least expensive. a used "screwedriver" in good condition (be patient) is nice since you won't have to change resonators to change bands plus you can cover all of a band by slight returning. if you don't plan to run high power, that simplifiers things a lot too. the most active mobile bands seem to be 40/20/17 right now. the solar flux is so low most of the time that 15 and 10 are not open, but that will change in the next few years (we hope!).

73, john

I would recomend the Little Tarheel screwdriver http://www.tarheelantennas.com/

a great little antenna and the cost is lest than 400.00

now you can go will ham sticks for about 20.00 per band

I'm back on the 20th of Feb so if you help call me on 535-4009 my cell

Playing around in the shack this afternoon, and hooked the Beverage / preamp into the RX input on my Icom ProII and tried the AM broadcast band and below. Almost every 10 KC had a strong AM signal, and below on the NDB nav stations I could hear the Morse ID and then a second ID in the background. Haven't heard AM broadcast like this in years…

"Steve Bosshard (NU5D)" <bosshard@...> wrote:

TV tower collapses near Tyler 04:03 PM CST on Friday, February 3, 2006
From Staff and Wire Reports
TYLER - An East Texas television station was off the air Friday morning after its transmission tower collapsed in a rural area.
Tyler ABC affiliate KLTV is the only VHF television station in that part of East Texas.
KLTV.com
The 1,078-foot tower came crashing down Friday morning.

No one was injured in the collapse, but the collapse took down the station's analog, digital and high-definition antennas on the tower.
The station's Vice President and General Manager Brad Streit said in a statement that the 1,078-foot tower collapsed about ten miles north of Tyler about 7:40 a.m.
The weather was cloudy but tranquil at the time, and Streit said no cause has been determined for the collapse. Streit said there was no apparent damage to the transmitter building next to the tower.
KLTV News Director Kenny Boles said the station is in the process of uplinking their signal via satellite so that cable companies across East Texas can receive it, and is also negotiating to establish a connection with Dish Network and DirecTV so those satellite services can resume carrying the station's programming.
Boles said efforts are being made to move transmitting equipment to the station's downtown Tyler studios in the hope of using a shorter tower as a temporary solution, but he said that could take weeks to set up.
The station is scheduled to carry the Super Bowl on Sunday afternoon. Cox Cable in the Tyler area continues to carry the station's programming, and newscasts will be available online.
On Thursday, Raycom Media completed its purchase of KLTV and 14 other stations from Liberty Corp.

2058. OK Mackay...

Yahoo group: Temple_ARC
Date: 2006-02-06 01:27:23 UTC
From: Steve Bosshard
Topic: 2058 Message: 2058

Got the MSR1020, Mackay 16 transistor FET amplifier from Rusty, delivered to Temple, Friday Night. The amp and power supply are extremely clean and ready for action. I bought a small furniture dolly from Tractor Supply and cut it down for 19☐ rack width. I will be building an enclosure and rails to mount the amp and p/s. The amp is 19☐ wide, 20 deep and about 24 tall and weight around 75 pounds ☐ switching power supplies (4 each) and Fet Amp Module, 4 banks of 4 devices each. First crack out of the box with the ProII at ½ power, the Mackay shot up to 1500 Watts CW. From there on the results are undocumented ..BUT, I am going to have to add some insulation between the plates in the capacitors in the Heathkit 2060 tuner, or get used to Blue Fire inside the tuner. Tried 160, 75 and 40. Made several contacts on 40 this afternoon and got good reports. Pictures when the enclosure is ready.

TNX AGAIN Rusty and Kim,

Steve

From: Bill Killebrew
Topic: 2053 Message: 2062

Temple Daily Telegram Archived Release

Report: Pilot error caused crash

Published February 23, 2005

FORT HOOD - The Black Hawk helicopter pilot's attempt to fly under visual flight rules in poor weather conditions caused the Nov. 29 crash near Bruceville-Eddy, according to information from an Army investigation press release Tuesday.

Seven Fort Hood soldiers died after the 4th Infantry Division UH-60L Black Hawk helicopter hit the support wires to a television broadcast tower while flying in a heavy fog. The seven - two pilots and five passengers - were en route to the Red River Army Depot in Texarkana at the time of the accident.

Maj. Gen. James D. Thurman, commanding general of 4th ID, administratively disciplined the company and battalion commanders, two members of the chain of command. The company commander has been removed from command. The press release noted that details concerning administrative action cannot be released.

"I remain confident in our Aviation Brigade's sound training programs, the professionalism of our aviators and in the combat readiness of our aircraft," said Thurman, a senior aviator with more than 1,800 flight hours. "We will continue to train this formation and prepare it for our nation's call."

The Army has completed the collateral investigation into the cause of the crash of a 4th Infantry Division, said a 4th ID press release.

The investigation, directed by III Corps, was approved and signed Jan. 21, but due to Army regulations, the 4th ID could not release the results until each family had the opportunity to receive a presentation of the report's facts and findings by members of the 4th ID command.

2066. HF Mobile Progress

Yahoo group: Temple_ARC
Date: 2006-02-08 14:56:21 UTC
From: ka2emt_randy
Topic: 2066 Message: 2066

Thanks to Bill, W5ARO. I now have my antenna needs met. He provided me with a rigid mast, bumper mount, and a couple of resonators that will get me on the air. I've got the antenna and radio mounted, but now I'm having a bear of a time finding a place to run the power leads to the battery. The cab of my truck is sealed like Fort Knox. I've never in my life seen a lacking of dust plugs and grommets on any vehicle. I've not yet found a suitable place to run the feed line or the power leads into the cab. Another question I have is this. I have the matching antenna tuner for the radio, if I run the tuner, do I still need to tune the antenna's with an swr meter? Anyway, back to the project, I'll keep ya'll posted on my progress. Thanks for all the antenna suggestions and input,

Randy/ KA2EMT

i've run them along the steering column through that huge grommet. i suppose you have to worry a bit about chaffing the insulation by having it against the steering column which is metal, but the wires should not move any so that should be more of a theoretically issue. just be sure your fuse is close to the battery which is an excellent idea anyway.

73, john

Randy,
At the auto parts stores, they sell rubber plugs and grommets. If you
have access to a hole saw, you can cut a hole about 3/4" in an out of the
way place, insert the plug/grommet, and run you wires through it. After
getting them dressed and in place, you can use silicone or neoprene sealer
to seal around the wires and opening. Steve (NU5D) may have a better place
to get the items, and I am sure he has done many installs like this on
company/public safety vehicles.
73,
Paul N5XMV

From: Bill Mossman
Topic: 2066 Message: 2070

Randy,

I am having the same problem in my wife's new Ford 500. I purchased a new radio and antenna for it, but can find no way to get the power wires thru the firewall. The antenna is going on the trunk lid, so there will be no problem getting the coax to the radio, just the power leads. May have to take it over to the Ford dealer and see if they have an easy solution or will do it for me if I can't find a place to drill a hole thru the firewall.

Purloined from the CTDX list.

Subject: Fleaspeak - the vernacular of hamfest fleamarkets

Fleaspeak - the vernacular of hamfest fleamarkets
English Translation

This rig puts out a BIG signal

It's 50 kHz wide

This is a really good CW rig It doesn't work on SSB
This is a really good SSB rig It doesn't work on CW

This is a really good rig

It doesn't work on CW or SSB

The transmitter is outstanding

It doesn't receive

The receiver is really hot

It doesn't transmit

This rig is really hot

It's stolen

It seems to be a vintage regenerative type

It oscillates

I just retubed it

Got 'em from questionable used tube stock

I just aligned it

The slugs on the transformers are jammed

I don't know if it works

It doesn't work, probably never has

It doesn't chirp

It doesn't chirp because it doesn't transmit

The audio sounds great

The 120Hz buzz is faithfully reproduced

I just had it serviced

I sprayed WD-40 over all the wiring

It comes with the original box

Just brush out the kitty litter

Better buy it now, cause it won't last

No transation needed

Sure, it works at full power

It sucks all it can from the wall

This rig has wide frequency coverage

It drifts up and down and out of band

Frequency stability is great

The VFO doesn't work - you'll have to use crystals

Real popular rig in its day
There were whole HF nets on the repair and maintenance problems

QST gave this one a really great review
The language broke new ground for profanity

It might need a bit of tweaking
Marconi himself couldn't fix it, much less align it

It was used in government service

It was stored outdoors on a wooden pallet

The dial drive may need lubricating
the gears are stripped and the setscrews frozen

I plugged it in to check that it lights up
The light came from the two foot high flames

I'm selling it because I have two of them
I'm getting rid of my parts radio

You won't find one at a better price
Better from the point of view of the seller

This is a collector's item
The manufacturer just went belly up and won't honor the warranty

It came from an estate sale
If you have any problem take it up with the owner

I had it on the air just last night
And you thought the woodpecker was gone

It worked last time I used it

If it still worked I'd still be using it

The only lightning damage was a fuse
The only lightning damage I recognized was a fuse

I have the [?] somewhere I'll send it to you
you'll never see the [?]

I'll help you carry it to the car
I'll do anything to unload this boat anchor

It works ok on 80 meters

It had some parasitics but I got in and really screwed it up and now I want to unload it

The tubes used by this rig are worth the asking price
The rig uses a rare 7360 beam deflection tube for a balanced modulator, but it's blown and you'll spend $80 to get a new one

This is the rig of my dreams I really wanted one of these as a
kid, but now I've got to let it go

As I've gotten older, I've learned what a hunka junk it is

The signal quality of this rig was easily recognizable in its day
The high distortion and bad audio quickly identified this rig

This rig will bring back the feelings and atmosphere of vintage ham gear
The bypass capacitors to the AC line put enough voltage on the
chassis to give you a shock in the lips through the microphone, and it smokes so bad when you turn it on that you'll probably start coughing and wheezing

I'd keep this baby, but my wife is making me clean everything out
I finally got around to giving this thing the proverbial heaveho

There are a couple of other people interested in it

someone sat on it to tie his shoelaces while walking past the table

You'd better buy it now, because I'm leaving soon

The previous buyer and his brother, Guido, are heading back toward the table and they aren't smiling

---

2077. MARS question

Yahoo group: Temple_ARC
Date: 2006-02-12 10:22:43 UTC
From: David
Topic: 2077 Message: 2077

Good morning everyone. Start of a cold day isn't it? Anyway, the reason I'm asking is that I'm running out of ideas here. I was recently acceptted into the Texas Army MARS system and have received my call from them, but I am unable to find just a cheap "starter" radio to use on their freq. Does anyone have any ideas where I may pick one up at a low price, lower would be better due to my budget right now?

Also, I noticed that Ron, AA5RT, had a 2M radio for sale. Ron if you read this, do you still have this radio?

Thanks everyone. I really appreciate this.

ARRL DX Contest, CW

Call: NU5D
Operator(s): KE5C
Station: NU5D

Class: SOAB HP
QTH: TX
Operating Time (hrs): 5

Summary:
Band QSOs Mults

160:
80: 49 32
40: 43 28
20:
15:
10:

Total: 92 60 Total Score = 16,200

Club:

Comments:

NU5D is a new callsign to DX contesting. Steve is putting together a station in central Texas near Gatesville in Coryell County. This was a shakedown test of some low band antennas and a chance to see if everything could work together. We tried to get packet going, but the TNC would not reliably decode the receiver signal, however, everything else pleasantly worked pretty well. I was disappointed that few answered CQ's, but I could work just about anyone I could reliably copy except for a few alligators. I didn't spend any time testing 160 because I wanted to work DX, and DX on 160 down here is pretty limited, even in the 160 contests. The raw rate is slow, but we were continually adjusting this, that and the other and trying to get packet to work.

Rig: Icom 756 Pro 2
Amp: Mackay solid state running 1.5 KW key down.
Tuner: Heath HA2060
Feedline: 450 ohm twin lead
Antenna: single K3LR 160 meter sloper tuned for 80/40
Receive antenna: single 450 foot beverage
Software: TR Log

From: Steve Bosshard
Topic: 2094 Message: 2094

CW speed is defined as the number of words "PARIS" sent per minute.

Using this definition is equivalent to the following:

sending A each second = 10 wpm
sending V each second = 15 wpm
sending J each second = 20 wpm
sending 1 each second = 25 wpm

sending V twice per second = 30 wpm
sending J twice per second = 40 wpm
sending 1 twice per second = 50 wpm

2108. RE: Mammatus Clouds

Yahoo group: Temple_ARC
Date: 2006-02-23 15:49:54 UTC
From: GORDON T. BLAND
Topic: 2108 Message: 2108

No real need to go into "Red Alert" and call a weather net....

Jorn Olsen works for the Dutton-Lainson Co. in Hastings, Nebraska, and lives by Heartwell Park next to Hastings College. The other night, probably just after the big storm hit, he took these photos and sent them to UNL which, then, posted them to the following URL. The stadium lights are at the Hastings College stadium just east of his home.

The clouds are called Mammatus clouds and there's a link on this URL that tells about them. They do not precede a tornado, or foretell a storm, but are formed when the air is already saturated with rain droplets and/or ice crystals and begins to sink. The worst of the storm is usually over when these kind of clouds are seen. They are quite rare, but really beautiful.

WQ5B, Chuck at Lake Whitney v/h
N5NIR, Paul Beaming North from Temple, Horizontal - no rotator.
KE5FEN, David in Killeen, Vertical.

Also nice to hear Eric, KD5TAT from this locale.

There was also an N5 at BeeCaves on Lake Travis - don't hve my list
here in Temple.

I would like to see horizontal polarity, but will work with the majority.

In some nets the NCS starts in one direction and works the compass
around the clock, This net was random and made for many more one on
one qso's than a directed net. Don't know if I would change anything
with the format. Calls and locations might help and also an HF
coordinating freq would be nice. 3905, 08 and 02 were occupied. 3911
- maybe.

Hi Steve,

Neat looking type of antenna switch there! Hadn't
seen that exact type before...

BTW--- TEMKA seems to be down. Maybe you
can check on it when you get a chance.

Thanks,

Charlie, N5TD

2112. Skywarn at UMHB

Yahoo group: Temple_ARC
Date: 2006-02-24 15:01:53 UTC
From: myronmesecke
Topic: 2112 Message: 2112

Just wanted to extend an invitation to all club members to attend Skywarn this Saturday February 25th at the UMHB Chapel. I encourage all members to wear their TARC name badge. The club will have an information table to answer questions about amateur radio and its role in storm spotting and weather safety. Information on the Technician license class that starts March 7th will also be available. A few members have signed on to man the TARC table but there is always room for more help. Robert Nathan, a reporter for the Killeen Daily Herald should be at Skywarn. He is in the process of writing an article about TARC and ham radio. He is also planning to attend next weeks club meeting. A large attendance of club members would be great to see both Saturday and next week. The NWS will also have a short program during Skywarn on the role amateur radio plays in storm safety. Hope to see many of you there. As an added incentive there will be drawings for door prizes. Everyone attending will receive one free door prize ticket and I believe there are approximately 30 door prizes. Come out and learn, spread the word on ham radio and go home a winner, whether you get a prize or not.

2115. Renewal time for TARC 2006

Yahoo group: Temple_ARC
Date: 2006-02-25 22:01:51 UTC
From: John (KE5C)
Topic: 2115 Message: 2115

I have updated the web roster with the latest dues paid information from our secretary:

http://www.tarc.org/club_roster.php

Please let both Michelle Mickelli38@... and I know if you paid your dues but are not on the roster. You may pay your 2006 dues easily online using a credit card or an existing PayPal account:

http://www.tarc.org/paypal_dues.htm

or send your check to:

Temple Amateur Radio Club
P.O. Box 616
Temple, TX 76503

see a description of membership types and dues amount by following the paypal link above (even if you are not going to pay online).

73,
John

2116. Variac

Yahoo group: Temple_ARC

From: Pete Theer
Topic: 2116 Message: 2116

I have two sets of Drake twins R4B/T4XB, Heath SB-200 Amp and other stuff that hasn't been powered up in 10 years. I've heard the horror stories of exploding capacitors, so would like to borrow a variac for a few days to power them up without blowing them up. I had a heavy duty Variac years ago but it went to the dump when I cleaned out my barn and filled it with chickens.

Happy to pick up and return within reasonable distance.

Thanks,
Pete

A cheap substitute is an extension cord with a lamp socket tied in series with one conductor. Start with a 25 watt bulb in the socket for the first 30 minutes. this will allow very reduced current to flow into the set but will allow the capacitors to start to reform if needed. If there is a short in a rectifier or filter instead of burning up a power transformer or such the bulb will light at full brightness and absorb the current. If everything is normal the bulb will glow medium at first then dim a bit but things like tube filaments and dial lamps should light up some. After about 30 minutes if all seems good I switch to a 100 or 150 watt bulb and at that time the radio usually begins to show signs of normal operation and receivers usually make audio. the bulb still provides safety against a bad short and should not light up much at all. I have revived many antique radios this way that have not been powered up for many years.

2118. Making a tower run

Yahoo group: Temple_ARC
Date: 2006-02-26 18:47:02 UTC
From: James Kennedy
Topic: 2118 Message: 2118

Hello I'm making a tower run on Tuesday to pickup two sections of tower in Rhome TX about 172 miles from here , He (W5FAA) QUOTED me $30.00 a section and says he has 150 feet on the ground.

I will be able to pick up about 50 feet I think in my small pickup so you need a section or two ride with me or give me the money before I leave on Tuesday Morning about 7am.

Topic: 2118 Message: 2120

Don't know , I was on the Texas traders net this morning asking if anyone had Rhon 25G I needed 20 feet.

and about 1230 W5FAA call me at home and told said he had 150 feet on the ground and get the pick of the litter so that's what I know.

So Tuesday I'm driving to Rhome to see the section , it beats paying $99 for each section .

2126. March club meeting

Yahoo group: Temple_ARC
Date: 2006-03-02 01:08:34 UTC
From: Myron Mesecke
Topic: 2126 Message: 2126

A reminder that a reporter for the Killeen Daily Herald, a photographer with the Herald and the 15 or so people who signed up for the Tech class have all been extended an invitation to the TARC club meeting Thursday night. It would be great to see a large crowd of members at this meeting. Because of these guests, this meeting affords TARC the opportunity to make a huge positive impression in the area on the benefits and services that amateur radio is able to provide to the community. I would like the meeting to consist mostly of the program and ample time for everyone to visit with our guests and to keep the business portion short and concise. By talking and communicating with our guests TARC can best present a good first image of ham radio.

Myron-President TARC

Well, I went down to Austin yesterday and picked up a new HT. I got the Yaesu FT-60R dualbander , so y'all will be hearin' me more on the local repeaters, not sure that's a bonus for anybody but me, lol. It's a great little radio, just wish I would have gotten the programming software. It's relatively simple to program, but with 1,000 channels, arranged in banks, software would be a premium.

From the ARRL -

Hello

It all starts in two weeks. Are you ready?

As of March 1st, 14 days and counting! All systems GO.

If you still don't know what Hello is, you've been missing a lot in the PIO sphere. It is a major PR campaign by the ARRL for 2006 that has snowballed into not only a first class, national campaign, but also gained international interest. We've been talking to people about it for a year now and plans are still available and posted in last month's CONTACT! [http://www.arrl.org/pio/contact/2006/02/]

The kickoff will be when the April edition of QST starts showing up in mailboxes (expected March 15). This will be quickly followed by the posting of the first of a collection of brand new audio PSA's which are meant for radio stations.

The special 4 page brochure targeted at the NON-ham public will be also be quickly available. You will be able to see a sample of this in QST. Please ask your ham friends to take the brochure out of the magazine and give it to a non-ham friend, relative or co-worker who might become interested. Doctors' offices and similar sites work too.

While the brochures are freely available, it would be most helpful if groups would at least pay for the postage in mailing them out. You can ask for them by emailing your request to hello@... . Be sure to put into your request what they are to be used for, how many, and where to send them. Please remember, they are not meant for hamfests, club meetings and such -- these are places where hams gather. The brochure is meant for distribution to NON-hams. So if you have a school presentation, speech to the Rotary Club or booth at the fair, then these are for you.

The Marketing Department will be selling quantities of the bumper stickers and pins. Expect to see their information about how to buy these coming out soon.

About April 1st the new video PSA should be available. It will be on DVD disks in 2 forms... the regular DVD and also the full, uncompressed .mov files. I believe we will need some help making tapes for those demanding BetaSP versions.

If you have a contact person at a local radio or TV station, now is the time to tell them it is the centennial of broadcasting and we have

a GREAT announcement/PSA series coming up soon for them to use.

Most important of all is that you talk to your group's own members about how they will welcome curious people. Are they open to newcomers? Really? Are they willing to take the time, answer the questions, and just listen to what a non-ham has to say? Who will meet them at the door? How warm is the greeting?

This is our best chance to make a difference. Let's make the most of it!

2137. Re: [Temple_ARC] Digest Number 755

CONTESTER'S RATE SHEET
8 March 2006

Edited by Ward Silver N0AX

Published by the American Radio Relay League
Free to ARRL members!
(Subscription info at the end of newsletter)
****

Happy Birthday Rate Sheet! Can this really be the FOURTH birthday of the Rate Sheet. It seems like I was struggling to upload issue --- --- o---- just yesterday. Simultaneously, we approach 14,000 subscribers around the world. Most excellent - spread the word!

SUMMARY
o Growing Fast - the Russian DX Contest
o WI, OK, ID, VA QSO Parties
o Dayton Doin's - Contest Dinner & QRP 4 Days In May
o Radio History of Marconi and Cell Phones
o 2005 California QSO Party Results
o Water Fun In the Back Yard
o A Handy Calculator Surprise
o Phone Contest Troubleshooting Guide

BULLETINS
o No bulletins this issue

BUSTED QSOS
o In case you were wondering what the one-two punch hit, the listing for the ARRL DX SSB was accidentally omitted. I hope no one forgot about it! (Thanks, Jim AD1C)
o Franki ON5ZO notifies us that the correct info for submitting UBA Contest logs is 30 days after the contest to ubassb@... in

Cabrillo format or UBA Contest, Marc Domen ON7SS, Ferdinand Coosemansstraat 32, B-2600 Antwerpen, BELGIUM.

CONTESTS - 8 MARCH TO 21 MARCH 2006
-o-o --o- - o ooo - -o-o --o- - o ooo -

Note that the following abbreviations are used to condense the contest rules summaries: SO - Single-Op; M2 - Multi-Op - 2 Transmitters; MO - Multi-Op; MS - Multi-Op, Single Transmitter; MM - Multi-Op, Multiple Transmitters; AB - All Band; SB - Single Band; S/P/C - State/Province/DXCC Entity; HP - High Power (>100 W); LP - Low Power; QRP (5W or less)

HF CONTESTS

RSGB Commonwealth Contest--CW, sponsored by the RSGB from 1000Z Mar 11 -1000Z Mar 12. Open to British Commonwealth stations only, work stations once per band outside your own call area. HQ stations may be worked by everyone and count as a separate call area. Frequencies: lower 30 kHz of 80-10 meters. Categories: SO--open (full-time), --restricted (12 hrs max), Headquarters -- MO and SO, no spotting assistance. Scoring: 5 pts/QSO, first 3 QSOs with a call area count 25 pts. For more information: http://www.rsgbhfcc.org. Logs due April 10 to commonwealth.contest@....

Wisconsin QSO Party--Phone/CW, sponsored by the West Allis RAC from 1800Z Mar 12 - 0100Z Mar 13. Frequencies (MHz): CW 3.550,

3.705,7.050, 14.050, and 21 - 440, Phone 3.890, 7.230, 14.290, 21.350, 28.400, 50 - 440, no repeater QSOs. Categories: SO, MS, MM and Mobile. No county line operations. Exchange: S/P/C or WI county. QSO Points: Phone - 1 pt, CW - 2 pts. Score: Pwr mult x QSO pts x WI counties (max 72), WI stations use QSO pts x WI counties + S/P/C, WI mobiles/portables add 500 bonus points for county with 12 or more QSOs. Power multiplier: x2 (QRP), x1.5 (<150 W), x1 (HP). For more information: http://www.warac.org. Logs due April 13 to k9kr@... or Wisconsin QSO Party, West Allis RAC, PO Box 1072, Milwaukee, WI 53201.

Oklahoma QSO Party--Phone/CW/Digital, sponsored by the Oklahoma DX Association (OKDXA) from 1400Z Mar 11 - 0200Z Mar 12 and 1400Z - 2000Z Mar 12. Frequencies (MHz): SSB--3.860, 7.260, 14.260, 21.360, 28.360; CW--3.545, 7.045, 14.045, 21.045, 28.045. Categories: SOHF-HP (>100W), -LP, -QRP (<5W), SO-VHF, MS, Rover (OK only). Exchange: signal report and OK county or S/P/C (DX sends "DX"). QSO points: Phone--2 pts, CW/Digital--3 pts. Score: QSO points x OK counties (OK stations use OK counties + S/P/C) counted only once. For more information: http://www.okdxa.org. Logs due April 30 to logs@... (ADIF or Cabrillo format preferred) or OKDXA, PO Box 2591, Claremore, OK 74018-2591 (<100 QSOs only).

Idaho QSO Party--CW/Phone/Digital, sponsored by the Voice of Idaho (VOI) Amateur Radio Club, from 1300Z Mar 11 - 0100Z Mar 12 and 1300Z Mar 12 to 0100Z Mar 13. Frequencies (MHz): CW - 35 kHz above band edge, Phone - 7.260, 14.260, 21.335, 28.470 MHz, plus 50, 144, 440 MHz. Categories: SO, MS, MM, Mobile, School, Special Event, all may be QRP/LP/HP (150 W or more) and Mixed/CW/Phone/Digital. QSO Points: see Web site. Score: QSO Points x ID counties (non-ID stations use S/C), all multipliers count once per mode. For more information: http://www.voiceofidaho.org. Logs due 30 days after the contest to qsoparty@... or as listed on the Web site.

North American RTTY Sprint, sponsored by NCJ from 0000Z-0400Z Mar 12. Frequencies 80 -- 20 meters. North American stations work everyone; others work NA stations only. Exchange both callsigns, serial number, name, and S/P/C. The same station can be worked multiple times provided 3 contacts separate the contact in both logs, regardless of band. QSY rule: Stations calling CQ, QRZ, etc, may only work one station in response to that call; they must then move at least 1 kHz before working another station or 5 kHz before soliciting another call. Once you are required to QSY, you may not make a new QSO on the previous frequency until you have made a contact at least 1 or 5 kHz (as required) away. For more information: http://www.ncjweb.com. Logs due 7 days after the contest via the contest Web site, to rttysprint@..., or Douglas McDuff W4OX, 10380 SW 112th St, Miami, FL 33176.

EA PSK31 Contest, sponsored by the Unión de Radioaficionados Españoles (URE), from 1600Z Mar 11 -1600Z Mar 12. Frequencies: 80-10

meters. Categories: SOAB, SOSB, MO. Exchange: RST + serial number or EA province. Scoring: own continent 1 pt on 20-10 meters, 2 pts on 80-40 meters, diff. cont. 3 pts on 20-10 and 6 pts on 80-40. Score: QSO pts x EADX100 countries + EA provinces + US/VE/JA/VK call areas. For more information: http://www.ure.es/hf/concursos/eapsk31/baseseapsk31ingles.pdf. Logs due Apr 12 to psk31@ure.es.

AGCW QRP Contest--CW, sponsored by the DL Activity Group CW (AGCW-DL) from 1400Z - 2000Z Mar 11. Frequencies: 80 - 10-meters. Categories: SO-VLP (<1 W), QRP (<5 W), MP (<25 W), QRO. Exchange: RST, serial number, category, and AGCW member number or "nm" if non-member. QSO Points: QRP-VLP, QRP-QRP, VLP-QRP and VLP-VLP - 3 pts, QRP-MP and QRO - 2 pts, QRO-QRO not allowed. Score: QSO points x AGCW members counted once per band. For more information: http://www.agcw.org. Logs due Mar 31 to qrp-test@... or Edmund Ramm DK3UZ, Anderheitsallee 24, Bramfeld, D-22175 Hamburg, Germany.

Russian DX Contest--CW/SSB, from 1200Z Mar 18 - 1200Z Mar 19. Frequencies: 160 - 10 meters. Categories: SOAB -HP, -LP, -QRP (Mixed only), SOSB, MS (10-min rule), M2, SWL, SO may enter Mixed Mode, CW, or SSB, MS,M2 and SWL are Mixed only. Exchange: RS(T) + serial number, RU stations--RS(T) + Oblast designator. QSO points: own entity - 2 pts, different entity, same continent - 3 pts, diff. cont. - 5 pts, with Russians - 10 pts. Score: QSO points x DXCC entity + Oblasts, counted once per band. For more information: http://www.rdxc.org. Logs due 45 days after the contest to rusdxc@... or to Russian DX Contest, PO Box 88, 119311 Moscow, Russia.

Virginia QSO Party--Phone/CW/Digital, sponsored by the Sterling Park ARC from 1800Z Mar 18-0200Z Mar 20. Frequencies (MHz): CW 1.805 and 50 kHz above band edge, Phone 1.845, 3.860, 7.260, 14.270, 21.370, 28.370, Novice/Tech 28.370, VHF/UHF 50.130, 144.200, 146.58, 223.50, 446.00, Digital on common frequencies. No repeater or crossmode QSOs. Categories: SO, MS, MM and Mobile. Exchange: serial number and VA county/city or S/P/C. QSO points: Phone-- 1 pt, CW or Digital--2 pts, VA Mobile--3 pts. Score: QSO points × VA city/counties + S/P/C (counted only once). VA mobiles add 100 pts per VA city/county activated. Add 500 pts for QSO with K4NVA. For more information: http://www.qsl.net/sterling/VA_QSO_Party/QSOParty.htm. Logs due Apr 15 to nq4k@... or Virginia QSO Party, Call Box 599, Sterling, VA 20167.

10-10 Mobile Contest--any mode, sponsored by 10-10 International from 0000Z-2359Z Mar 18. Frequencies: 10-meters only. Categories: Fixed, Mobile. Exchange: Call, Name, S/P/C, county (US, Canada, and England) and 10-10 membership number, if any. QSO Points: 1 pt/QSO. Score: Fixed--QSO Points x counties, Mobiles--QSO Points x counties worked + counties activated. For more information: http://www.ten-ten.org. Logs due Apr 4 to tentencontest@... or Steve Rasmussen N0WY,

312 N 6th Street, Plattsmouth, NE 68048.

CLARA and Family HF Contest--Phone/CW--sponsored by the Canadian Ladies ARA, from 1700Z Mar 18-1700Z Mar 19. Frequencies (MHz): CW 14.033, 21.033, 7.033, 3.688, Phone 28.300, 21.225, 14.120 14.285, 7.033, 7.200, 3.750, 3.900, work CLARA and YL stations once per band/mode. Crossmode contacts count as phone for both stations. Categories: SO only, no time limit. Exchange: RS(T), name, QTH, and whether CLARA member, Family member, non-member YL, or OM. QSO Points: 5 pts for CLARA-members, 2 pts for CLARA family members, 3 pts for non-CLARA YLs, 1 pt for OMs. Multipliers are VE provinces and DXCC entities (only if QSO with YL) counted only once. Score: QSO points x multipliers. For more information: http://www.clara.comm.sfu.ca/. Logs due April 24 to ve7vpe@... or Paulette Schouten, VE7VPE, c/o VECTOR, 3301 East Pender Street, Vancouver, BC V5K 5J3, Canada.

9KCC Contest--CW/SSB, sponsored by the 9K Contest Club (Kuwait) from 1200Z -- 1600Z Mar 19. Frequencies: 15-meters only, work stations only once. Categories: SO, SSB or CW for 9K or non-9K. Exchange: RS(T) and serial number. QSO Points: 1 pt/QSO. Score: QSO points x DXCC entities + number of different 9K stations. For more information: http://www.qsl.net/9kcc/9KCCRule.htm. Logs due 30 days after the contest to 9k2rr@... or Faisal N Al-Ajmi (9K2RR) PO Box 1124, Alfarwanya 80000 Kuwait

BARTG Spring RTTY Contest--sponsored by the British Amateur Radio Teledata Group from 0200Z Mar 18 - 0200Z Mar 20. Frequencies: 80 -- 10 meters. Categories: SO-Expert, SOSB, SOAB (one band change per 5 min), SOAB-6 hour, MS, MM, and SWL. SO operate 30 hours max. SOAB-6 first six hours. Operators with a Top Ten log during the past three years must enter as an Expert. Exchange: three-digit serial number and four-digit time. Multipliers: DXCC entities + W/VE/JA/VK call areas, counted once per band. Score: QSOs x multiplier x continents (count only once). For more information: http://www.bartg.demon.co.uk. Logs via email only in Cabrillo format due May 1 to ska@... (with the call and entry class in the subject line and the log included as an attachment).

Konstantin RU3AA asks that we note the correct rules Web URL for the Yuri Gargarin contest sponsored by Patriot magazine (April 8th and 9th) is www.srr.su/contest/GC/gc2006re.htm.

VHF+ CONTESTS

EU EME Contest--CW/SSB, 0000Z March 11 - 2400Z March 12. Frequencies: 432 MHz, 5.7 GHz & up. Categories: Single and Multi-band, QRP and QRO--based on EIRP, Pro, CW, Mixed, Assisted. Exchange: callsigns TMO/RST and "R". QSO Points: 432--100 pts for random, 10 pts for scheduled QSO, 5.7 GHz and higher--100 pts/QSO. Score: QSO Points (x2 for QSOs at 5.7 GHz and above) x S/P/C from random QSOs (or any QSOs at 5.7 GHz and above). For more information: http://www.dubus.org or

info@.... Logs due Jun 7 to f6hye@... or Patrick
Magnin, F6HYE, Marcorens, F-74140 Ballaison, France.

ARRL CONTEST NEWS -

The expected move of W1AW's 160-meter frequency from 1817.5 kHz has been postponed until later this year in order to find a frequency that will not conflict with an established calling or activity frequency.

The 2006 Field Day packet (available at http://www.arrl.org/contests.forms) contains an FAQ on the new Get On The Air(GOTA) station rules. The basic idea is that 50 Bonus points are awarded when a specific GOTA operator completes 50 QSOs and another 50 when they hit 100. Bonus points are doubled if there is a full-time GOTA coach present and mentoring. (No "pooling" of QSOs to reach a bonus level.) And there is a limit of 500 QSOs for the GOTA station. (Thanks, Dan N1ND)

- - -

The North Coast Contesters are pleased to announce the 14th Annual Dayton Contest Dinner on Saturday night, May 20, 2006 at 6:30. MC'ed by John K1AR, Contest Hall of Fame Inductions will be announced by Mr. CQ Worldwide, Bob K3EST. The dinner is held in the Van Cleve Ballroom of the Crowne Plaza Hotel at 5th and Jefferson Streets, next to the Convention Center in downtown Dayton. Price is $34.00 per person and seating is limited to 300. Tickets may be ordered until May 7th from Craig Clark K1QX at:
Radioware and Radio Bookstore
PO Box 209
Rindge, NH 03461
http://www.radio-ware.com
Credit card orders can be placed Monday through Friday from 10 AM to 6 PM eastern USA time at 1-800-457-7373 (1-603-899-6957 for international calls) or by fax at 1-603-899-6826 any time. Email is accepted at jcclark@.... Along with your card number, include your call sign and return address. (No COD orders!) Tickets will be mailed by First Class mail by May 10th, so leave plenty of time!

QRP ARCI will host its 11th Four Days In May event in conjunction with the Dayton Hamvention. It's at the Holiday Inn in Fairborn on Dayton's NE corner. There will be a full day of technical seminars on Thursday, a construction contest with some amazing entries, vendor night on Friday at 8PM, and a banquet on Saturday night at 7PM. More details can be found at http://fdim.qrparci.org.(Thanks, Jim W4QO)

We all know about Marconi's adventures in spanning the Atlantic, but where did he really invent radio? Why, in Salvan, the Cradle of Wireless, of course! Read all about it from his young assistant of the time in the February 2006 issue of Microwave Journal. (http://www.mwjournal.com/Journal/article.asp?HH_ID=AR_468)

The word 'cell' in cell phone which is short for 'cellular.' The term was coined for the early mobile phone system known as AMPS in the telecommunications industry (Advanced Mobile Phone System) in contrast to the several predecessor mobile phone systems such as IMTS (Improved Mobile Telephone Service) previously fielded by Bell and other private carriers known as RCCs (Radio Common Carriers. If you are interested in Radio Common Carrier history, take a look at http://www.wirelessweek.com/article/CA153848.html?spacedesc=News. (Thanks, Jim WB5WPA)

Radio Wave Propagation - Volume 2 by M.H. De Canck ON5AU of Belgium is now released. The author's unique presentation on the subject is not only interesting, but actually makes it a fun learning process - something not often said about this complex subject. For example, plot your destination and "see" your signal travel in animation using the author's unique Presentation Form Wizards. For more information, browse to: http://www.antennex.com/news/index.html (Thanks, Steve K7LXC)

AC Log 3.0 now supports the newly developed Who's On The Air (WOTA) database! You'll find more information about WOTA by visiting http://www.wotadb.org. To implement WOTA, click Settings > DX Spotting > WOTA, complete the form that appears and click the Participate check box. (Thanks, Scott N3FJP)

Good advice! Just because someone knows Morse Code doesn't mean they're familiar with CW net operating procedures. There is a whole set of QN* signals and prosigns that are used in CW traffic nets not encountered anywhere else in Amateur Radio. A good description of how they work can be found on the Web at: http://www.qsl.net/n5lf/cw-nts.html There is a list of CW nets at: http://www.qsl.net/ki8du/netsked_5.htm. If you want to know a whole bunch of Q-signals, including those used in aviation, try http://www.wemsi.org/qsigs.html (Thanks, Scott W5ESE)

Dick W7ZR has added a feature on his Web site (http://www.w7zr.com) for anyone to list for FREE any radio item(s) that have been stolen. (Thanks, Dick W7ZR)

New Contest Country Files (CTY files) are available. You can download them from http://www.k1ea.com/cty/history.htm#CTY-1602. (Thanks, Jim AD1C)

KA2RTD Mohamed, station manager of the United Nations' station has stated that no one was at 4U1UN for ARRL DX CW so it was a pirate! (Thanks, Bernie W3UR and Tim K3LR)

You should all be pretty fluent in Portuguese by now! Heaven forbid that you might lose something on your way to or from Brazil, but if you do, here are some helpful phrases from the Lonely Planet phrasebook:
- I've lost... - Perdi - p'r-DEE
- my bags - as malas - ash MAH-lash
- my money - o dinheiro - u dee-NYEY-ru
- my passport - o passaporte - u pah-a-POHR-t'
- my ticket - o bilhete - bee-LYE-t'

URL OF THE WEEK - A hugely informative Web site on Maritime Communications is hosted by the US Coast Guard at http://www.navcen.uscg.gov/marcomms/default.htm. You learn something new every day!

ARRL CONTEST RESULTS NEWS - Mode breakdowns are now included for entries in the 2005 EME Contest, whose on-line writeup has been opened to ARRL members. (Non-members later!) The QST version of the 2005 November SS CW results article is in production. Log Checking reports and results databases for 2005 November Sweepstakes are being prepared for release by the Web services team. The Web databases have been created for both 2005 Phone and CW Sweepstakes and sent to Web services for processing for online access.

The complete list of Logs Received for the 2006 ARRL January VHF Sweepstakes has been posted at http://www.arrl.org/contests/claimed. The list includes both the electronic and paper submissions. If you find an error in your listing or your entry is missing please contact N1ND at n1nd@... or by phone at 860-594-0232. If you submitted electronically please have your receipt number available. (Thanks, Dan N1ND)

- - -

Results of the 2005 California QSO Party (CQP) are finished and you can read all about it in the March 2006 Northern California Contest Club JUG newsletter by Kevin N6RCE at http://www.nccc.cc/newsletter.html. (Thanks, Marc W6ZZZ)

Preliminary SSB Sprint results are now posted at http://www.ncjweb.com/sprintssbresultsfeb2006.txt. If you note any errors, please let contest manager K4MA know at k4ma@.... (Thanks, Jim K4MA)

Results of the 2006 UK DX RTTY Contest 2006 are ready and can be found at http://www.ukdx.srars.org. (Thanks, Jurij MM0DFV)

oo oo-o oo - ooo -o --- - -ooo o-o --- -o- o
TECHNICAL TIPS AND INFORMATION

-o-- --- oo- o-o o -o --- - - o-o -o-- oo -o --o

And you think you have noise problems?
http://www.sciencedaily.com/releases/2006/02/060221084628.htm
(Thanks, Jim KR1S)

Here's a good way to power a handheld VHF radio, a portable QRP rig, or an accessory from lower-voltage batteries. Digi-Key (http://www.digikey.com) sells a little switching supply module (part number PT5041A-ND) made by TI that puts out 12V @ 1A from an input voltage of 4.75 to 11V for $15.85. It only requires a 100 ufd output capacitor. You could run a set of D-cells dry and still get a regulated 12 V out. (Thanks, Steve KD1JV)

Putting up some wire antennas? K2ZR says, "For whatever antenna applications that require a "pulley", I strongly recommend a 'sheet/bullet block.' (http://tinyurl.com/q4fm5) These are used on sailboats and go way beyond the quality of anything you'll find in a hardware store. There are many sizes and styles. I find the #083 (with a becket - to provide a pull down loop) works great with just about any wire antenna installation." You *do* know what a 'becket' is, don't you?

Here's another helpful set of directions, this one for getting multiple open-wire feed lines through a wall and easily switched.
1) Terminate each parallel feedline with a 5-ft section of shielded parallel line (see ARRL Antenna Book) made from 2 5-ft lengths of RG-8X or RG-213, each terminated with a PL-259.
2) At a grounded entrance panel or grounding strip, install four UHF bulkhead connectors and connect the shielded parallel feed lines to them outside.
3) Manufacture another shielded parallel feedline jumper long enough to reach from your tuner to the entrance panel. Connect it permanently to the tuner and terminate the other end with quick-disconnect, push-on PL-259's.
4) When ready to operate, plug the shielded parallel jumper from the tuner into the bulkhead connectors for whichever antenna you desire to use.
5) When not operating, disconnect the tuner from the entrance panel, and short the UHF bulkhead terminals to ground using PL-259 push-on plugs that have been converted with short circuits inside them.
(Thanks, Mark N1LO)

For heavy-handed operators (you know who you are) who can't keep a keyer paddle still, check out the Radio Shack "Jelly Sticky Pad" (part number 25-2516). At 4" W x 7.25" deep, it's the perfect fit under just about any paddle. (Thanks, Bob N6TV)

Whoops! You've got to get coax or a radial wire or ??? across a concrete walkway in your yard? How about a little water fun from Bob W9GE? "Build a water drill out of a piece of plastic pipe a bit bigger than what you want to bury. Use some fittings to connect a

water hose to one end. Turn on the water and work your way under the walkway. When you reach the other side just disconnect the water and run the coax or wire through the pipe that is now under the walk." Other contributors note that special nozzles are available for installing irrigation or sprinkler pipes in just this way. You'll also need to dig out a small sump pit on each end.

Care to download a great electronics book about op-amps? http://www.analog.com/library/analogDialogue/archives/39-05/op_amp_applications_handbook.html (Thanks, Bob W9YA)

Check out this website if you are looking for older technical info, even older Handbooks
http://www.pmillett.com/tecnical_books_online.htm
There are a lot of good old books. They are good for research on tube subjects, and for tube data, like Sylvania, GE, and RCA tube manuals, see the tube data page of this site. (Thanks, Curt W4QBU)

TECHNICAL LINK OF THE WEEK - While doing a Google search on a constant (number) to try to discover its name, I found out that Google (http://www.google.com) does calculations if you type the expression into the search field. The Google calculator does conversions as well as calculations, recognizes pi and e, and does trig and complex numbers. To give examples of what it's capable of, try some of these "search" expressions:
sin(45 degrees)
pi in degrees
2m^3 in gallons
2PI*4.7E-6*7.04E6
5*5/2
e^-1
250 ml as tablespoons
SQRT(-4)
Arcsin(.5)
Arcsin(.5) in degrees
(1+2i)*(1-2i)
20Log(50/7)
(Thanks, Nick WA5BDU)

PHONE CONTEST TROUBLESHOOTING GUIDE

SYMPTOM
- CAUSE
- CORRECTIVE ACTION

Band unusually quiet, can't see rig
- You have headphones on sideways
- Remove boom mike from your ear and rotate headphones ninety degrees

Opposite wall covered with fluorescent lights
- You have fallen over backward
- Have yourself duct taped to operating desk

Mouth contains peanuts, back of head covered with peanut shells
- You have fallen forward
- Have yourself duct taped to operating chair

Coffee tasteless, front of your shirt is wet
a. - Mouth not open
- Unlikely since this is a phone contest
b. - Cup applied to wrong part of face
- Take a restroom break, practice in mirror

Your transmit audio is garbled and indistinct
- Boom mike immersed in your coffee cup
- Hide headset and swipe the one from the dead band's radio

Rhythmic crackling QRM wiping out the entire band
- You are eating potato chips
- Suck on them instead

Sharp pain in one arm
- Multiplier operator is trying to get you to stand by
- Talk faster and stomp on footswitch

Sharp pain in one foot
- You and the multiplier operator are both trying to use the same footswitch
- Kick wildly in all directions and run him off!

Rig Blurred
- Relief operator is trying to get you out of the chair
- Yell, "I'm running Europe!" and grab onto chair arms

Floor moving
- You are being carried away
- Find out if you are being taken to a different operating chair

Room seems unusually dark
a. - You are asleep under the operating desk
- Stand up without hitting your head and reclaim operating chair
b. - You are asleep with old QST over your face
- Act like you were just reading without your glasses

Radio suddenly takes on colorful aspect and textures
- You are asleep in the M&M's dish
- Eat M&Ms

Bottom cold and clammy
- You forgot to put on pants after last sleep break
- Reinstall pants without losing run frequency

Bottom warm and clammy
- Improper bladder control
- Complain about previous operator's lack of shack etiquette

Other operators are looking at you and smiling
- You fell asleep and empty soda cans are now stacked on your head
- Don't swallow or move!

Heavy weight pressing on one side
- Mult operator fell asleep and is leaning on you
- Stack soda cans on his head

Station you're working is using unfamiliar procedures
- You are operating on MARS net outside of band
- Remove one letter from the prefix and log it!

Caller has the best audio you've ever heard
- You are attempting to work shortwave broadcast station news program
- Add a number somewhere in the call sign and log it!

Callers only send one letter at a time
- You are attempting to make a QSO with intermodulation products
- Accumulate enough characters and log it!

Ears ringing, mind unusually clear, station owner yelling
- You just blew up the amplifier
- Point at the youngest operator and keep operating barefoot

Hiram Percy Maxim tries to correct the call sign you just entered
- Personal sleep deprivation limitation exceeded
- Enter random call from Super Check Partial and drink a Mountain Dew

Don't recognize anyone or the room you're in
- You showed up at the wrong station
- See if they have an available operating position

73, Ward N0AX

ACKNOWLEDGEMENTS

According to the hamfest brochure, which is also available on-
line: "Talk-in Freqs: 146.82- (PL 123.0)".

From the ARRL listing: "HamExpo, Temple ARC, Talk-In: 146.820 - (PL
123.0)"

Thanks Mike for your thorough listings! The folks who need to use the
repeater shouldn't have any trouble.

73, John

2147. Temple's 125th birthday

Yahoo group: Temple_ARC
Date: 2006-03-13 18:14:08 UTC
From: Myron Mesecke
Topic: 2147 Message: 2147

TARC has been asked if we might be able to help out during the
Blommin' Temple festival that is the weekend of April 8th and 9th.
It is more a need for manpower than communications but it would be
helpful if we are able to communicate amongst ourselves.
They are looking to man shifts of 2 hours in length. The posts would be
at the various parking lots, VIP parking for the concert performers,
shuttle bus drop off, parking for the car show participants, etc.
I said that I would get the word out on here and on the Monday night
net and see if we get any response.
They want a headcount by this Friday which I told them would limit the
ability to get the word to everyone since the bulletin and club
meeting won't happen until after they need a count. If you are
interested in volunteering please let me know. At least the shifts are
short. I haven't confirmed it but there may be a chance that
volunteers get free access to the events.

From: David
Topic: 2152 Message: 2152

I just have a quick question for the TARC group here.
I need to find another HT for mine has gone down. Now, budget being the main thing for me right now, does anyone know where I may be able to pick up just a simple 2M HT for very little money?
It doesn't have to have all the bells and whistle's that alot of the newer models have today. I'm looking for a simple 2M HT that can be programmed and has the ability to program tones in it for repeaters.

Thanks everyone. This is a great place for hams to learn and help.

for forty.

Last week week we had 35 checkin's now we are shooting for over 40. Please
remind and tell your friends about the net tonight and lets see if we can
beat the 35 we had last week. Our goal is to be the largest checkin SWOT net
in the Central US as it was 4 years ago.

Please dont forget the Eastern Oklahoma SWOT Net tonight at 8pm on 144.250
usb. Net Control is John KM5ES in Stidham,Oklahoma EM25di. I start looking
south toward Dallas-Ft. Worth at 8 then following the clock,sometimes a
little earlier as the clock goes most times I will be looking north between
8:45 pm and a little after 9 and finish most times at the latest 9:15 back
south. Please join us you dont have to be a SWOT member to chech in,and
everyone is welcome to join us.

2156. Airshow sign up

Yahoo group: Temple_ARC
Date: 2006-03-18 16:22:39 UTC
From: Darwin
Topic: 2156 Message: 2156

The information below is from Gary with the air show concerning a meeting this Sunday. Feel free to attend the meeting if desired. However it will not be necessary to do so in order to get on the schedule. Instead just send me an email indicating your preference for when you would like to volunteer for our work at the show. Indicate Fri PM, Sat AM, Sat PM, Sun AM, or Sun PM and I will put you on the schedule and get back with you on the specifics. Please send the email to k5doa@... (not this k5doa2 address, that will ensure you don't get lost in all the various list messages). Use the term airshow somewhere in the subject of the email. Later I will publish interim schedules here to ensure that you are on the list and to confirm the times.

As in the last couple of years, we will actually have no direct communications duties associated with the show. That will all be handled on commercial frequencies. Instead our duties will consist of signing commercial radios in and out and changing batteries as required. So this is not a normal communications support activity. That chance will come next at the 4th of July parade. An exception would occur if we have a severe weather event, in which case we would coordinate between the local Skywarn nets and the airshow frequencies.

Please let me know if you would like to volunteer this year. 73 - Darwin

---

Subj:It's Airshow Time!! - Volunteer Sign Up this Sunday
Date:3/17/2006 1:02:00 PM Central Standard Time
From:gary@...
To:airshow@...
Sent from the Internet

Yes - it's that time of the year! The 2006 Central Texas Airshow will be May 5th, 6th and 7th. That's right, the night show was such a big success, we're going to repeat it this year.

And of course, we can't do it without your help! Volunteers are crucial to our success and we hope you will return again this year.

Volunteer Info meetings will be held at the Temple Airport on:

March 19 - 2:00 pm - sign up for shifts
April 9 - 2:00 pm - pick up posters and confirm volunteer shifts April 30 - 2:00 pm - final meeting - pick up credentials and t-shirt coupons.

Please pass this on to your friends and family - anyone that might be interested in helping out!

More information is available at http://www.centraltexasairshow.com/ or feel free to email me at airshow@...!

2157. Ham radio plug in teenager show.

Yahoo group: Temple_ARC
Date: 2006-03-19 02:04:20 UTC
From: Michael Hopwood
Topic: 2157 Message: 2157

While watching "Drake and Josh" episode Alien invasion on nickelodeon Drake and josh wanted to play a practical joke on their sister. As they imposed a space craft image on a computer screen she tried to hear the aliens using what looked to be a shortwave receiver a good ole bearcat scanner, an hf rig icom I believe, and a couple other useful pieces of equipment (one being a dummy load by mfj). Drake and josh mentioned having a friend in the local schools ham radio club and borrowed a transceiver to trick their sister into thinking she heard aliens. I won't go into detail about the whole episode but it's the little things that bring awareness to the hobby.

If we could only get it in soap operas now.
Michael D. Hopwood Jr.

2159. Nearby Hamfests, swap meets

Yahoo group: Temple_ARC
Date: 2006-03-18 16:52:01 UTC
From: ka2emt_randy
Topic: 2159 Message: 2159

With Spring on our doorstep I know it's time for hamfests and swapmeets to start gearing up. Is there a web site available, besides arrl, that may list hamfests and swap meets in the central Texas areas? Having Saturdays off on my work schedule I'd like to make as many as I can within a reasonable driving distance. Thanks,

Randy

Some was asking about swap meets - below is Austin Swap Meet text.

NU5D

----- Original Message -----
From: "Schmidt Jeff-rsja60" <Jeff.Schmidt@...>
To: <haminfo@...>
Sent: Monday, March 20, 2006 10:50 AM
Subject: Austin SwapNet 03/19/06

| Austin SwapNet 03/19/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org
|
| Omni-directional Nulls,
|
| Finally, some severe weather and rain in Central Texas! A few days of drizzle and
| then a series of fairly severe squalls raced thru our area Sunday night. Spotters on
| 147.36 and 147.08 monitored the storms, which held potential for tornados and
| dropped golfball-sized hail to our west and southwest.
|
| If you missed March's Hands-On Hamming, you missed a great time building antennas!
| Mitch presented a slide show detailing how to assemble the "Tape Measure Yagi's" and
| then we all went to work. Several of the more experienced "Elmers" showed how to
| perform "tinning" operations, held pieces in place during soldering and generally
| helped the process along. I'm looking forward to another HOH "Construction Project".
|
| AARC Officers and ATV will meet at Burger Tex at 5420 Airport for the March 21
| meeting. We are looking for a backup meeting location and Burger Tex was
| suggested as a decent option.
|
| Lori KM5MQ suggests this as a good site to bookmark- www.ham-shack.com.
| It will yield lots of good info, humor and history of Amateur Radio.
|
| If you like SwapNet Newsletter, the club repeaters, loaner hardware and other
| things AARC is up to, please join us and get involved!!
| www.austinhams.org/join.htm You may print out a .pdf and mail it in or use PayPal.

|
| Capitol 10K Footrace is coming up Apr 2! There are only 5 spots left to
claim.
| Lots of new Hams and new faces have signed up, Welcome to the family!
| On Sunday Apr 2, (again this year, the -same weekend- as the time
change) we meet
| ~6:30AM behind the Taco Cabana at Riverside & Lamar for T-shirts, final
instructions
| and volunteer packets.
| 146.94(-) will be the Race Net, 147.360(+)131.8PL will be used for Medical
(MSET) net.
| There is always a great after-event party for the vols at ZAX Pints and
Plates
| (312 Barton Springs Rd).
| You will need a handheld with a gain antenna and extra batteries or a
portable station.
| Hams need to be in place -well- before 8AM and generally place themselves
close to their
| assigned spot where a good view up and down the course can be obtained.
We observe
| the race course, relay "first runner" reports, and keep track of the
participants' wellbeing.
| To volunteer, contact Jeff N5MNW@... or call 255-6753.
|
| Mar 21 AARC Officer's Meeting 3rd Tue 6PM- Burger Tex on Airport
| Officers check out Burger Tex on Airport for backup meeting location.
|
| Mar 28 (4th Tue) TCARES General mtg- 7PM ARL 10,000 Burnet Rd
www.TCARES.org
| Topic- TBA
|
| Apr 4 AARC Biz meeting 1st Tue 7PM- Mangia's at Burnet/Gracy Farms
| Come join us for dinner at ~6PM and be ready for the biz meeting at 7PM
| Topic- TBA
|
| Apr 11 "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
| (Pizza $1/slice drinks 50c or bring your own snack)
| Topic- TBA
|
| www.AustinHams.org site has a nomination button for "Ham of the Month".
| Nominate and describe who -YOU- think ought to be AARC's next HOM.
|
| AARC dues can now be paid online! It's now easier than ever to renew
and/or
| join the AARC! www.austinhams.org/ppdues.htm
|
| If you're not an ARRL member, AARC will apply $15 towards your AARC club
dues
| if you sign up for first-time ARRL membership through the club!
| Take advantage of dual signup, save money, join ARRL and AARC

simultaneously!
| Contact Jeff N5MNW@... or Jerry N5UJ@... for more details.
|
| Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop
by the store,
| tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet
newsletter.
| It might not help, but it couldn't hurt!

2163. MIXW set up

Yahoo group: Temple_ARC
Date: 2006-03-21 03:45:22 UTC
From: Glenn Blum
Topic: 2163 Message: 2163

Charlie (n5td),
I downloaded MIXW today. I did get my soundcard interface fixed. Broken solder joint. Mixw is pretty extensive set up and I need to know a few tricks. Can you help?

Thanks,
Glenn

Reply on Status of TEMKA and GATKA: Both are fully operational

Note: TPLKA digi is no longer on-the-air.

Area Packet Mailbox: TBOX (with callsign N5TD) is still functional.

Baud: At this time there is not a 9600 baud digi available.

73,
Charlie, N5TD

From: ka2emt_randy
Topic: 2167 Message: 2167

Does anyone in the group use Echolink with Sprint DSL? I've set it up on my PC without a radio and interface, but I can't connect to other users, I keep timing out.

2168. Packet Digi 145.59 Status

Yahoo group: Temple_ARC
Date: 2006-03-22 18:20:33 UTC
From: Charlie Schlieper
Topic: 2168 Message: 2168

Status of TEMKA and GATKA: Both are fully operational
Frequency: 145.59 MHz FM
(TEMKA is located in Temple) --callsign NU5D-3
(GATKA is located in Gatesville) --callsign NU5D

An Area Packet Mailbox is still maintained, TBOX --- (callsign N5TD)
which maintains current Satellite Keps, W1AW bulletins, and
information notes on other amateur radio related items.

Note: At this time, TPLKA digi is not operational.

Baud: At this time, these digis are not capable of relaying 9600 baud packets.

You are cordially invited to use these packet digis at any time.

73,
Charlie, N5TD

2174. Ham Expo VE testing

Yahoo group: Temple_ARC
Date: 2006-03-28 22:38:57 UTC
From: Mesecke
Topic: 2038 Message: 2174

Steve,

I was told that you were the VE coordinator for Expo in the past and that
you have all the paperwork with you. Are you still willing to be head honcho?

We are still in need of finding an alternate site for testing since the Expo center
messed up and the room on the second floor is not available. I checked with the
VFW post next to the Expo center and they have a chili cook off that day so their
hall is out. And just up the highway Prince of Peace Lutheran church is also out
because they are having some kind of work group training.

I was hoping for something as close as possible because of logistics. Any suggestions
or ideas would be greatly appreciated. Since I'm not a VE I am looking for guidance
as to what kind of place would be adequate. We have to decide on something quickly.

From: Paul Finch
Topic: 2038 Message: 2176

Hello,

Anyone out there interested in going to Dayton? I am thinking about loading up my 4 door long wheelbase pickup and my 7' X 14' enclosed trailer and heading that way to sell some "stuff". I have lots of room for other stuff. I have room for up to five people in the truck, 4 would be the most comfortable but the more the merrier and cheaper.

I am in Azle, Texas just Northwest of Fort Worth. If interested email me back and lets discuss it. It will be hard to find a Hotel/Motel room close but with the truck that is not a problem.

2181. Cocorahs; the growing rain/snow/hail mesonet

Yahoo group: Temple_ARC
Date: 2006-04-01 19:13:27 UTC
From: David
Topic: 2181 Message: 2181

I wanted your group to be aware of the COCORAHS network, which is a rainfall/hail/snowfall mesonet expanding across the country, and is being used to verify severe weather warnings across the Plains and beginning to be used to verify precipitation forecasts across the country and has been used to document local flood events, hence the interest from someone at HPC. The network began in Colorado after the 1997 floods near Fort Collins, CO and has been expanding east and south ever since. COCORAHS expanded to Texas a year or two ago, but for some reason participation within Texas has been very limited...there are currently only 44 observers within the Lone State State in the mesonet when compared to 150 in Maryland,which gives you the magnitude of the underrepresentation of Texas.

This group's inclusion could be very beneficial to the NWS mission both locally and nationally. At HPC, we have been beginning to include these measurements within our storm summaries, when appropriate, and plan to include them within our tropical cyclone public advisories during hurricane season after our normal take-over from NHC when a tropical cyclone moves inland and weakens to a tropical depression. Hence our interest in Texas on that point, since it appears Texas is entering its hurricane-rich period (which lasts about a decade) as of 2003-2005.

The COCORAHS website is http://cocorahs.org, which will give you more information about the program, and if any of you all would like to become members and/or county coordinators in the program that are currently not represented. I'm a member of cocorahs myself in Maryland, station MD-MG-1, and HPC is station MD-PG-2.

If you have any questions about HPC and its national responsibilities or cocorahs, feel free to ask. Like everyone else in the National Weather Service, I'm here to serve you as much as possible.

Sincerely,

David Roth
Forecaster
HPC in Camp Springs, MD

2182. CDT Time w/Sat Pgms

Yahoo group: Temple_ARC
Date: 2006-04-03 02:12:08 UTC
From: Charlie Schlieper
Topic: 2182 Message: 2182

A CDT Reminder Note for Satellite tracking programs:

Some satellite tracking programs automatically correct for Daylight Savings Time, while others do not.

InstanTrack 1.55
Automatically corrects for time changes.

TrakSat 409
Automatically corrects for time changes.

Orbitron
Automatically corrects for time changes.

STSPLUS 123
From the main menu screen, hit F8, then F10. ENTER on the default UTC Offset < -6.00 > (that is NOT where you change it to Daylight time), then enter a 1 to set the Daylight Flag, and ENTER. Select a Zero for UTC, or a 1 for Local computer time, depending on which one you use. Type a small y for YES, and ENTER. Close out the program and restart to refresh the change.

LOGSAT Pro 5.2
You must edit the LogSat.ini file. This is one easy way to do it. Open the program, left click on UTILITY at the top. Drop down to Modify LOGSAT.INI and left click on it. On the first screen shown, you should see "DayLiteSavings=FALSE" if it is setup for CST time. Highlight the FALSE part, and change it to read TRUE. Save and Exit. (If you Exit first, the program will prompt you to SAVE the changes, say YES) Close out the program and restart to reflect the change.

SB QST ARL ARLB006
ARLB006 W1AW 2006 Spring/Summer Operating Schedule

Morning Schedule:

Time Mode Days
------------------- ---- ---------
1300 UTC (9 AM ET) CWs Wed, Fri
1300 UTC (9 AM ET) CWf Tue, Thu

Daily Visitor Operating Hours:

1400 UTC to 1600 UTC - (10 AM to 12 PM ET)
1700 UTC to 1945 UTC - (1 PM to 3:45 PM ET)

(Station closed 1600 to 1700 UTC (12 PM to 1 PM ET))

Afternoon/Evening Schedule:

2000 UTC (4 PM ET) CWf Mon, Wed, Fri
2000 " " CWs Tue, Thu
2100 " (5 PM ET) CWb Daily
2200 " (6 PM ET) RTTY Daily
2300 " (7 PM ET) CWs Mon, Wed, Fri
2300 " " CWf Tue, Thu
0000 " (8 PM ET) CWb Daily
0100 " (9 PM ET) RTTY Daily
0145 " (9:45 PM ET) VOICE Daily
0200 " (10 PM ET) CWf Mon, Wed, Fri

0200 " " CWs Tue, Thu
0300 " (11 PM ET) CWb Daily

Frequencies (MHz)

CW: 1.8175 3.5815 7.0475 14.0475 18.0975 21.0675 28.0675 147.555
RTTY: - 3.625 7.095 14.095 18.1025 21.095 28.095 147.555
VOICE: 1.855 3.990 7.290 14.290 18.160 21.390 28.590 147.555

Notes:

CWs = Morse Code practice (slow) = 5, 7.5, 10, 13 and 15 WPM
CWf = Morse Code practice (fast) = 35, 30, 25, 20, 15, 13 and 10 WPM
CWb = Morse Code Bulletins = 18 WPM

CW frequencies include code practices, Qualifying Runs and CW
bulletins.

RTTY = Teleprinter Bulletins = BAUDOT (45.45 baud) and AMTOR-FEC
(100 Baud). ASCII (110 Baud) is sent only as time allows.

Code practice texts are from QST, and the source of each practice is
given at the beginning of each practice and at the beginning of
alternate speeds.

On Tuesdays and Fridays at 2230 UTC (6:30 PM ET), Keplerian Elements
for active amateur satellites are sent on the regular teleprinter
frequencies.

A DX bulletin replaces or is added to the regular bulletins between
0000 UTC (8 PM ET) Thursdays and 0000 UTC (8 PM ET) Fridays.

In a communications emergency, monitor W1AW for special bulletins as
follows: Voice on the hour, Teleprinter at 15 minutes past the hour,
and CW on the half hour.

FCC licensed amateurs may operate the station from 1400 UTC to 1600
UTC (10 AM to 12 PM ET), and then from 1700 UTC to 1945 UTC (1 PM to
3:45 PM ET) Monday through Friday. Be sure to bring your current
FCC amateur license or a photocopy.

The complete W1AW Operating Schedule may be found on page 96 in the
March 2006 issue of QST or on the web at,
http://www.arrl.org/w1aw.html .

2189. NEW MEXICO FUNDS EMERGENCY COMMUNICATION NETWORK

Yahoo group: Temple_ARC
Date: 2006-04-06 02:43:07 UTC
From: Gerald L. Richmond
Topic: 2189 Message: 2189

Already working to see what I can get the state of Texas to do with and for the Enhancements of our systems across our vast state.

Williamson County, TN spent nearly 35K to cover there county from all side with Two VHF and 2 UHF repeaters that can all be linked together or cross linked and so forth.

Funds WELL Spent!

Gerald - N5ZXJ

NEW MEXICO FUNDS EMERGENCY COMMUNICATION NETWORK

New Mexico has allocated $500,000 to design, construct and install a statewide Amateur Radio emergency communication network. Rep Tom Anderson (R-Bernalillo), KB5YSG, sponsored the funding bill in the 2006 New Mexico legislative session.

"After hurricane Katrina, we've seen firsthand just how valuable Amateur Radio can be in a disaster," Anderson said. "The Gulf Coast hurricanes destroyed communications infrastructure and overwhelmed government resources. It was Amateur Radio operators who helped to save the day."

The state Department of Public Safety will pay for the equipment for Amateur Radio volunteers to use in disasters and emergencies. All of the equipment will be state-owned. Early plans call for the installation of strategically located, interlinked VHF and UHF repeaters to handle both voice and digital communication.

In New Mexico, the potential exists for disastrous wildfires, tornadoes and floods. This year, when range fires broke out near Hobbs, Amateur Radio Emergency Service (ARES) volunteers provided communication support. Over the past several years, radio amateurs in New Mexico have been called upon to support communication during fires, for severe weather spotting (SKYWARN), during public service events and to assist Albuquerque with Hurricane Katrina refugees.

2192. Website membership roster update

Yahoo group: Temple_ARC
Date: 2006-04-08 03:00:34 UTC
From: john_ke5c
Topic: 2192 Message: 2192

The membership update supplied by the treasurer today (4/7/2006) has
been applied to the online roster:

http://www.tarc.org/club_roster.php
<http://www.tarc.org/club_roster.php>

If you have paid your 2006 dues (or are a life member), and your name
is not on the roster, please notify me.

73, john

2193. Air Show - last call for signup

Yahoo group: Temple_ARC
Date: 2006-04-08 03:22:00 UTC
From: Darwin
Topic: 2182 Message: 2193

I need to turn in the volunteer list by this Sunday, so if you have not contacted me and want to work the airshow let me know ASAP. I have openings on Sat afternoon (May 6) and Sunday afternoon (May 7).

As before, we have no communications duties associated with the show, those are conducted on the commercial frequencies. Our role is limited to passing out and collecting commercial radios and changing batteries as required. So look on this mainly as an opportunity to help out with the show and get a free pass if you want to see the planes. Volunteers get a pass to all three days even if they work only one.

The folks I have on the list so far are;

Ken Baker
Larry Fush
Darwin Geiselbrecht
Oscar Houser
Anjanette Mesecke
Tom Olsen
Don Perry
Richard Prewitt
Gerald Richmond
Ron Thompson

We probably have enough to cover it if we do some double shifts, but if want to help, we can still use the help on Sat and Sun afternoon. Let me know ASAP before Sunday morning as I have to get the list in order and turn it in by 1PM on Sunday.

Let me know ASAP. 73 - Darwin

2196. WSJT 5.9.4 - April 11, 2006

Yahoo group: Temple_ARC
Date: 2006-04-12 04:24:43 UTC
From: Charlie Schlieper
Topic: 2196 Message: 2196

Ham Radio software UPDATE:

WSJT Meteor Scatter Version 5.9.4 was released April 11, 2006.

Download at: http://pulsar.princeton.edu/~joe/K1JT/WSJT594.EXE
Summarized Changes in WSJT 5.9.4, released April 11, 2006. (Info Courtesy K1JT)

1. Some problems exhibited on some computers with dual CPUs ("hyperthreading")-- fixed.
2. Problems with reading previously recorded files, and reading sample tutorial files-- fixed.
3. Bad data causing an error message involving the KV decoder-- fixed.
4. The delay times involving PTT, start of Tx Audio, end of Tx Audio and release of PTT, were increased by 0.2 s. Also a bug in the T/R timing logic was fixed.
5. There was a minor bug in computing the position of the moon. It is now fixed.
6. A minor bug when displaying large negative Doppler shifts in the file azel.dat fixed.
7. The WSJT program is now capable of transmitting "test files" with arbitrary audio content.
NOTE: If you have a computer with multiple CPUs or a CPU with hyperthreading, and WSJT 5.9.4 does not run properly, please reboot your machine, enter the BIOS Setup screen, disable your hyperthreading, and then see if WSJT then runs properly. You should not notice any appreciable degradation (if any) in performance by leaving your hyperthreading turned off. For now, this is the recommended procedure of running WSJT if you have problems with it turned on.

ENJOY HAM RADIO!

2197. Ham Radio Programming Ckts

Yahoo group: Temple_ARC

From: Charlie Schlieper
Topic: 2197 Message: 2197

On page 3 of the April 2006 TARC bulletin, there were two URLs given for programming circuits. They're both good URLs, but you may get lost on the first one without this short add-on. As a repeat reference for these easy-to-build programming circuits, here again is a repeat of the two URLs.

1. http://www.cqham.ru/ftprog.htm

2. http://www.radioam.net/sq9jdo/Kenwood/Modyfikacje/mod2.html#2592

NOTE: I added the "ftprog.htm" to the first one to help.

Charlie, N5TD

2198. 2M SSB Actvity

Yahoo group: Temple_ARC
Date: 2006-04-13 11:36:51 UTC
From: Steve Bosshard
Topic: 2198 Message: 2198

Following is an email I sent out tonight to a few email lists, to help get / keep the 2m SSB ball rolling!
If you're on one of those lists, sorry for the dupe!

Please delete this header and then pass it on to others (Individuals and/or/ Lists) that may be interested in 2m SSB

72 Ben - ne5B EL19pu

Subject: 2m SSB Activity - Thursday Nights 9pm on 144.250

You may already know about the 2m SSB activity on Thursday nights, if not - please read on!

What: 2m USB
When: Thursday Nights 9pm until ????
Where: Texas on 144.250

I'm not sure how many hams are getting on the air each Thursday night, but I've worked at least 3 dozen different callsigns in various gridsquares during this event. There's some excitement going on, as we have over 50 signed up on the Yahoo Group Email list in just 3 months!

Note: This is not a net, so don't expect to find a net control. It is simply an operating time / suggested frequency to get as many people on the air at one time to make some contacts! Feel free to QSY up and down the band and rag chew, find out what others are using, exchange email addresses etc.

With ~50watts using my minimal antenna setup (2m Folded Dipole and Vertical 2m/440 antenna), I've worked stations as far east as Baytown - as far west as Hondo, as far north as Gatesville and as far south as Corpus Christi.

Many are using Vertical Antennas, so not having a horizontal antenna is not a valid excuse!!!

This has been taking place since mid January. It has promoted some hams to add horizontal Antennas to their arsenal, while others have dusted off old unused 2m allmode rigs, or put their HF/VHF allmode rigs into a new configuration (2m USB!) and put them to use with Vertical Antennas.

Check out http://texasvhf.org or http://groups.yahoo.com/group/texasvhf for more info.

Information on a formal 2m club with net activity in North and East Texas can be found at http://www.swotrc.net

I hope to work you on 2m SSB ! ! !

73 Ben - ne5B El19pu (near La Grange)

Please pass this on to others that may be interested!!!

2199. TARC Spring 2006 Ham Class

Yahoo group: Temple_ARC
Date: 2006-04-13 20:58:37 UTC
From: Charlie Schlieper
Topic: 2199 Message: 2199

The TARC Spring 2006 Ham Radio Class ended this week with 12 students finishing their study for a TECHNICIAN CLASS license.

The majority of students were even passing their first SAMPLE TEST given.

The ONLY question I was not able to answer at the end, was--- "Where exactly do we go to be tested?"
Assuming TARC is still planning to have a VE TEST SESSION on April 22, 2006, at Spring Ham Expo, I gave each of them a current copy of the TARC Bulletin, with all of the TARC OFFICER's phone numbers listed, to call.

The class ended on Tuesday, April 11th, on a very positive note. We should have some fine new TECHNICIAN Class hams soon. Please make them feel welcome.

My personal THANKS to Darwin, K5DOA, for his assistance during this class.

--- Charlie

I have arranged for the TSGARC (Texas State Guard ARC) To handle the VEC session at Ham Expo.

I also advised the members of Temple Cert that a session will be held at either the EXPO center of at the County EOC Training room.

It was also noted that there maybe a number of walk-ins also that want to test.

In the future, you (as an experienced VE examiner) could offer a VE technician only test session as the last day of class. You don't have to offer a full range of test elements, just what is necessary for tech. The public notice requirement can easily be met by a posting on the reflector and/or in the TARC bulletin. I'd be willing to help at such a session. Gerald recently upgraded to general and seems interested in VE testing, so he has plenty of time to acquire an ARRL VE certification prior to the next class and could be the third team member. One of the main reasons folks don't pass is that they choke due to nervousness. Being tested by someone they knew in a familiar setting would lessen than happening. Thanks for your work with many past and future TARC sponsored classes as well. I hope all of the graduates will join TARC. 73, John

2209. (no subject)

Yahoo group: Temple_ARC
Date: 2006-04-16 18:29:50 UTC
From: Jim Miller WB5OXQ
Topic: 2209 Message: 2209

The BCARC failure to allow the RED CROSS or any other similar agency use of their repeater for any emergency tests at any time unless a member of the club runs the test or net has caused me to write this letter. I do not wish to put the blame on any individual but hope the club will change its opinion on this kind of activity. I sincerely hope the board of directors will see the light before Bosque county needs other hams help someday.
This is not the first time the BCARC has refused to cooperate with another agency regarding temporary use of the 147.180 repeater. I proudly built and secured tower space for and maintained this repeater for several years even though I live over 30 miles from the tower. It was always my hope that this repeater would fill a gap in this area not covered by any other machine and bring together hams that might otherwise not have enjoyed their hobby as much. I feel the BCARC may not have existed if not for my efforts to see it created and to survive. I have spent a lot of monies out of my pocket and taken non paid days off of work in the past to work on or supervise tower jobs and gladly did so. I resigned my trusteeship when the club refused to allow the HOTARC club to use the repeater, not close it, for 5 minutes in a daytime hour when activity is low for one of the McLennan county emergency tests. The president felt it ok as did I but the board rejected it so I felt I had no other option than to resign since I had no control over the repeater any longer. Now, once again it seems that the BCARC is not willing to co-operate with other agencies in any emergency drills or tests. Amateur frequencies are free to use by anyone with a license to do so and repeaters that are open are supposed to be the same. If you wish to limit the repeater to only members of the club then say so in the listings of the club in repeater directories, not say it is open but certain people cannot use it. I just do not and never will agree with such a policy. Having such a policy leaves bad feelings with fellow hams in other areas who you might need someday. Therefore I feel I have no option but to request my and my wife's membership which was given as a lifetime gift be recended and I am removing the repeater frequency from memory in all my radios. I will send portions of this email to the mailing list removing any names so reference to any individual will be made. Thanks for the past enjoyable years and friends I made in Bosque county. Sincerely, Jim and Ella Miller, WB5OXQ and KA5EPM.

2210. 70cm antenna question

Yahoo group: Temple_ARC
Date: 2006-04-17 04:43:48 UTC
From: Jim Miller WB5OXQ
Topic: 2210 Message: 2210

I am considering adding a 70cm ssb yagi to my tower. I have a force 12 c3 tribander at 52' and a 10 element dual polarity 2 meter beam at 62' Can I fit a 70cm yagi between these without messing up the performance of the other beams? If so what is a real good 70cm (432)yagi? I am not worried about the extra weight, 70cm antennas are pretty small and light.

This is not the first time that this has happened with BCARC. As I'm sure you are aware, one or two storm spotter groups wanted to work with BCARC but was met with the same result. There have been other incidents (unrelated) that have arisen from time to time, again with the same result.

All I can say is that I don't blame you, Jim. I will remember your post for future reference.

2214. Ham Expo

Yahoo group: Temple_ARC
Date: 2006-04-18 18:53:23 UTC
From: Myron Mesecke
Topic: 841 Message: 2214

Hi everyone,

If you haven't yet decided to help at Expo I'm here to ask you to think again. Your help is greatly needed. Even just one hour can allow someone who has been working for several hours to have a break and find time to check out the event.

VE testing will be at the Bell county EOC. I plan to have maps and signs at the TARC tables. Anyone who is W5YI certified can help the Texas State Guard ARC give the exams. A couple of people would be nice to have at the EOC to help people find the exam rooms.

We have been asked to try to get the RV's and travel trailers to park on the grass lot. There are about five events at the Expo center on Saturday so the parking lot will be busy. Try to pass this message on either on the air or on the net.

Thanks.
Myron

> I am considering adding a 70cm ssb yagi to my tower. I have a
force 12 c3 tribander at 52' and a 10 element dual polarity 2 meter
beam at 62' Can I fit a 70cm yagi between these without messing up
the performance of the other beams?

absolutely.

> If so what is a real good 70cm (432)yagi? I am not worried about
the extra weight, 70cm antennas are pretty small and light.

i'm not sure what the current hot antennas are. if you are thinking
about fm, any of them will probably be fine. if you are going for
weak signal (ssb and cw), you might want to shop around, steve,
nu5d, bought some recently with which he was very disappointed with
the poor construction - i think they were hygain, but you should
check with him.

there are some reviews on:

http://www.eham.net/reviews/products/36

the m2 antennas are used by some moonbouncers:

http://www.m2inc.com/products/uhf/70cm/43213wla.html

other m2 70 cm antennas:

http://www.m2inc.com/products/70cm.html

Fortunately, I was able to sit back, and wait for the storms many of you were out in. The "Net" sounded good from here. The information gave me a "Heads Up" as to what to expect over here in the East. I also appreciate the services of each of you, and the NWS in Ft. Worth. You folks did a Great job! Thank you.

Hello Paul,

The VE TEST FEE is still the standard $14.00, and the TEST will
be given tomorrow, Saturday, April 22, 2006, around 1-PM. The location
is slightly different from being at the Belton Expo Center this time. It will be
held at the Bell County Communications Center, which is North of the Expo
Center a short distance. If you need more detailed directions, I'm sure you
can receive directions here, or easily be talked in on the 146.82 (tone 123)
repeater. Good luck to Karen!

73,
Charlie, N5TD

Subject: TARC request for information

Contact_FullName ===> Ron Forrester

Comments ===> Just a line to thank you for putting on yet another fantastic job on ur April 22, 2006 event. I was only a tailgater. Had some boatanchor power supplies I was anxious to get rid of, along with some other stuff out of the old junkbox. Got up there Friday the 21st around noon. Parked in the lot, got out, opened the side door to my van, and before I could get my hatch open in back, and set up my table, all three power supplies were sold!!!See ya in October with some more stuff I have accumulated over the years that are just gathering dust, or are no longer needed in my shack. Thanks for a wonderful job, and a very good time had.

Subject: [FISTS-Updates] Geo, G3ZQS, Silent Key

It is so difficult type "G3ZQS" and "Silent Key" in the same sentence. But I just heard from Geo's son that Geo became a Silent Key at 7, UK time. As I had written to you yesterday, Geo had a heart attack last Saturday and had been in and out of consciousness all week.

Geo's passing leaves a big hole in the Morse world, but he left us with the wonderful legacy of FISTS. He created FISTS to keep friendship, good operating practices and encouragement of newcomers foremost in people's minds "whilst" they are on the air. I know you join me in re-committing to this FISTS philosophy and making FISTS even stronger, in remembrance of Geo's vision.

2227. Communications Drill

Yahoo group: Temple_ARC
Date: 2006-04-26 15:19:48 UTC
From: Carolyn Black
Topic: 2227 Message: 2227

Date: 26 April 2006

Time: 7:30PM

Net: W5TSG, Texas State Guard ARC

On 26 April we will attempt to connect hams from all over the American Red Cross Waco hub. We will begin the W5TSG net on the simplex freq. of 147.550 and then proceed to 4 other area repeaters as follows:

7:30pm 147.550 simplex

8:00pm 147.320 tone + 123

8:30pm 147.240 tone + 123

8:45 p.m. 145.150 tone +123

9:00 pm 147.140 tone + 123

The entire mission is to be able to coordinate emergency communications for the Red Cross and other disaster agencies within the immediate Central Texas area. We are beginning with the mission of the Red Cross, Waco Hub control area.

Phase I is to make contact and phase II is as follows:

· Connect by radio all Red Cross shelter management areas within the Waco hub

· Determine contacts in each of the shelter areas

· Determine the GPS coordinates for the shelter areas

· Contact ham base stations covering the shelters

· Man power available for emergency communications in each of these areas

· Determine local logistics such as

a. vehicle access

b. rail access

c. bus access

d. access by air

e. availability for lodging and food

f. availability for fuel, regular and diesel

g. availability of internet, telephone and local amateur radio

h. availability of emergency facilities such as clinics, hospitals etc.

We ask that you check in and relay on the simplex frequency so we can include as many stations as possible in the designated area. When we begin to use the repeaters we ask that you check in on as many as you can hear. We will operate the total net as long as it takes to obtain full participation.

When you check in, give your call sign, name and location. It will not be necessary to make any comments. This will expedite the operation and allow more participation.

During this communications test a net controller will be monitoring each frequency during the entire operation. Those areas outside the footprint of the designated repeaters are requested to contact K5zzm with repeater availability data prior to 26 April.

This net should not only assist the Red Cross but also other disaster units as well as the ARES groups throughout the area.

If you have any questions, please call me at 254-755-8116 or toll free 1-888-204-9909.

Eric/KD5TAT asked me to put a little message together to put the information out about the Coffee.

Heyeeee!!! we are going to do it again.

Hello guys, this is a first and I enjoyed it very much at the Kettle in Copperas Cove. We will do it again with more folks Saturday 29th of April at Henderson's Restaurant 415 E Ave A, Killeen ,TX. 8:00 AM hrs till, (Dutch). The first event last time lasted about an hour and a half. Feel free to bring who ever you want. Hams , if you would wear a name tag with call-sign or Cap with same(makes it a lot easier at out first meeting).
I had a blast at Belton Expo, 22 April. I hope all made it. I really enjoyed myself. I sure want to thank all the folks that helped with that event. They did a great job.

See you Saturday ,

2232. Push-up pole/ Price sources

Yahoo group: Temple_ARC
Date: 2006-04-29 15:35:58 UTC
From: n5pmk_randy
Topic: 2232 Message: 2232

Greetings fellow hamsters, I encurred extensive weather damage at my house last thursday. Seems a small twister, possibly a tornado paid a visit to my neighborhood. There are two houses completely destroyed. Anyway, my damage was less significant. My biggest loss was my meager antenna system which consisted of a push-up pole holding my fan dipole. My insurance company says I need to send prices and sources of all damaged items I'm claiming, but I can't find a source for push-up poles. I'm wondering if anyone on the site would know of any sources. Thanks in advance for any help on this,

N5PMK/ Randy

2233. Airshow Schedule and Meeting

Yahoo group: Temple_ARC
Date: 2006-04-30 03:07:34 UTC
From: Darwin
Topic: 2182 Message: 2233

Below is the "final" schedule for the airshow based on the responses I received. If your name is on list and you would like to pick up your 3 day pass tomorrow (Sunday April 30) at 2PM at the airport, you may do so. However, it is not necessary. They will have you on a volunteer list at the show and you make pick up your pass and tee shirt voucher on any day of the show. That is, you may pick up a pass as early as Friday even if you don't work until Sunday.

The list is final as far as the pass list goes. However, if you have an issue with the time and and want to work out a swap with someone, that will be fine as long as all shifts are covered. Just let me know what you work out.

In some cases I may have put you down for a shift if you indicated that you might make it but weren't sure. That was done to ensure you were on the pass list. If you are not going to make it, just let me know. We can fill in or get by with one person on a shift - depending on the time of day.

I'll bring some printouts of the schedule to the meeting next week along with any last minute information gained from from John Gantt (the airshow director) on Thursday. 73 - Darwin

---
Friday May 5

7-10 Am Darwin and Ken Farris

10AM-1PM Darwin and Larry Fush

1 - 4 PM Darwin and Ron Thompson

4 - 7 PM Darwin and Gerald Richmond

Sat May 6

7 - 10 AM Richard Prewitt and Oscar Houser

10AM - 1 PM Mike Sherrod and Don Perry

1PM - 4PM Ken Baker and Oscar Houser

4pm - 7 PM John Hobson and Garrett Hill

Sun May 7

Yahoo group: Temple_ARC
Date: 2006-05-02 00:10:50 UTC
From: Myron Mesecke
Topic: 2238 Message: 2238

If you worked Ham Expo and did not sign the yellow sign in sheet you need to let me know. if you worked at Expo it would be nice to see you at the club meeting this week. There will be a drawing for those that worked. A Yaesu VX-170 2 meter HT is the prize.
Also there will be a Ham Expo report. Other items are Field Day, the 4th of July parade and a Hands On workshop scheduled for early June.

I Hope to see lots of people at the meeting.

Myron

Subject: [FISTS-Updates] ZUT

I sort of adopted ZUT from Coast GuardRadio Operators of years past. I sign 73/ZUT (CW Forever) at QSO's end. Personally, I think ZUT should be adopted by the FISTS Organization, but that's just my thought.

From http://www.comm-one.org/:

As stated on the banner of the first edition of Comm-One, the new organization was "ZUT RESURRECTED." ZUT was the forerunner of the CGCWOA, and the organization upon which it was built.

ZUT (formally, "Zeta Upsilon Tau") was subtitled the Fraternal Order of Coast Guard CW Operators.

It was founded in 1962 by Radioman Bill Gulledge (ZUT1) and a small group of his fellow radiomen at the long since closed Coast Guard Radio Washington (NMH), geographically located in Alexandria, Virginia. They adopted an unused military Z-signal for its primary name, and in reaction to the increasing use of radio teletype (RATT) over CW, assigned it the meaning of "CW FOREVER."

Over the sines of radiomen George Datz, Bill Gulledge, George Neitz and Ron Harburg, an organizing letter was sent to all Coast Guard ships and stations having RM billets. In under a year the organization grew to over 700 radiomen who requested ZUT membership cards, and were assigned a ZUT number.

ZUT was disestablished in late 1963, but arose again in 1964, continuing to mail out sporadic copies of its official "ZUT-REP" newsletter. But even after the demise of the newsletter in 1967, the tradition of ZUT at least lingered on. Many of the 1100 or so RMs who were issued a numbered "ZUT Card" hung on to them through the years. One member kept his in his wallet (and still does) just so he would have a way to explain to people why he had a ZUT tattoo on his left arm.

Steve NU5D, Please pass on to the Temple Amateur Radio club
a picture for you

1 of 1: K5JLB Alvin Lawrence

Rocky, Geez,

I talked to Alvin just a month or so ago. I knew his brother K5JLC way back, he was an Army recruiter and lived in Pecos, they were twins, I had lost track of Art and when I was at a training meeting for General Electric, I saw this fellow that I knew, but he did not seem to know me. After the meeting, I went over and when I told him I knew him, he said you knew Art, I am Alvin his twin brother. Art had died earlier, but Alvin and I hit it off just like we had known each other all those years.

Art encouraged me to finish getting my ham license when I was having problems with the code. Art knew very little about how radios worked, but loved ham radio and using repeaters. As a recruiter he traveled West Texas and Southern New Mexico. He told me about this super long range repeater on Capitan Mountain in New Mexico operated by Ken Letcher W5YFN. His encouragement and tales of the 146.610 repeater on Capitan were a big push for me to finish my ham license. Now I live 20.1 miles from that same repeater and it can be seen from my bedroom window. Ken W5YFN let me put my 146.980 super repeater on his other repeater site Buck Mountain, about three miles from here and at 10,750 feet MSL with more than 120 miles coverage diameter. I work on both sites and I am up there many times per year, in fact I will be on Capitan Wednesday.

Alvin and I have been talking on 7195 for many years. I visited his home (when he was still married) in Fort Worth/Dallas and we used to meet at Midland Hamfest with the 7195 group many times. It has been a few years since I met with him. I know he was divorced and seemed to live alone these days.

From the photos he had gained a great deal of weight since I last saw him.

When I first meet Alvin, in the late 80's I guess, he still looked younger and still looked like Art did as his twin. Art had a very special place for me due to his encouragement for

me to get my ham ticket. Art had a tube type Motorola 2meter radio that used crystals and he would change crystals from one area to another. I tuned up his rig a few times before I got my ticket and when I got my ticket he had moved to England just before he planned to retire. I never worked Art on ham radio, but I wanted to let him know I had gotten my license. BTW I ran a similar Motorola 2 meter rig when I first got on ham band back then, I used to pull and change crystals every 50 or so miles.

I am lucky and very glad I knew both Alvin K5JLB and Art K5JLC.

If you want, pass this on to the Temple ARC club.

2242. HT Battery Packs Needed

Yahoo group: Temple_ARC
Date: 2006-05-03 18:10:27 UTC
From: Pete Theer
Topic: 2242 Message: 2242

I am in need of some help. I have two Kenwood TR-2600A HT's with dead battery packs that won't take a charge. I recently bought three new NIMH Battery pack insert replacements from Battery Station. One of the packs I have is evidently defective and won't charge the new packs, while the other one is fine. (I can't find the third pack I had)

Although these are not state of the art radios and don't have CTCSS tones (I have a Yaesu FT-50R for that), they do still make excellent scanners and I'd hate to get rid of them.

I have searched and searched but apparently no one sells the complete battery pack for this radio any longer (part number PB25 or PB26).

Does anyone have or know of a source for this battery pack, either complete, new, used or just the empty pack. Does anyone have an old "parts" TR-2500 or TR-2600 HT radio with good or bad pack laying around to dispose of cheap.

If you can help, please contact me OFF-LIST" at WB5RPU at ARRL.NET

Thanks,
Pete

2251. Young Ham Of The Year Award

Yahoo group: Temple_ARC
Date: 2006-05-09 01:16:40 UTC
From: Steve
Topic: 2251 Message: 2251

"We are now some 6 weeks into the nominating period for the 2006 Young Ham of the Year Award, and to date we have not received a single, viable nomination. The only one we have gotten so far was disqualified because the nominee was age 19 and that's over the age limit."

If you know of a young ham worthy of a nomination, please take the time to nominate that young ham.

2252. GR Level 3 "HAM" overlay file

Yahoo group: Temple_ARC
Date: 2006-05-09 20:59:28 UTC
From: Pete & Justine Theer
Topic: 2252 Message: 2252

Many of you use the program GR Level 3 that displays National Weather Service Radar weather maps and Current watches and warnings on your Windows computer screen.

If you haven't yet seen the program, you can go here for more info and to review the software or download a trial version:

http://www.grlevelx.com/grlevel3/

I am thinking about putting together a "Place overlay file showing the location of all hams and repeaters in the Central Texas area to distribute it for hams to load into GR Level 3 to display the location of the local hams on the weather map.

In order to do so, the coordinates of your location must be known and provided to build the file.

I have built a test file with my call and location and been successful in loading it into the program.

Here's the format for my entry:

Place: 31.119, -98.064, WB5RPU

Each entry must be in this format.

Those interested in being included in the final distribution of this file, please send me your call and coordinates of your location in the above format for addition into the overlay file. Also include the call and coorinates of known local repeaters.

Please send this info to me via direct email and NOT TO THE LIST.

After I receive a number of replies, I'll compile the overlay file and provide a link to download it or email it to those who request it.

Thanks.
Pete

2262. Re: WR1TX Portable Operation This Weekend

Yahoo group: Temple_ARC
Date: 2006-05-15 21:03:28 UTC
From: WR1TX
Topic: 2257 Message: 2262

To James (KD5COJ) and all,

Everything went OK. I shut down about 12:30 am CDT Sunday morning when I saw storms rolling in. When they began to roll through, I ran my XYL and son to the restrooms, just a quarter-mile away. When we got back, I slipped and badly sprained my right ankle. Nothing broken fortunately, but it sure does hurt like heck!

As the storms finished, we got a strong downburst from across the lake with winds maybe 60-70 mph by my estimation. The winds almost took down our tent, but we survived it all OK. I've been through winds like that before, but not inside of a tent; it was an experience to remember.

As for the QSOs, I had around 15-20 of them using both CW and SSB. With an antenna pointing mostly to the south due to some location restraints, that was pretty good! 40 and 20 were used mostly, and I had some great contacts...especially with a group of campers on an island just off the coast of Nova Scotia!

I plan to operate portable again in the future; I just don't know when I'm going to do it. I'll keep everyone posted as to when I try it again. For those who I made contact with over the weekend, thanks! I had a great time.

Hey Warren; Let me know how it turned out. I am working the Armed Forces Amateur Radio Cross Band test. So far I have worked Fort Huachuca, Great Lakes Naval Station, NAV-4 and WUG 231. Tomorrow if conditions improve, I hope to work WAR, and AIR. Band and propagation have made getting contacts difficult.

2266. Re: [Temple_ARC] Re: WR1TX Portable Operation This Weekend

Yahoo group: Temple_ARC
Date: 2006-05-16 05:44:42 UTC
From: WR1TX
Topic: 2257 Message: 2266

Happy to share the experiences, Tom. I learned some things from the trip, especially when it comes to antennas where it comes to height, orientation, and even the type of dipole used.

The dipole that I used was only 8 feet high but was placed in an area that I knew no one would touch it except for some pesky bugs; that made the dipole a nice little BugZapper! But I learned more than that: The dipole would have been more effective as a sloper, and would have worked better going north. The antenna was in a north-south plane, but most of the wire used went on the south leg. I could hear well enough, but a little more height and better orientation would have helped...along with more space at my campsite! Lack of space certainly was a mitigating factor.

On SSB, I couldn't get into KP2 on 20 and 40 (giant pileups didn't help) or ZL (a ZL4 checked into the 3905 CC Late Net on 40 meters), but I could hear them well enough. The VE1 I worked on the island off Nova Scotia was a nice surprise, though. On CW at around 10 wpm I had a bit better luck getting into the Upper Midwest; even though I could hear stations at 599, I got reports of 459 and the like. That's OK, for I was heard well enough to carry on a conversation or two. But overall the East Coast was fairly easy to get into, while the Midwest was difficult. Case in point: I heard a QRP station out of South Dakota, but he couldn't hear me at all. Antenna characteristics and capabilities are important; do not take them lightly!

All of that being said, the dipole I used was certainly a compromise. But my experiment proved a point to myself and I hope it shows others this: You can get on the air on HF no matter what, even if it means doing so with limited means and space. I got nearly 20 QSOs, which I will gladly take. I do plan to operate more in a portable setting in the future, and plan to use what I have learned to make my portable station the best that I can make it. I'll share whatever I learn in the future.

TTYL...

I hope your leg is still getting your around!
Except for the winds, sounds like you had a great weekend. Might just give it a try myself one weekend. I have a small 50watt TenTec Scout that would be easy to setup with a dipole and would just need something to power it up with

Thanks for sharing your experiences.
Tom

WR1TX <wr1tx@...> wrote:
To James (KD5COJ) and all,

Everything went OK. I shut down about 12:30 am CDT Sunday morning when I saw storms rolling in. When they began to roll through, I ran my XYL and son to the restrooms, just a quarter-mile away. When we got back, I slipped and badly sprained my right ankle. Nothing broken fortunately, but it sure does hurt like heck!

As the storms finished, we got a strong downburst from across the lake with winds maybe 60-70 mph by my estimation. The winds almost took down our tent, but we survived it all OK. I've been through winds like that before, but not inside of a tent; it was an experience to remember.

As for the QSOs, I had around 15-20 of them using both CW and SSB. With an antenna pointing mostly to the south due to some location restraints, that was pretty good! 40 and 20 were used mostly, and I had some great contacts...especially with a group of campers on an island just off the coast of Nova Scotia!

I plan to operate portable again in the future; I just don't know when I'm going to do it. I'll keep everyone posted as to when I try it again. For those who I made contact with over the weekend, thanks! I had a great time.

Hey Warren; Let me know how it turned out. I am working the Armed Forces Amateur Radio Cross Band test. So far I have worked Fort Huachuca, Great Lakes Naval Station, NAV-4 and WUG 231. Tomorrow if conditions improve, I hope to work WAR, and AIR. Band and propagation have made getting contacts difficult.

2268. Word of caution for those of us who like tall towers. Ham dies in accident.

Yahoo group: Temple_ARC
Date: 2006-05-17 20:24:20 UTC
From: G
Topic: 2268 Message: 2268

Word of caution for those of us who like tall towers.

Forwarded by friends that knew W7IX--SK-- More Info regarding his accident.

I obtained the following in a telephone conversation with K6SOJ whose property borders the site where W7IX was killed.
Dave was present when Ray Balch SK, the former owner, built his contest/DX station. Dave also responded to the site shortly after the accident and has since spoken to the property owner who was there at the time. The property is now owned by a California Highway Patrol officer and it was from him that W7IX had arrainged to buy the antenna he was removing at the time of the accident.

The tower (per info given to me and based upon my recollection having visited there when Ray was still alive)was Rohn 45, nearly 200 ft tall and guyed at 4 levels. The objective was to remove a long boom 4 element 40 meter monobander from the top of the tower. The gameplan was for W7IX (working alone) to loosen the boom clamps and rotate the boom so that the elements were vertical. Then he was going to remove the elements he could reach from the tower and lower them to the ground. Next he was going to rotate the boom clamp tp bring the director and then the reflector close enough to the tower to remove them and lower them to the ground. Finally he would remove the boom and lower it.

Prior to climbing he checked the tension on all of the guys. Each was nearly max on the gauge. He climbed and was at the top.
Somehow as he was loosening the boom clamps and securing the boom to the tower with rope the entire entire antenna got away from him and dropped vertically. When it hit one of the upper level guy wires (remember this is a big and HEAVY antenna)it snapped the guy. With one of the guys now gone the tower folded over at the upper guy point. As the top portion of the tower dropped it struck several of the lower guy points snapping guys which caused all but about 60 feet of the tower to rapidly accordian into the ground with W7IX belted to what had been the top of the tower.

Killed instantly according to the CHP officer-property owner who was there. This almost sounds like a boom to mast clamp failure or too many (or the wrong) U clamps were removed in the process of re-positioning the antenna for removal.

Tragedy no matter what.

Subject: VHF/UHF duplexer for sale

I have for sale a Comet VHF/UHF duplexer that is excess to my needs right now. It has a SO239 connector on the common side, and leads with FL259s on the split sides. One side is HF thru 2 meters, and the other side is 70cm. Great for using a rig with a common 2/70cm jack with separate 2 and 70cm antennas (like a 706MKIIG, FT857, FT100D, FT897), for using the TS2000 or FT847 with a single VHF/UHF antenna, or for using a 2/70cm dualband FM radio with separate VHF and UHF antennas. Handles several hundred watts on each side. I am asking $30.

2277. PSK63F Digital Mode

Yahoo group: Temple_ARC
Date: 2006-05-23 05:44:16 UTC
From: Charlie Schlieper
Topic: 2277 Message: 2277

PSK63F is NOT the same as PSK63, although it sounds
very similar on-the-air. PSK63F is an FEC mode, whereas,
PSK63 isn't. It transmits at 62.5 baud (refered to as 63),
but has a Data Transfer Rate of 31.25 baud. The Forward
Error Correction accounts for the double-speed, double-width
characteristic.

PSK63F allows a typing speed of about 40 to 42 wpm, which
is adequate for most amateur communication needs, and adds
greater accuracy with the FEC.

You might think of PSK63F as PSK31 with FEC added. It is,
none-the-less, transmitted as PSK63 bandwidth. If you come
across PSK63F, you may inadvertently identify it as PSK63,
but it will NOT decode. Some garbled "patterns" may be noted,
such as "O h" repeated (probably CQs), but most of it will remain
garbage.

PSK63F is useful for short haul DX (to 10,000km), and sending
TEXT messages which require improved accuracy. PSK63F works
very nicely on the VHF/UHF bands, and is experimentally used on
145.555 MHz and 445.555 MHz FM simplex in Central Texas.

The HELP files, by Nino Porcino, says it also reduces the effect
of polar doppler instability, and seems to be very tolerant to drift
and inaccurate tuning.

You may find very little PSK63F being used on HF, as it never
really caught on, but it could well be used on 6m, 15m, and 10m,
when those bands are open.

Two ham programs that contain PSK63F are Stream 1.1, and
MultiPSK version 3.91. There are probably others. I do think the
FEC version, indicated by the F suffix, is interesting to learn about.

Enjoy Ham Radio!

2285. FAN COOLING for FIELD DAY

Yahoo group: Temple_ARC
Date: 2006-05-30 14:31:44 UTC
From: Charlie Schlieper
Topic: 2285 Message: 2285

FANS play an important role in Ham Radio, and with Field Day approaching this might be of interest. I recently went out and purchased five new FANS. Two three-speed High-Velocity 21" silver fans, one of which was mounted on one end (wall) of my storage shed. Two smaller 9" fans were mounted on opposite walls of my garage, and the others were placed in my home. But this started me thinking about Field Day.

I have discovered one particular fan that I'm especially impressed with. It has LOW SPEED, MEDIUM SPEED, and HIGH SPEED. And the two lower speeds provides very pleasant sounds. This is a very desirable feature in ham environments. A cheap annoying sounding fan can quickly become a nuisance after a short period of use.

There are a lot of high quality fans out there, but there are also many cheaper ones too! Picking the wrong fan for any given need can be disappointing. One such high-quality fan that that I wanted to mention is this 21-inch High-Velocity fan that carrys the "Lakewood" label. It is NOT a BOX FAN! Honeywell also makes some fine "commercial-grade" fans, and I'm sure there are many others.

One might assume that a FAN would NOT be needed in cases where we routinely have air conditioning in our Ham Shacks, but think again. Having the right kind of FAN could make an important difference during times of emergency power, or even FIELD DAY operations.

I believe Fan COOLING plays an important role in Ham Radio. The use of FANS to cool AMPLIFIERS alone is paramount to their long-term survival.

I use a variety of MUFFIN FANS in my Ham Shack, and both of my MOBILE AMPS have 12-14 Volt DC cooling fans mounted on top of their heatsinks. While FANS can technically change the way overtemp protection sensors work, they none-the-less tend to do a lot more GOOD than BAD.

Enjoy Ham Radio!

2287. Need input on 2 Meter ssb

Yahoo group: Temple_ARC
Date: 2006-05-30 23:25:23 UTC
From: n5pmk_randy
Topic: 2287 Message: 2287

Once again I need to turn to my fellow hams in the community with more knowledge and experience in the hobby than I do for some guidance. I'm really wanting to get a 2 meter all mode rig, but I want it to have tone capability. I only have about $325 to spend , which may be an obstacle. Here is my predicament. I really like the Kenwood TS-711A, but every time I find one on E-bay, the price sky rockets at the last minute. Last night I was watching one and it went from $266 to $381 in the last two minutes. I have found a TS-780 available on another forum for an asking price of $325, shipping included, but I don't know anything about the radio, and it only does 10 watts, is this enough power for ssb work. And ,the final part of the equation, I'm planning to go HAMCOM next week. Do you think it would be more likely I would be able to meet my needs there, or should I go ahead and buy the TS-780? Thanks for any and all input in this issue. I'll also be needing an antenna when I get the radio, so, if anyone has a spare, shoot me a line. Always thankful,

Randy/ N5PMK

2288. Re: Need input on 2 Meter ssb

From: WB5RPU@ARRL.NET
Topic: 2287 Message: 2288

Hi Randy,

Join the "ham4sale" group at Yahoo groups. They often (almost daily) post estate sale items on the there. There were two all-mode 2M Base rigs on there this morning. A Yaesu FT-480R (30W PEP INPUT) for $350 and a Kenwood TS-711E (25W output) for $375. You might find something there from time to time you can afford. I have a Yaesu FT221R, but it doesn't have CTCSS tones and only does repeater offsets on one band segment (146-147). It also only has 10W OUTPUT, but a cheap amplifier will fix that, however. I use it for local SSB and FM simplex only and use my Icom IC-2200H for repeaters with CTCSS tones at 65 watts and my Yeasu FT50R HT with CTCSS tones for low power, 5W.

Good Luck,
Pete

2289. KB5SXV off the air for a few days

Yahoo group: Temple_ARC
Date: 2006-06-01 07:15:25 UTC
From: Pete & Justine Theer
Topic: 2289 Message: 2289

Haorold, KB5SXV wanted me to spread the word that he took down his tower today to rearrange his antennas and will be off the air in all modes except 2M FM for the next few days. He and Charlotte are also planning to return to the Texas panhandle to visit with her dad this weekend. The plans are still tentative.

Thanks,
Pete

2290. Tower Accident

Yahoo group: Temple_ARC
Date: 2006-06-01 09:22:28 UTC
From: Steve Bosshard
Topic: 2290 Message: 2290

Three killed in fall from US television tower

June 01 2006 at 10:39AM

Oakland, Iowa - Three workers fell 330m from a television tower and died, officials said.

Bill Hayes, director for engineering at Iowa Public Television, said the crew was replacing strobe lights Wednesday when the accident happened.

"They were up fairly high when something went wrong and all three members of the crew fell," Hayes said. "We don't know what the actual cause was."

He said a fourth member of the crew was working on the ground, operating a winch, hoisting parts to the crew.

"We can only assume that the safety equipment failed," said Pottawattamie County Sheriff Jeff Danker.

The men - ages 57, 27 and 19 - were pronounced dead at the scene. They worked for Deter Tower Service, of Grimes. Their names weren't immediately released.

A woman answering the phone at Deters said no one was available to talk about the accident. She declined further comment. - Sapa-AP

From: Wm. Teed
Topic: 2296 Message: 2296

Hello Group:
My, questions is Im intrested in running Aprs/TCIP from a computer.
I know that you need to have a valadation number and so on.
The qeustion is where and how do you get it.

Thanks,
Bill W5Wht

How low will we go? Check out Yahoo! Messenger?s low PC-to-Phone call rates.

> I know that you need to have a valadation number and so on.
> The qeustion is where and how do you get it.

when i looked into this a few years and one computer ago (all that i downloaded is gone), i came to the conclusion that you had to pay to get a validation number. i am aware of three aprs clients that run on pc's: winaprs, aprsdos, and uiview. with the first two shareware's, when you register (read "pay for") the shareware, you receive a validation number. with uiview, i think it's free since the developer has died:

http://www.patmedia.net/ralphmilnes/soundcardpacket/7uiview.htm

if you find something else out, please post for the rest of us to know.

Subject: [CTDXCC] Six Meters

I was pleasantly surprised to work EH8BPX on six this morning but I was absolutely astounded to work 15 JAs this evening between 0030 and 0130. According to neighbor K5FP the band was open as early as 2300 and there were still some weak JA signals at 0200 when I went QRT. No "booming" signals but some were as strong as S7.

From: James Kennedy
Topic: 2301 Message: 2303

OK uiview can be use on the internet for aprs use,

here's is how to do it

step 1 start up UIVIEW

step 2 along the menu bar you will see the menu setup click on it

step 3 select APRS server setup

Step 4 Now on the first time you select that you will see a alert just ok it

Step 5 now if the APRS server windows opens up select one or more servers , now this is where you put you Validation number

Step 6 now if you have a TNC and radio hooked up you can select gate RF to the net

step 6 close that window and bring down uiview and restart uiview to make the change effective.

Now with all that done , of course you only have to do it once
now you can bring up uiview and go to Action and select connect to APRS server

good luck if you need any more help e-mail

to W5WRE and TOM

THIS TOWER PROJECT WILL START ABOUT 5PM ON 7 JUNE 2006 AND LAST ABOUT 2 HOURS

no problem it should all be done by 7pm

here are direction to my home

take 190 HWY west to the FM 2657
go south on FM 2657 about 8.7 mile till you see
Cove Ranch RD turn Left

After turning left you travel about 300 feet and go down a hill and at the bottom of the hill you will see a no name road turn left on the no name road, and then proceed about 600 feet and you see a house on the right , Park in the yard anywhere.

you will see the tower, section in concrete

thanks so much hope to see u

Jim
wu5e

Subject: VE Testing and Program

Coming up this weekend!

VE Testing on Sunday at the Speegleville Club House -- this will be the last TECHNICIAN TEST ON THE OLD QUESTION POOL. So if you have been studying up on the current question pool, now is the time to take the test. A new question pool (for TECHNICIAN CLASS ONLY!) will be in place next month, so the test will change. Please let Leon, Mike, or me know (and I'll relay to them) if you are planning on testing Sunday.

Sunday is also clean up day at the club house - preparing for our program night and supper on Monday.

The program this month will relate to field day and our preperations for it - If we are going to give HOTARC a run for the money in points, we'll need lots of good Hams on the radios!

See you there!

Aaron

2316. TR (DOS contest programs) wil outlive Windoze

Yahoo group: Temple_ARC
Date: 2006-06-10 16:21:26 UTC
From: ke5c
Topic: 2316 Message: 2316

This is not news to Linux-aholics, but I've rediscovered how easy it is to breathe new life into old computers with Linux. KD4D accidently got me started with his DOS/Windoze dual boot posts for TR. He uses Linux utilities to do achieve that, and I only thought that was interesting at the time, but it laid the foundation for this. A friend recently gave me his old Dell Desktop with a dead disk. An old hard drive I had in my drawer brought the machine back to life, but (fortunately) I didn't have an available copy of Windoze to install - thank you Microsoft for making your installs only work with one computer! K5TR and NA5TT each gave me three different shades of Linux to consider, and Ubuntu was common to both lists, so that's what I chose. There was some learning to do, and admittedly it helped that I had done some UNIX work in a former life. I also learned just enough about FreeDOS (thanks to all those guys and gals too!) to create a dual boot Ubuntu-FreeDOS environment on this old Dell. TR runs fine under FreeDOS. Since this machine does not have a floppy, I gave up a small amount of memory to install CDROM drivers, but even with that I have 615K for TR. I still do my email on my Windoze XP box, but Ubuntu (actually the Samba package) networks easily, so I can boot the contest computer to Ubuntu, transfer contest files, then reboot back to FreeDOS and TR. Plus I had the fun of learning about Ubuntu/Linux and FreeDOS.

73, John

2317. today at 1pm to Sunday at 8pm VHF contest

Yahoo group: Temple_ARC
Date: 2006-06-10 16:36:38 UTC
From: James
Topic: 2317 Message: 2317

Hello all, starting today at 1pm is the ARRL VHF contest , it's time for the Tech's to raise and shine and for the HF contester breakout the 706mk2g's and get on the air.

Suggested freq.'s

6m 50.125 usb 52.520 FM

2m 144.200 usb 146.55 FM

432.100 usb 446.0 FM

For the non contester pass out some points to the contesters,

Exchange

Your call sign and grid square

Any questions at all, feel free to ask.

2318. June VHF Contest Notes

Yahoo group: Temple_ARC
Date: 2006-06-10 19:17:26 UTC
From: Charlie Schlieper
Topic: 2318 Message: 2318

In an effort to be "helpful" to newcomers, I would like to list
a few TIPS that might help keep everyone informed. These
are a part of the General Rules that apply to ARRL VHF
Contests, such as the June 2006 VHF QSO event this
weekend.

1. Crossband QSOs do not count.

2. The use of repeaters is not permitted.

3. The use of 146.52 MHz (national simplex frequency)
is not allowed for either making a QSO, or soliciting one.

4. Contest entrants may NOT transmit on repeaters for the
purpose of soliciting contacts! (This rule seems harmless
to most new ops but must be observed.)

5. (I am paraphrasing this one...) You can't count two Grid
Squares just because someone lives on a dividing line
between two grids. You have to select one or the other.
(See rule 1.11 for exact wording...)

6. Don't forget that you need to stay away from using 50.100
to 50.125 MHz on 6m for this contest, and 50.125 should
be used as a calling frequency only. (see ARRL rule 1.14)

Enjoy Ham Radio!

Hi Bob,
Nice pics. I was at Hamcom too, but I had my shopping done and was gone by 10:30. And you were right about Saturday, the parking lot at Plano Center was full before 8 a.m. and they were shuttling folks from their overflow lot. I'm glad I met my needs on Friday and didn't have to go back Saturday. But, it was my first trip to Hamcom, I really enjoyed it and will probably go back.

Here are a few pics from Hamcom 2006 Friday afternoon in Plano. Pretty good crowd for a very hot Friday. I think that Saturday will bring a much larger turn out. There are lots of shade trees to keep cool under. Parking did not appear to be a problem.

Subject: FS: a couple of dual band HTs

I have for sale a pair of dualband (2m/70cm) HTs that need a new home. Both are in very good condition, and work just fine. For each one I have a copy of the manual on CD, and you can also find copies on the internet. I don't have the original manuals, though.

Both are the mini wideband receive HTs that run fairly low power. They are great for hamfest or crossband repeater work, or if you live nearby the repeater. Here is what I have:

1. Yaesu VX1R with charger, battery, belt clip, and antenna. Does 500 mw, or 1 watt if you run it off the charger.

2. Icom Q7A with antenna and belt clip. This HT runs off of 2 AA cells.

I am asking $75 for each one.

From: Myron Mesecke
Topic: 2324 Message: 2324

This Saturday after the TARC breakfast we will meet at the Early Day Tractor site to do site preparation and planning. Mowing and tree trimming if necessary. Planning needs to be done on station location and antenna positioning.

I would like to get an email from anyone who will be participating in TARC's Field Day. We are desperately needing people interested in operating the SSB station.

Please email me at meseckem@...

Hope to see you at the breakfast and the site this Saturday.

Breakfast is at 9 AM and then show up at the Early Day site at 10-10:30.

Myron

From: WR1TX
Topic: 2325 Message: 2325

I may be available that weekend after 12 noon on Saturday. My Alinco DX70TH is in the shop at Burghardt in South Dakota (just arrived there today) and that will likely kill my personal Field Day plans.

If TARC will have me, I may very well be there to help the club out.

Myron here,

If you are going to participate in Field Day please send me a reply to this email. I really need to have an indication of how many members will be involved.

Also, after this Saturdays TARC breakfast, we will be meeting at the Early Day Tractor site for preparation and planning. The breakfast is at 9 AM and we will go to the Field Day site between 10-10:30. Mowing and trimming low tree limbs will be part of the prep work. Antenna placement and station location needs to be worked out.

2328. TARC Field Day Status 6/17/2006

Yahoo group: Temple_ARC
Date: 2006-06-17 22:32:49 UTC
From: ke5c
Topic: 2328 Message: 2328

Please reply to Temple_ARC@yahoogroups.com so we can all be aware of developments.

Call CQ! Our operating goal this year is to call CQ for 24 hours on both CW and SSB. We won't have the antenna power we did the last two years (two tribanders), but the way to make QSO's still remains to call CQ, not to dial around the band trying to pick a few folks off. Let them find W5LM/W5T!

The GOTA station looks good. Ron, W5WRE, is bringing a rig, laptop, and we will use TARC's multiband dipole on a push up pole for the antenna. BTW, does anyone remember which bands that covers? Myron and I looked at it in the shed today, but it was rolled up all nice and we didn't want to tangle it up just to figure out which bands were covered.

The CW and SSB stations will use vertical antennas. One will use the club's, and I have an unmounted but mostly assembled 80-10. We need one or two sections of 20G or 25G to stick on the base stub to mount the club vertical which does not require radials. My vertical will be mounted somehow in the filed to the south of the pavilion, and will need a few radials. Alernately, we might try to mount this vertical somehow using the metal roof of the pavilion as a ground plane, but something will work out.

Can anyone bring a decent radio for the SSB station, or can someone bring a decent radio for the CW station so we can use my Orion on SSB? My Orion has been a bit flakey lately, but I'm hoping it will hang together one more week. A decent radio is an Icom Pro2 or 3, a 1000 series Yaesu or a 2000 series Kenwood, or a Kenwood ts850s with filters. The other thing we really need is an outboard digital voice keyer if we don't have a Pro 2 or 3 for the SSB station. I don't suppose anyone has one of those? Maybe we need to buy one ASAP... And a second laptop for logging. I'll bring one.

The grass is in pretty good shape, and we can get by without mowing. The pavilion is clean, BUT THERE ARE NO TABLES! Myron was going to call about that this afternoon... Darwin is bringing filet mignon or brisket, don't remember which.

We need operators, especially night operators!

Does anyone have something we could use on 6 meters? Radio and vertical? 50 mhz was open somewhat during the VHF contest last weekend, and might well be again FD weekend.

I'm hoping Mike will do the PR release and that Floyd will copy the bulletin so we at least earn the easy bonuses.

Please reply to Temple_ARC@yahoogroups.com so we can all be aware of developments.

73, John

My vertical will be mounted somehow in the filed to the south of the pavilion, and will need a few radials. Alernately, we might try to mount this vertical somehow using the metal roof of the pavilion as a ground plane, but something will work out.

Can anyone bring a decent radio for the SSB station, or can someone bring a decent radio for the CW station so we can use my Orion on SSB? My Orion has been a bit flakey lately, but I'm hoping it will hang together one more week. A decent radio is an Icom Pro2 or 3, a 1000 series Yaesu or a 2000 series Kenwood, or a Kenwood ts850s with filters. The other thing we really need is an outboard digital voice keyer if we don't have a Pro 2 or 3 for the SSB station. I don't suppose anyone has one of those? Maybe we need to buy one ASAP... And a second laptop for logging. I'll bring one.

The grass is in pretty good shape, and we can get by without mowing. The pavilion is clean, BUT THERE ARE NO TABLES! Myron was going to call about that this afternoon... Darwin is bringing filet mignon or brisket, don't remember which.

We need operators, especially night operators!

Does anyone have something we could use on 6 meters? Radio and vertical? 50 mhz was open somewhat during the VHF contest last weekend, and might well be again FD weekend.

I'm hoping Mike will do the PR release and that Floyd will copy the bulletin so we at least earn the easy bonuses.

Please reply to Temple_ARC@yahoogroups.com so we can all be aware of developments.

73, John

I feel the same way. Be careful, Jim.

John, what will be the plan for usage of the CW and SSB stations for FD? Is there a possibility that at one point CW or SSB might be used at both stations depending on conditions and contacts available, or is the plan to simply keep the operating modes separate during FD?

Just curious, since I have a spare simple Ameco straight key that I used last year for FD that worked well, that could be pressed into service if needed.

Email me on or off the reflector concerning this issue and others if you wish.

Just a quick show of hands from everyone that will part of TARC's Field Day.

1. Do you have a laptop or other computer that can be used for logging?
2. If you do, it needs to be there Saturday morning during set up.

John, KE5C has already posted here which program to download and use.

I plan to bring two air-filled camping matresses; one is a queen-size mattress and the other is a full-size mattress. Both can be blown up using a rechargeable pump that I will bring to the site.

Now if someone needs to take a nap for a little while, he/she can rest on something comfortable!

I didn't feel folks were under pressure last year, did you? Field Day is an emergency communication exercise and demonstration, and it runs 24 hours for a reason. Emergencies don't just happen when you are available and relaxed. We are demonstrating the ability to set up and operate a communication facility on short notice and under some pressure. Any contester will tell you this is not a contest, but that doensn't mean contest skills and knowledge are not helpful. In order to make as many demonstration contacts as possible, I believe the phone and cw stations should be calling cq most of the time. During contests it is well established that calling cq produces twice the number of contacts as looking around for folks who are calling cq. This should be no different during Field Day. Calling CQ is more of a communications leadership step than just following around the band looking for someone else who is leading. Calling CQ is much like orchestrating a net and skills
the operator in frequency control techniques.

Field Day is also a social event, and the entire purpose of the GOTA station is to encourge the casual operator to make hf contacts in a helpful, relaxed environment. My hope the last few years was that everyone who showed up would make at least a few contacts. I know I asked everyone I passed but had few takers. Maybe that will change this year. If you are operating and someone comes by and looks, ask them if they want to sit for a while. Move them into the second chair for a few minutes so they get into the flow, then move them into the operator's chair. This reminds me, we need headphones and splitters!

73, John

Contest skills and knowledge are certainly helpful during FD, for the simple fact that the sharpening of such skills can help during a real emergency. I've experienced that myself on several occasions; without the Field Day experience and practice, as well as other events such as the Texas QSO Party and etc., I might not have been able to handle the pressure and traffic that can often come when a real situation comes along and drops right in your lap.

Yes, FD is supposed to be fun but we should all remember the real reasons the event is held in the first place.

Wanted to update everyone. Things are looking pretty good for Field Day. Everyone is invited to come out and have a good time and operate. Set up will begin Saturday morning at 8 am with operating to start at 1 pm.
If you know you will be eating at the evening meal at 6 pm on Saturday please email me so we can have enough brisket on hand. Feel free to bring a side dish you might want to share. We are going fairly basic on the meal so we don't have lots of food leftover.
Hope to see everyone there.

BRISKET??? You know we've got to be there for the brisket, now!

But seriously, we could really use a good showing this weekend. There may be a chance of rain this weekend, but the operating area is covered nicely and I'm sure that you'll stay dry. The more operators the better, and the more support the better. Come on out and support us this weekend.

2364. July 4th Parade info

Yahoo group: Temple_ARC
Date: 2006-07-02 15:58:19 UTC
From: k5doa@vvm.com
Topic: 2364 Message: 2364

Our participation in the line up process for the Belton July 4th parade is coming up Tuesday morning.

We will plan on meeting at the parking lot at the corner of 9th and Pearl between 7 and 7:30 on Tuesday morning. Enter Mary Hardin through the main gate on 10th from 317 and turn left on Pearl at the next intersection. Then turn right on 9th and enter the lot. We need to be there well before 8 because the city will close 317 at 8AM sharp. If you should be late, it will be necessary to enter the campus from the west side off the loop.

Becky Hendricks was involved in a horse riding accident and won't be with us this year. But she is helping the replacement with all the documentation, so we should have the usual set of spreadsheets showing the line up positions.

We will plan on using the Belton repeater as usual. The frequency is 147.3/147.9 with a 88.5 tone. It has worked great for us in the past.

There should be plenty of water available. I am picking up a chest for our use tomorrow just in case they are slow getting around with the carts.

Tee shirts will be provided. I have ordered 12 and we have 7 signed up so there should be plenty for any last minute volunteers. Be sure to bring some strong sun block and a big hat. Rain gear might be indicated, but that is wishful thinking in the current drought.

Thanks to all who have indicated they can help. We can always use more help. This is a good event that exercises our communications capabilities. If you are a new ham, this is a good event to get involved with. Even if you have not purchased a radio yet, we can pair you up with a buddy on the line up team. If you have not indicated to me that you can help, drop me a note at k5doa@.... Or if you don't know until the last minute, just show up on Tuesday.

The parade starts from 10th and 317 at 10 o'clock. If past experience is a clue, we should be done sometime at or before noon.

I will be attending the last meeting Monday afternoon, so check here on the reflector tomorrow night for any last minute changes. Otherwise, see on Tuesday morning. 73 - Darwin K5DOA

2368. July 4th Parade Update

Yahoo group: Temple_ARC
Date: 2006-07-04 00:35:26 UTC
From: k5doa@vvm.com
Topic: 2368 Message: 2368

I attended the last parade meeting today. Very little has changed. Jason Morgan is our point of contact and I will stick with him.

We will plan to meet under the big oaks on the parking lot at 9th and Pearl. We'll team up, choose places and complete the briefing by 7:30 AM so everyone can get to their places before the roads close at 8AM. If I should be out with Jason when you get to the lot, look for my black truck with the tall camper and form up there.

One thing different from last year is that the construction in the back of the campus is complete, so the lineup will all be along College steet instead of in the lots like last year. That should make finding locations easier - although the scheme last year seemed to work OK. The number of entries is down quite a bit from last year and I have been repeatedly told that the college folks will fit lined up down one street. The lineup on Industial is about the same as last year.

There should be plenty of water available. Everyone sure and bring a hat.

Maybe we will have clouds and no rain in the morning. The forecast indicates that may be the case.

CU there. 73 - Darwin K5DOA

Hello All,

I thought I would share a few pictures of my newly installed Reliance R-30310B ProTran Power Transfer Switch. Power transfer switches are required by the National Electric Code, as a safe and acceptible method of connecting an emergency power generator to your home.

73,
Charlie, N5TD

I experimented using a big rotary inductor copper coil
with a conventional 5-band BUTTERNUT VERTICAL to
see if I could easily modify it down to 80m.

The big coil easily tuned the antenna down to 3.5 MHz
with an SWR of 1:1. It even went down lower, with good
results.

The three inserted pictures show the BIG COIL. 73!

I know the TARC reflector is NOT a DX cluster, but 6-Meters
has been very OPEN today from Central Texas. Worked
stations in Florida, Georgia, Alabama, Tennessee, and
West Virginia just to name a few. Even 52.525 MHz FM
has been alive!

I bought Joe DiMare, K5THB BIG IR vertical Step IR antenna. It is mounted on a 35 X 65 Metal roof. There is also a Cushcraft A3WS, 12 and 17M yagi that will go above the HyGain Explorer 14 triband yagi on the 60ft Rohn 55G tower. The HyGain 66DX, 6 Element, 25ft boom 6M yagi will go on top. The mast is a 21ft stick of 1 3/4 Schedule 40 tubing with steps. I took the 66DX Yagi down because wind vibration caused several elements to break off. I added nylon cord inside the elements to dampen vibration. Finally there is a TEKK brand TV antenna similar to the one John W5VYY mentioned earlier this afternoon. Hope u enjoy the pictures, 73, Steve NU5D

Roger W5WIA is putting together a meeting of ARES and CERT members:
Response Teams - Just now beginning to have the first gathering of interested
members - which is scheduled for Sunday July 16th 14:00 (2:00pm) in the EOC @
CTECC. This will be for ARES and CERT members combined. Until we meet and begin
the process, I don't have much in the way of information. It will depend on what (and
how) the group decides to take this. The thoughts are to develop 3-man teams with
diverse abilities to prepare as a team (in advance of need) to go into a disaster area -
primarily for communications, and hopefully to help with the Incident Command
structure, and other areas the teams would like to include.
Please contact Roger W5WIA@... for more info.

Remember, the Red Lion Hotel at IH-290 E and I-35, location of Austin Summerfest,
has changed its name. It is now a Holiday Inn "Crowne Plaza".
Please refer to http://www.austinsummerfest.org for more information or contact

2384. Sound-Card Audio Analyzer

Yahoo group: Temple_ARC
Date: 2006-07-14 03:08:40 UTC
From: Charlie Schlieper
Topic: 2384 Message: 2384

For many of you who actively use computers in Amateur Radio,
which utilize Sound-Cards with Radio Interfaces, you might take
a look at a neat program which conveniently tests the qualities
of your computer sound-card. RightMark Audio Analyzer 5.5.

With a simple loop-back configuration, the program will yield
diagnostic information on frequency response, noise level,
dynamic range, total harmonic distortion (THD), intermod
distortion (IMD) + noise, stereo crosstalk, and swept frequency.

Loop-back can be done in a couple of ways: 1.) connect a
stereo cable between LINE-IN and LINE-OUT of your sound-
card; 2.) Select STEREO-Mix in the RECORD window of
your sound-card setup. (The latter may not provide accurate
testing of all features, depending on how your sound-card
inputs and outputs are configured-- stereo, mono, one side
only.)

Download at: < http://audio.rightmark.org/download.shtml >
(A pdf file is also available for help in ENGLISH.)

73,
Charlie, N5TD

2385. Third Option for Loop-Back

Yahoo group: Temple_ARC
Date: 2006-07-14 14:21:47 UTC
From: Charlie Schlieper
Topic: 2385 Message: 2385

In reference to RightMark Audio Analyzer 5.5:

This is a third option for achieving "loop-back" if you don't have
Stereo-Mix in your RECORD list.

Double-click on the Volume (spkr) ICON to bring up your sound
card panel, click on OPTIONS, PROPERTIES, and RECORDING.
Then select and raise the level of "WAVE-IN" while in that panel.

An older computer LAPTOP with Windows 98se required this
method to work well with RMAA 5.5.

73,
Charlie, N5TD

2387. 800-900 MHz Antennas

Yahoo group: Temple_ARC
Date: 2006-07-15 23:17:08 UTC
From: Warren Rowe
Topic: 2387 Message: 2387

An off-topic question, but here goes: I'm seriously considering purchasing one and maybe two 800-900 MHz Yagi antennas for serious monitoring of the 800-960 MHz bands.

Even though the 800 MHz rebanding efforts are going on nationwide as well as some local changes that may be impending, I know there are still some excellent monitoring opportunities in that area of the spectrum. Does anyone have any suggestions concerning Yagi and even omnidirectional antennas for the 800-900 MHz area? Any help would be appreciated.

Thanks as always,
Warren Rowe, WR1TX
Temple, Texas

Clear DayHEAT ADVISORY IN EFFECT UNTIL 7 PM CDT THURSDAY.

THE NATL WEATHER SVC IN FORT WORTH HAS ISSUED A HEAT
ADVISORY.WHICH IS IN EFFECT UNTIL 7 PM CDT THURSDAY.

PERSONS INVOLVED IN VIGOROUS OUTDOOR ACTIVITIES ARE URGED TO TAKE
FREQUENT BREAKS & DRINK PLENTY OF WATER OR OTHER NON ALCOHOLIC
BEVERAGES. WEAR LOOSE FITTING & LIGHT COLORED CLOTHING. BE SURE
TO CHECK ON CHILDREN & THE ELDERLY AS THEY ARE THE MOST
SUSCEPTIBLE TO HEAT EXHAUSTION & HEAT STROKE. PEOPLE & PETS
SHOULD NEVER STAY IN AN ENCLOSED VEHICLE WITH THE AIR CONDITIONER
OFF EVEN FOR A SHORT TIME.AS TEMPS CAN QUICKLY RISE TO
LIFE THREATENING LEVELS.EVEN IF WINDOWS ARE PARTIALLY OPENED.

Hopefully everyone will follow this closely; too many people do not take heat serious enough. I've seen too many stories about children, the elderly, and pets dying by being left in the heat or not being checked on near enough during periods like this.

For those of you that knew or talked with Dan on the radio.....here is the information out of the Rockdale Reporter.... He was really a nice fellow.
Gordon
N5MRZ

Rockdale Reporter Online
Natural causes supected in death at stock tank

Sheriff Charlie West said investigators believe a 66-year-old Rockdale area man who died Tuesday afternoon while fishing near his home died of natural causes and did not drown.
West said D. C. Drummond Jr. was found about 3 p.m. by his wife, Yvonne, partially in a stock tank across FM 487 from their home northwest of Rockdale near the Tracy community.
"He had left about 12:30 p.m. to go fishing," West said. "He had on waist-high rubber waders and was carrying a float tube."
West said Drummond liked to float in the tank and fish. "We're not sure if he even made it out there very far into the tank, or got out there and came back to the shore," West said.
West said Drummond was found partially in the water. "He was about half in, but his head and shoulders were not in the water and we just don't think he drowned," the sheriff said.
Precinct 1 Justice of the Peace Chip Dunsmoor pronounced Drummond dead at the scene.

2399. New AccuMate Battery Charger

Yahoo group: Temple_ARC
Date: 2006-07-22 01:22:05 UTC
From: Charlie Schlieper
Topic: 2399 Message: 2399
Attachments: 2 described; binary payloads are missing from this source WARC

I know there are a number of good automatic battery charging systems available today, but I recently bought an AccuMate multi-stage 'smart' battery charger to try.

It is "fully automatic" and charges all kinds of lead-acid batteries, even GEL types. So far, my tests have all been impressive! It charges at a constant voltage and current until it a fully charged condition is sensed. Then it switches down to a lower voltage, lowering the charge current to a maintenance level for the duration of time the charger is connected.

The first thing I did when opening the box, (due to my traditional battery charger instinct), was connect a voltmeter to the terminals and plug it into AC. "Wallah! A dead charger" I thought... But it's a smarter than that, and knows when you don't have a battery connected, so it doesn't turn itself on.

Below are two pictures using this charger to charge a GELCEL in a transmitter hunting kit, complete with carrier timer and automatic ID unit. (The HT in this picture was an old piece of junk that was perfect for this project.)

The charger does a great job!

Enjoy Ham Radio!
Charlie, N5TD

2400. VHF BEAM AND 100 FOOT COAX

Yahoo group: Temple_ARC

Coax ... seperately? Both rolls? Is it low-loss type of RG-8 or solid center type?

Charlie

2402. Mobile APRS question

Yahoo group: Temple_ARC
Date: 2006-07-23 17:51:16 UTC
From: Paul Munsel
Topic: 2402 Message: 2402

Hello Group,
I have a mobile APRS question, and am hoping for SIMPLE answer(s). I will be making a trip to Indiana by car soon, and want to have APRS running. I have a Garmin 38 GPS, a KPC-3 (not plus), and an Alinco DR-1200. I have the cables for the connections as well. How do I set up the system, to broadcast without a computer running it all the time? I know there needs to be a "string" of information input to the TNC initially etc. Can someone tell me about this in an easy to understand format? I will probably work on it some this afternoon, and if I get it running, will do a "shakedown" this week on my short trips to work and back. Thanks.
73,
Paul N5XMV

There was a pretty large grass fire at North Fort Hood this afternoon.
Roadside pictures are about 1 mile East of the fire, and the shot from my
farm is about 5 miles NE.

www.bosshardradio.com/NU5D/fthood

John AD5RN took some pictures of me hanging the Hygain 66DX, 6 Element 6M
yagi and the Cushcraft A3WS, 12/17M 3 Ele Yagi, with the Hygain Explorer 14
triband yagi at the bottom. The tower is 60 ft with a 21 ft stepped mast.

unless someone is running that exact setup, you will have to
experiment a little bit. here are two references to kpc-3 settings to
do what you want. they may actually be from the same source (both
about half-way down each page):

http://skynet.entz.net/webpages/shorty/kcaprs/Config.html

http://nwaprs.info/mobilesettings.htm

good luck! might be an interesting meeting program too ...

73, john

Clear DayAustin SwapNet 07/16/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Rectangular Coordinators,

Summerfest is rapidly approaching- Aug 4-5! There are always plenty of volunteer opportunities for this convention, please get involved! Joe W5HS@...
Tailgate area coordinator: 6AM-10AM, to make sure parking is done orderly and handicapped spaces are not blocked. Joe W5HS@...
Talk-in NCS: A few slots left Fri 7-9PM, Sat 6-8AM, Sat 10-12AM.
Dallas KD4HNX mylastname@... www.tcares.org/austinsummerfest_talk-ins.html
AARC club display table (close to ARRL table): Jeff N5MNW@...

Remember, the Red Lion Hotel at IH-290 E and I-35, location of Austin Summerfest, has changed its name. It is now a Holiday Inn "Crowne Plaza".
Please refer to http://www.austinsummerfest.org for more information or contact Joe W5HS 345-0800 w5hs@...

The first meeting of the ARES/CERT "Rapid Response Teams" was held at CTECC Sunday. Roger W5WIA reports a good deal of planning has gone on but much more to be done. Another meeting will be held at CTECC July 30 at 2PM.
Please contact Roger W5WIA@... for more info.

MSET is looking for comms volunteers for the "Heat Wave" car show July 21-23 at the Expo Center. Ops will be similar to ROT Rally and a Ham license is not required (Commercial Freqs). See www.MSET-TX.org for more details.

MSET is also looking for volunteers for the STAR Flight 5K.
Event- STAR Flight 5K
When- Saturday July 22nd
Time- 6:30 am - 10:30AM
Location- Zilker Park
Contact- Barry- 699-8611 or pio@...

July 18 AARC Officer's Meeting 3rd Tue 6PM- Mangia's at Burnet/Gracy Farms

July 25 TCARES General mtg 4th Tue 7PM- ARL www.TCARES.org

Aug 1st AARC biz mtg 1st Tue 7PM- Mangia's at Burnet/Gracy Farms
Come join us for dinner at ~6PM and be ready for the biz meeting at 7PM
Topic- TBA

Aug 8th "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
(Pizza $1/slice, drinks 50c or bring your own snack)
Topic- TBA

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other things AARC is up to, please join us and get involved!!

AARC dues can now be paid online! It's now easier than ever to renew and/or join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Jeff N5MNW@... or Jerry N5UJ@... for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store, tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter. It might not help, but it couldn't hurt!

From: ke5c@hot.rr.com
Topic: 2402 Message: 2408

I think the pinout for a KPC-3 is different than a KPC-3+, and the
wiring on the site below is for the KPC-3+. 73, john

2409. mobile hf and cw

Yahoo group: Temple_ARC
Date: 2006-07-24 22:02:47 UTC
From: ke5c@hot.rr.com
Topic: 2409 Message: 2409

we drove to colorado this past weekend, and i finally reinstalled my ft-857 for the trip. i had been bummed out due to some incredible shoddy and incredible expensive repair work performed by yaesu. a bit off topic, but this will be the last yaesu i ever own for that reason. anyway, i had forgotten how much shorter a trip is when you have a mobile hf radio. i listened some on 50 mhz, but i don't thing there were any openings, at least i didn't catch any. about 2/3's of the time i was on cw, the rest on ssb. early saturday morning i worked w6lv/mm off the coast of california on 40 meter cw, then mid-afternoon i worked him again on 20 meter cw. turns out, w6lv is the callsign of a ww2 victory ship:

http://www.lanevictory.org/radio.htm

so that was pretty interesting. the best qso was a 20 minute or so ragchew with a fellow whose call escapes me at this very minute but who lives near fredericksburg. here is the mobile run down:

http://www.ke5c.net/mobile/

Clear DayAustin SwapNet 07/23/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Troposphere Troupe,

Summerfest is rapidly approaching! Austin Summerfest schedules can be seen:
http://texashams.org/texashams/Austin_Summerfest_Schedule_text.pdf
http://texashams.org/texashams/Austin_Summerfest_Schedule_chart.pdf

Glen K5FX will be conducting a session on the Austin BPL Trial and basic noise measurement at the Summerfest.
The session is part of the Austin QRP Club Forum and will be at 1:40 PM on Saturday, August 5 in the Lone Star I room. Pete Collins, the City CT manager, has agreed to be there to speak and answer questions. Pete is the department head in charge of the BPL trial and is very aware of the potential RFI problems of BPL; he has been very helpful in dealing with the City bureaucracy.
GLEN REID K5FX

There are always plenty of volunteer opportunities for this convention,
please get involved!

Tailgate area coordinator: 6AM-10AM, to make sure parking is done orderly and handicapped spaces are not blocked. Joe W5HS@...

Talk-in NCS: A few slots left Fri 7-9PM, Sat 6-8AM, Sat 10-12AM.
Dallas KD4HNX mylastname@... www.tcares.org/austinsummerfest_talk-ins.html

AARC club display table (close to ARRL table): Jeff N5MNW@...

Remember, the Red Lion Hotel at IH-290 E and I-35, location of Austin Summerfest, has changed its name. It is now a Holiday Inn "Crowne Plaza".
Please refer to http://www.austinsummerfest.org for more information or contact Joe W5HS 345-0800 w5hs@...

The AARC has scheduled a two-week, six-session Technician Class to be held 6-9PM Mon, Wed & Fri from Aug 7-18. The Class will be held at Freescale Semiconductor's Ed Bluestein "North Lobby" conference room. Class References will use ARRL's "Ham Radio License Manual Level 1", although any study guide will be welcome. Class size limited to about 15. Contact Lori KM5MQ@arrl.net 255-6753

An AARC "Ham Slam" formatted Q&A session on Aug 19 from 9AM-1PM has been requested at St. Ed's, in Moody Hall, the same building as the 2PM exams.
http://texashams.org/w5yi-austin/
Students who attend the "Ham Slam" at St. Ed's should already be passing web-based practice exams, i.e.- http://www.qrz.com/p/testing.pl

If you know someone who would benefit from this class or the Ham Slam on Saturday morning, please contact Lori KM5MQ@... 255-6753.

The study book, The ARRL Ham Radio License Manual can be purchased locally at
the Austin Amateur Radio Store www.aaradio.com 454-2994.

The Highland Lakes ARC plans another ham radio technician class ("Ham Slam") on
October 20-22, 2006. It is scheduled to be held at the Herman Brown Library in Burnet.
A copy of a color flyer/poster is available by request so you can distribute or post it to
develop interest in the class. Please begin talking about this with your friends.
Rik Chapman, K5RIK@... www.hlarc.org/

Some of you knew I was playing in the 9th Annual "Central Texas Amateur" Golf
Tourney at Forest Creek. An Outback steak dinner, all the hot dogs and sausage
wraps you could eat, two kegs and 36 holes of golf made for a long, full weekend.
I did not (as expected) come in last but I was -very- close. 111 Sat and 108 Sun
for a total of 219. There was only one total score higher than mine- a 229!
I think I'll stick to scrambles...
Jeff N5MNW

July 25 TCARES General mtg 4th Tue 7PM- ARL www.TCARES.org
July 27 TCARES Weekday mtg 4th Thur 10AM- Denny's at Burnet/Anderson

Aug 8 "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
(Pizza $1/slice, drinks 50c or bring your own snack)
Topic- TBA

Aug 15 AARC Officer's Meeting 3rd Tue 6PM- Mangia's at Burnet/Gracy Farms

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other
things AARC is up to, please join us and get involved!!

AARC dues can now be paid online! It's now easier than ever to renew and/or
join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail
it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues
if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Jeff N5MNW@... or Jerry N5UJ@arrl.net for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store,
tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter.
It might not help, but it couldn't hurt!

2411. hello all from Baghdad, Iraq

Yahoo group: Temple_ARC
Date: 2006-07-26 17:54:01 UTC
From: James Kennedy
Topic: 2411 Message: 2411

Hello all, I'm still awaiting my Iraqi ham call guess it should come in a few weeks.

well things here in Baghdad is the wild west for sure. walk down the east side of the base and they will try to shoot you but there are out of range.

busy working here have a great day

Jim

2415. Coax for sale

Yahoo group: Temple_ARC
Date: 2006-08-01 18:28:07 UTC
From: Charlie Schlieper
Topic: 2415 Message: 2415

I have 99-ft run of low-loss Columbia RG-8/U Foam Coax,
complete with nickle-plated Amphenol PL-259 connectors
installed on each end.

I cut 1-ft off of a 100-ft roll becuase I saw a flaw in it.
This is NEW coax, never been used. --> $50.00

Charlie, N5TD

2416. ID Timer / Annunciator

Yahoo group: Temple_ARC
Date: 2006-08-01 21:28:33 UTC
From: Charlie Schlieper

I picked up a neat project kit this morning from Ron Bowden, AA5RT at coffee-- an ID-O-Matic. The ID-O-Matic is a multipurpose, PIC microcontroller chip PIC16F648A project, that has a wide application in ham radio for automatically sending CW IDs, timed cw beacons, or just acting as a 10-minute ID timer. It will even send "CW keying" from a computer keyboard!

It was easy to assemble, and it programmed like a dream using a standard packet terminal program, (Procomm+), set at 9600 baud. (For more information on the ID-O-Matic, contact n0xas@....)

Enjoy Ham Radio!
Charlie, N5TD

2418. Re: [Temple_ARC] Coax for sale

Yahoo group: Temple_ARC
Date: 2006-08-02 02:03:54 UTC
From: Charlie Schlieper
Topic: 2415 Message: 2418

The coax has been sold... Thanks!

Loss factor is not accurately known for this type,
but it was probably similar to Belden 8214 coax
on loss-- 1.8 dB/100ft @ 100 MHz... lower of
course down below 30 MHz HF.

Charlie

Clear DayAustin SwapNet 07/30/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Radiant Characters,

Sorry for the late distribution this week. Lots of distractions by this pesky real job...

Shane KE5HSS was called to make a delivery in Ft Worth Tuesday night, so was
unable to do the Gibson Ridge WX software presentation at Mangia's.
Thankfully, Glen K5FX was able to fill in and do a presentation on BPL and its
planned experimental deployment in the Austin area.

Summerfest is THIS WEEKEND! Austin Summerfest schedules can be seen:
http://texashams.org/texashams/Austin_Summerfest_Schedule_text.pdf
http://texashams.org/texashams/Austin_Summerfest_Schedule_chart.pdf

There are always plenty of volunteer opportunities for this convention,
please get involved! Contact Joe W5HS@... 345-0800

Talk-in NCS: A few slots left Fri 7-9PM, Sat 6-8AM, Sat 10-12AM.
Dallas KD4HNX mylastname@... www.tcares.org/austinsummerfest_talk-ins.html
AARC club display table (close to ARRL table): Jeff N5MNW@...

Remember, the Red Lion Hotel at IH-290 E and I-35, location of Austin Summerfest,
has changed its name. It is now a Holiday Inn "Crowne Plaza".
Please refer to http://www.austinsummerfest.org for more information

Glen K5FX will be conducting a session on the Austin BPL Trial and basic noise
measurement at the Summerfest.
The session is part of the Austin QRP Club Forum and will be at 1:40 PM on Saturday,
August 5 in the Lone Star I room. Pete Collins, the City CT manager, has agreed to be
there to speak and answer questions. Pete is the department head in charge of the BPL
trial and is very aware of the potential RFI problems of BPL; he has been very helpful
in dealing with the City bureaucracy.
GLEN REID K5FX

The AARC has scheduled a two-week, six-session Technician Class to be held 6-9PM
Mon, Wed & Fri from Aug 7-18. The Class will be held at Freescale Semiconductor's
Ed Bluestein "North Lobby" conference room. Class References will use ARRL's
"Ham Radio License Manual Level 1", although any study guide will be welcome.
Class size limited to about 15. Contact Lori KM5MQ@... 255-6753

An AARC "Ham Slam" formatted Q&A session on Aug 19 from 9AM-1PM has been
scheduled at St. Ed's, in Moody Hall, the same building as the 2PM exams but rm. 205.
http://texashams.org/w5yi-austin/
Students who attend the "Ham Slam" at St. Ed's should already be passing
web-based practice exams, i.e.- http://www.qrz.com/p/testing.pl

If you know someone who would benefit from this class or the Ham Slam on Saturday morning, please contact Lori KM5MQ@... 255-6753.

The study book, The ARRL Ham Radio License Manual can be purchased locally at the Austin Amateur Radio Store www.aaradio.com 454-2994.

Aug 8 "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
(Pizza $1/slice, drinks 50c or bring your own snack)
Topic- Paul Goble- ND2X, on his Java-based RF calculator.

Aug 15 AARC Officer's Meeting 3rd Tue 6PM- Mangia's at Burnet/Gracy Farms

Sept 5 AARC biz mtg 1st Tue 7PM- Mangia's at Burnet/Gracy Farms
Come join us for dinner at ~6PM and be ready for the biz meeting at 7PM
Topic- TBA

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other things AARC is up to, please join us and get involved!!

AARC dues can now be paid online! It's now easier than ever to renew and/or join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Jeff N5MNW@... or Jerry N5UJ@... for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store, tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter. It might not help, but it couldn't hurt!

2420. We all scream for ice cream!

Yahoo group: Temple_ARC
Date: 2006-08-02 17:25:12 UTC
From: Myron Mesecke
Topic: 2420 Message: 2420

Just a reminder to everyone that the August club meeting is our ice cream social. TARC is furnishing the ice cream but bring your favorite topping. If you have an ice cream scoop you can bring that would be helpful. Won't have to worry about mixing flavors by going from one tub to another that way.

Myron

good deal Steve, wish Iraq would use 6m , but after I get my Iraq ham call the only thing I can use here on Camp Anaconda right now is 20m , which I have to beg for , the Air force freq manager was not going to let me operate at all.

so all I do when my iraqi call comes in have kd5tat go packup my ts-2000 (what a waste just for 20m) and then have my wife send it to me.

last week , I got with yi9esg (kf4esg) and we work alot of europeans on 20m from baghdad.

take care
Jim

From: WR1TX
Topic: 2425 Message: 2425

Has anyone out there hooked up a RigBlaster to an Alinco DX70TH? I would like to know if there were any issues in doing that; I'm considering purchasing a RigBlaster Plus for my station.

Any help would be appreciated.

From: Charlie Schlieper
Topic: 2427 Message: 2427

This morning I was trying to print the August AO-51 satellie schedule that I downloaded from AMSAT.

The first page was cut off short, but putting it in "Landscape" mode fixed that.

Then the colors in the little blocks on the first page were not printing in color. I struggled with it for a while, then called Kay in to help. I showed her what the problem was, that all the little blocks were printing in black-n-white without any colors.

Kay was very helpful, and promptly brought me a big box of crayons!

Bless her heart!

Charlie, N5TD

2428. ARRL Texas State Convention...and a License Upgrade

Yahoo group: Temple_ARC
Date: 2006-08-05 21:51:37 UTC
From: WR1TX
Topic: 2428 Message: 2428

Went to Austin this morning for the Austin Summerfest, which was also the ARRL Texas State Convention. It was all right, I guess; I did buy a new Icom T90A there and got a good deal on it, too. I even ran into some old friends and made a couple of new ones as well.

The big thing was that I took the Extra exam later in the day (around 12:30-1pm). I passed it with some room to spare. That means I am (for now) WR1TX/AE until the upgrade shows up in the FCC database and/or QRZ.com, then I can drop the /AE identifier from the call.

About 10 years has passed as an Advanced licensee; getting my Extra was very much overdue! Now I can go where the REAL DX roams and operate wherever I want within the FCC rules...ah, freedom!!!!!

Warren Rowe, WR1TX/AE

Went to Austin this morning for the Austin Summerfest, which was also the ARRL Texas State Convention. It was all right, I guess; I did buy a new Icom T90A there and got a good deal on it, too. I even ran into some old friends and made a couple of new ones as well.

The big thing was that I took the Extra exam later in the day (around 12:30-1pm). I passed it with some room to spare. That means I am (for now) WR1TX/AE until the upgrade shows up in the FCC database and/or QRZ.com, then I can drop the /AE identifier from the call.

About 10 years has passed as an Advanced licensee; getting my Extra was very much overdue! Now I can go where the REAL DX roams and operate wherever I want within the FCC rules...ah, freedom!!!!!

2444. Working AO-51 Satellite

Yahoo group: Temple_ARC
Date: 2006-08-06 19:33:38 UTC
From: Charlie Schlieper
Topic: 2444 Message: 2444

AO-51, following the unexpected dissapointments of AO-40,
has been a real success! If you've ever thought of getting into
satellites, now might be a good time?

There is never any guarantee how long a given satellite will
last, but to date AO-51 has exceeded my expectations.

You might have to keep up with it's scheduled operating modes,
but that's not a problem since the AMSAT website provides that
timely information.

Mode-J (V/U) FM and Mode-L (L/U) have both functioned very
well, but the Doppler Shift on Mode-L is an eye opener! If you're
not familiar with sat modes, Mode-J indicates an UPLINK on on
2m and a DOWNLINK on 70cm UHF. Mode-L implies the use of
1.2 GHz for UPLINK, and 70cm for downlink RECEIVE.

AO-51 also has multiple DATA modes (9k6 and 38k4) as well.
S-Band Downlink is on 2401.200 MHz. Unattended digipeater
operation is frowned on! You should be a live operator when using
the data modes. I wished ISS packet was the same, as it has now
become overrun with unattended BEACONS. Remember when so
many thought it was cool to run an unnecessary packet beacon
just to say "Here's My Sign?"

Suggestions in operating AO-51:
You can program in several channels to compensate for
Doppler Shift, and work a lot of successful contacts.

Three CHANNELS might do it, but five seem to work best.
I use a similar approach for Mode-L, but with 9 channels
instead of 5. (1268.700 MHz)

I use five channels for AO-51 (Voice) Crossband FM Repeater:

Chnl 1 435.308 145.9170
Chnl 2 435.304 145.9185
--> Chnl 3 435.300 145.9200 (Cntr freq)
Chnl 4 435.296 145.9215
Chnl 5 435.292 145.9230

Single yagis for UPLINK and DOWNLINK should work, while
multiple phased arrays are even better. CP antennas are the
ultimate choice for the serious satellite buff! Some have made
good contacts however, just using simple verticals.

HTs:
I've worked crossband FM repeaters using my IC-W32A HT,
attached to a combo VHF/UHF Yagi that I put together, all
mounted on a modified tripod in the backyard. But it was a
real challenge! My COMBO YAGIs consisted of 3-elements
on 2meters, and 5-elements on 70cm, with a diplexer mounted
on the rear of the boom.

My Mode-L system consists of the following:
Terrestrial: four 35-element 1.2 GHz Yagis, 23CM35EZ, phased
together and fed with 1/2 inch copper heliax.
Satellite: two 24-element Yagis, 1.2-24LBX, phased together and
fed with 1/2 inch copper heliax.
Mode-L Amp: DownEast Microwave PAS-2370 solidstate amp.
Mode-L PreAmp: (Not used on UPLINK) ICOM AG-1200.

My Mode-J setup consists of several MODE-J FILTERS, along
with copper UHF BANDPASS FILTERS. There are some tricks
to get around using filters, but it all depends on your setup and
the power used. (Check out the information on Mode-J, given on
the AMSAT webpage.) Sometimes, a simple DIPLEXER (often
called a DUPLEXER nowadays) -- can help.

On lower ELEVATION angles, I frequently use my "TERRESTRIAL"
antennas with good results, which consists of the following:

FOUR 13-element YAGIs on 2m, phased together.
FOUR 18-element YAGIs on 70cm, phased together.
FOUR 35-element YAGIs on 1.2GHz, phased together.

On higher ELEVATION angles, I used my "SATELLITE" antennas,
which consist of the following:

* 38-element Circular Polarized (CP) YAGI on 70cm
* 18-element Circular Polarized (CP) YAGI on 2m
48-elements (two 24-ele YAGIs) on 1.2 GHz

* These Yagis both have pairs of frontend elements removed
for length adjustment and balance.

All Satellite antennas are mounted on a set of rotating RINGS
in the middle of my tower, complete with AZ/EL and CP
Polarization Control.

Satellite Radios used:

ICOM IC-970A (mode-L)
ICOM IC-821
ICOM IC-910H (mode-L)
ICOM IC-821 (second unit)
YAESU FT-847

As anyone can see, it doesn't take much of an investment
to work satellites. (Just ask my wife...)

Almost anyone can do it with a low-power MATCHBOX RADIO
and a RUBBER DUCK...
----Yeah, right!

(Come to think of it, leave my wife out of this, please.)

ENJOY HAM RADIO!
Charlie, N5TD

Hi Steve,

Missed you at COFFEE this morning. Had thought I
would answer questions in person. I know you will throughly
enjoy working some sats once you get into it.

No, my 1.2 GHz stuff is not CP, just linear yagis stacked.
Seems to do just fine when you can change the ELEVATION of
the array to track.

There are some times when reversing the CP polarization
from the standard "Right-Hand" to "Left-Hand" makes a difference,
but most of the time it is not necessary. Most satellites use the
standard RHCP configuration.

You have a PRIME LOCATION out there in Gatesville
for weak-signal SATELLITE work.

73,
Charlie

Clear DayIt seems in years of late that TARC has really worked hard to provide parking places for folks with challenges, but neglected to accomodate these folks once they are in the Expo Center. This was made know to me by a ham that cannot walk or stand for an extended length of time.

I hope the leadership of TARC will take advantage of this very timely request to provide adequate seating and perhaps a rest station for folks that cannot be on their feet for an extended length of time.

TSGARC Dinner/Program

Everyone's Welcome

6:00 p.m. Dinner: Chicken, rice, vegetables, dessert and ice tea.

7:00 p.m. Program: Photo trip to Hartford CT, headquarters of ARRL.... Report presented by Bill Feltenberger, kd5uew.

The TSGARC clubhouse is located at 3292 Speegleville Road in Waco, halfway between Highway 6 and Highway 84.

2468. USB/DB9 Serial Port Adapter

Yahoo group: Temple_ARC
Date: 2006-07-27 02:06:30 UTC
From: Bill Mossman
Topic: 2468 Message: 2468

Has anyone had any experience with using an Icom radio programming cable connected to a USB/DB9 serial port adapter cable? I think that I remember someone posting info on this sometime ago. Please reply by email to bmossman@hot.rr.com if you can be of assistance.

Bill Mossman W5ARO

Clear DayAustin SwapNet 08/13/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Thermionic Cathodes,

Lots of HOT weather keeps hanging over Central Texas. I spent about 20 minutes
mowing the front yard and wished I had done it at 8AM! Keep the liquids coming!

H.L.A.R.C. Exam Session Saturday August 19 8AM till 12noon at Marble Falls
Library 101 Main St. Time. Contact Sanford Musgrove (325) 388-4402,
w5fit@... for more information

An AARC "Ham Slam" formatted Q&A session on Aug 19 from 9AM-1PM has been
scheduled at St. Ed's, in Moody Hall, the same building as the 2PM exams but rm. 205.
http://texashams.org/w5yi-austin/
Students who attend the "Ham Slam" at St. Ed's should already be passing
web-based practice exams, i.e.- http://www.qrz.com/p/testing.pl

Aug 15 AARC Officer's Meeting 3rd Tue 6PM- Mangia's at Burnet/Gracy Farms

Sept 5 AARC biz mtg 1st Tue 7PM- Mangia's at Burnet/Gracy Farms
Come join us for dinner at ~6PM and be ready for the biz meeting at 7PM
Topic- TBA

Sept 12 "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
(Pizza $1/slice, drinks 50c or bring your own snack)
Topic- Paul Goble- ND2X, on his Java-based RF calculator.

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other
things AARC is up to, please join us and get involved!!

AARC dues can now be paid online! It's now easier than ever to renew and/or
join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail
it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues
if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Jeff N5MNW@... or Jerry N5UJ@... for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store,
tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter.
It might not help, but it couldn't hurt!

Ham Radio Spoken Here...NU5D EM11

2472. QSO with K5DOA

Yahoo group: Temple_ARC
Date: 2006-08-15 03:06:45 UTC
From: WR1TX
Topic: 2472 Message: 2472

I just had a pleasant QSO with Darwin, K5DOA, on 3548 CW a little while ago; it went about 20-30 minutes or so...I think the speed was near 20 wpm. CW can be, and is, fun if you can get it down enough, and conversations can be quite enjoyable! It just takes on-air practice.

If there's anyone that wants a CW contact that needs help with his speed, I'll be happy to sit down and have a QSO with you. Mind you, I certainly can't get past 20 wpm (about 12-15 is good for me for now) but I am willing to go any speed below that...even 5 words per minute if it takes that! Just drop me a note and I'll see what I can do, for it will depend on my varied work schedule.

CW is not a bad thing, everyone. It's fun; just try it!

Warren Rowe, WR1TX
Temple, Texas

2473. Texas Towers

Yahoo group: Temple_ARC
Date: 2006-08-15 05:57:18 UTC
From: James Kennedy
Topic: 2473 Message: 2473

Yesterday after winning a bid on a Radio on ebay I want to order some items so I could operate in Iraq.

So I sent a e-mail to Texas Towers.

James Kennedy wrote:

The response was fast, but after reading the e-mail I thought how stupid of a bussniess practic that is. Look at this you go to the beach to have fun with the grand kids and you loose the rubber duck to your HT and you call trusty Texas towers but they send the rubber duck to your home in Temple/Killeen area and you still can't talk on your trusty old HT.

For Texas Towers and the unknowing, any box, letter or post card that goes to a APO goes to the main APO in NJ and then to the right Army Post office. The only difference is a customs form.

Steve, HRO will do it with no problems, all I was doing is spend my money in Texas.

in fact Barry at HRO last year sent my ts-2000 me in Kuwait so HRO will do it. the only difference is to a Army APO it must go priority mail.

Now I can get FEDEX here also

I just think that Texas towers has there head in the sand, (I had to be nice)

The customs form isn't the problem. The problem is the trip to the post
office, and a 20-30 minute wait in line. We used to do it, but it just got
to the point we couldn't justify the time cost.

I apologize for the inconvenience.

Steve, here in AFB Balad (camp anaconda)68 miles north of baghdad, there is no station here , vhf is tightly controlled and the freq manager will only allow me 13.8-14.7 in freq. I'm ordering from HRO a 20 hamstick I can put on top of the steel box I live in. I got a IC-718 from e-bay on the way and 100 watts and vertical don't know if the propagation gods will allow me to have fun, in about 30 days tune around 14.200 and listen for me at 11pm at night, that is 5am here (I think I got that right off the top of my head) and I would be able to dedicate 1 hour to the radio before I have to run to work.

10,500 soldiers get to used 15 free computers , my 15 time limit is up

I'm in a business that if there is will, there is a way. Texas towers don't have the will.

Yes, good clean fun on 80. I usually keep a rig on 3546.7 year round as that is a gathering spot for boatanchor guys and homebrewers as well as folks who just like to keep 80 alive. The band has a lot more skip in the summer than most folks think. And it just gets better as the sunspot number gets lower.

So dust off the old key and join us some night, especially around 9PM local. I have a straight key and can match whatever speed you feel most comfortable with.

BTW, I have a few crystals on 3546.7 free to anyone who would like to try constucting a simple QRP rig or dust off an old Heath DX-20 or whatever. A transistor or two would get you out around Temple and all over the US when good skip comes again this winter. Drop me a note if you need a rock.

2483. hp deskjet 3500 series prntrs

Yahoo group: Temple_ARC
Date: 2006-08-15 22:12:56 UTC
From: Charlie Schlieper
Topic: 2483 Message: 2483
Attachments: 1 described; binary payloads are missing from this source WARC

A helpful note... to hams who either have, or run across an opportunity to obtain a discontinued "hp 3520" color deskjet printer, this may be of interest.

Recently, a ham friend gave us an hp 3520 color deskjet printer, to play with. The print cartridges were low in ink. Since I've had more than my share of good luck in re-inking printer cartridges, I decided to see if I could revitalize this printer.

I secured the color cartridge in a vice, and marked places to drill small holes in the top. However, before I did this, I peeled back the top label and discovered pre-existing holes there that were convenient for re-inking. The black ink cartridge also had holes in its top. They were both covered up by the label, and not obvious. This surprised me, as many other printer cartridges are not as easy to access.

After re-inking both cartridges with my HP Re-inking KIT, this 3520 deskjet began printing like new! However, re-inking printer cartridges is an art, can be messy, and is not always a success.

2486. The Great Deluge

Yahoo group: Temple_ARC
Date: 2006-08-17 03:45:34 UTC
From: WR1TX
Topic: 2486 Message: 2486

I have begun reading an interesting book painting a pretty accurate picture of what happened before, during, and after Katrina last year. "The Great Deluge" by Douglas Brinkley is a bit of a long read: nearly 600 pages. I'm at around page 100 right now, and there are some interesting viewpoints from many different people about the events leading up to Katrina's landfall: local residents, New Orleans and Louisiana state officials, and federal government officials...what was known, who screwed up, who did excellent work, evacuation procedures (or not), and much more.

Like I said, I'm only at page 100 of a 600-page book...but I'm beginning to believe that this might be an excellent primer on how NOT to protect and evacuate a major city from an impending weather disaster. I'll have much more detailed information when I finish the book and place my review of it on my blog site, which may be a few weeks down the road.

Meanwhile, back to CW...

2487. pass this info around about HRO in NH

Yahoo group: Temple_ARC
Date: 2006-08-17 18:57:28 UTC
From: James Kennedy
Topic: 2487 Message: 2487

I was trying to call the 800-444-0047 for HRO and tried tried and tried, but then I called the Denver store and they answer got put on hold for Iraq , oh well, then I call Atlanta and after ordering the stuff I need he told me the HRO store in NH the Main store as some would call it is closed, due to a major gas leak and had to evacuate!

so call the other store for the time being the server is in the NH store so there is no way to update so such a fact.

With Texas corn it varies from region to region as to how well the crop turns out. Overall the last 5-7 years it's been mediocre to poor, especially the last two years.

Texas has had good corn crops in the past, but to be honest I can't put a finger on the last time a good crop was harvested.

2494. Sun's Next Stormy Cycle Starts

Yahoo group: Temple_ARC
Date: 2006-08-21 03:39:43 UTC
From: G
Topic: 2494 Message: 2494

www.space.com/scienceastronomy/060818_sun_cycle.html

Astronomers say the Sun has begun its next cycle of activity, part of an 11-year ebb and flow in sunspots and solar flares.

Solar activity is near the low point in the cycle now. Few sunspots appear and solar flares are rare. But on July 31, a tiny sunspot appeared and then vanished after a few hours. It was a normal event, except that it was magnetically backward.

"We've been waiting for this," said David Hathaway, a solar physicist at the Marshall Space Flight in Huntsville, Alabama. "A backward sunspot is a sign that the next solar cycle is beginning."

Two lines of evidence

Sunspots are areas of strong magnetic activity, where material wells up from below. The dark spots are like tops on a soda bottle, and sometimes they erupt and send bubbles of superheated gas, called plasma, into space.

This sunspot had a south-north orientation in a region of the Sun where spots would normally be oriented north-south.

"We're near the end of Solar Cycle 23, which peaked way back in 2001," Hathaway said. Cycle 24 should begin "any time now," he said, adding that it might have begun on July 31.

The tiny, backward sunspot was at 13-degrees south latitude. Cycle-heralding sunspots are usually closer to the Sun's midsection, between 30 degrees North and 30 degrees South. So Hathaway is not certain the new cycle has begun. "But it looks promising," he said.

Another group of researchers today announced that the cycle had indeed begun. That team, using the Synoptic Optical Long-term Investigations of the Sun (SOLIS) facility built by the National Solar Observatory at Kitt Peak, Arizona, detected small magnetic eruptions near the Sun's poles that they say signal the new cycle's stars.

Storminess ahead

The peak of Cycle 23 was not particularly noteworthy, though a record-setting solar flare came as part of a string of storms struck our planet in November of 2003□actually well past the peak of the cycle.

Astronomers think Cycle 24 could be a strong one based on historical records and computer projections.

Enhanced activity means satellites and even power grids on Earth are at risk of electrical malfunction. Solar storms spew charged particles into space, and when they interact with Earth's protective magnetic field, electrical charges can dip into the lower atmosphere and even to the ground.

It will likely be many months and perhaps years before the new cycle builds steam and serious storminess ensues.

NASA plans later this month to launch a new pair of probes, called STEREO, to better monitor solar activity through the next cycle.

2496. from WU5E- a survey for hams in Iraq

Yahoo group: Temple_ARC
Date: 2006-08-21 15:17:55 UTC
From: James Kennedy
Topic: 2496 Message: 2496

1. How long have you been a ham? 14years

2. How are you able to fit ham radio into your duty schedule? Well I'm a contractor and I work 12 hours a day fixing sincgars and I dedicate 2 hours a day 2000-2200 hrs or that is the plan right now , still waiting on my yi9 call.

3. How long did you have to wait to get your YI9 license? so far 45 days

4. What do your buddies think about your hobby? well most of my buddies are ham radio operators, so the one thing I can add to that I'm a extra class but I hang out with just Techs and some Generals, most of the extra's are too busy doing there thing or chasing DX like I love to do.

5. What radio equipment did you bring on this deployment? IC-718, MFJ 4225 , 20m hamstick and 50 feet of rg-8x.

6. What radio's did I leave behind at the shack, TS-2000,V-8000, SB-200 40 foot tower with a hazer.

7. What do you think would speed up the process to get your Iraq ticket? do like the kuwaiti's do, charge $60.00 for a 1 year license, money makes anybody work faster.

8. Do you think we need a HF net for all the operators here in IRAQ - NO , or put a notice out don't talk about where you work at.

9. Have you ever operated outside the United States before, Yes Kuwait 2005, still getting cards to 9k2/w5ssg.

2498. RE: [Temple_ARC] Fwd: Bad corn year for Texas

Yahoo group: Temple_ARC
Date: 2006-08-21 23:23:17 UTC
From: Paul Finch
Topic: 2491 Message: 2498

Wil,

I wonder why that is? This is by far not the worse drought we have ever experienced in Texas. I remember back in the 80's Possum Kingdom Lake went down to over 25 feet below pool level Old timers from around the lake told me that they had seen it as low as 50' below pool level once (thank God)!

Could it be in the past they just tilled it back in the soil hoping that the following year would be better and the stubble would help fertilize the following years crop?

I have to admit I am not a Farmer, grew up with some good friends that were small time Farmers though.

In Texas I think we should be about used to these cycles in the crops and weather. Admitted, this year will go down as a hot one but probably only the 8th or 9th worse year for heat and rainfall. It could be a lot worse, it could the number one worse year!

Count our blessings, some of the lakes like Possum Kingdom are only a few feet low and the Summer is almost over.

Paul

This is the first year that I can remember that farmers are bailing the corn stuble. There are thousands of corn bales around the Mertens-Milford Tx area.

They plan on using the corn stubble in place of hay. It's been done in the past, when there was very little hay available.

you mean like a wall safe?:

"Message #2280 of 2501

Since moving into town the wife and I no longer have a need for the
wall safe. It is many years old but still works great. Has a
combination dial plus 2 keys.

Since I am scheduled for knee surgery next month I am now longer able
to move it, so the buyer must come and load itself himself.

First $100 bucks will buy it.

Hey, is that wall safe still available??

I need a good safe to lock those HT's in while I am on the road.

Ron,

Your correct, but isn't all those parts, part of Ham radio? <grin>

Wow, all the way from the Philippines! My Uncle was captured on Corregidor in WWII and spent 2 1/2 years in a prisoner of war camp there and two other locations on the Japanese mainland. Have you been there? Lot of sad stories came from that time. He went in the Marines at over 200 pounds and 6' 4" and came out of the camps at 150 pounds, sterile and 50 plus identifiable cigarette burn scars on his back. <Soapbox> That and beheading innocent people are atrocities, not taking pictures of naked prisoners. <Off> Sorry folks, guess I was just thinking about what's left of my family.

Hi Paul,

Thanks for the reply; yeah lots of things are part of Ham Radio, even a patient spouse!

I came to the Philippines as a visiting Rotary Professor for a one-year grant in 2000 after retiring at Southeastern Louisiana University. I taught in the Music Department for 19 yrs before moving over to manage KSLU, the public radio station for 14 yrs. Got my tech-plus then to become more familar with RF and technical apspects of radio. My engineer and I set up an emergency broadcast center with several ham radios and packet for use during hurricanes or other area emergencies. SELARC, the local ham club which I was member, both used that location there and forwarded field reports to it. Having an emergency center at KSLU was great and provided an important service to Hammond and surrounding communities.

Yes, the Philippines has a dark history. I did a lot of reading prior to coming, and much more reading and traveling since living here. The Bataan Death march has had many books written about it, some I have were written by those that had participated. Corregidor should be much more of a tourist destination, but has not be kept up as well as it should be. It still draws folks, but not as many as possible if better advertised and maintained. The Bataan Death march began in Bataan and went to San Fernanado, about 15 kilometers south of where I live. From there thousands were put in freight cars and carried to Cabanatuan, about 80 k north of here. Needless to say, hundred did not survive conditions in the crowded freight cars.

I opted to remain after the year grant of teaching at the University of the Philippines when 1) I found my retirement check goes much further here than it would in US, and 2) married a Filipino businesswoman I met in Rotary. We presently live on the former Clark Air Force base which is now a duty free manufacturing zone. Angeles City is very international with more than a thousand American AF personnel opting to stay here after the base closed during the Mt. Pinatubo volcano eruption. My present Rotary club has members from 8 countries....lots of Europeans have also moved here.

Yep, we live in tough times.....and the crimes we see in today's war zones have nothing to do with the Geneva Treaty, or other rules established humane treatment.

So that something in this post is related to ham radio, I offer the following:

1) It is very difficult for a foreigner to obtain a ham license. Possible, but difficult; usually requires a bribe to the correct official.
2) Most of the 2 meter repeaters closed down operation when the American forces pulled out of Clark Air Force and Subic Navy bases. The same for

ham clubs here.
3) Many of the Filipinos are very good HF operators, and have excellent rigs and some great shacks.
4) They use their equipment to communicate with Filipino OFW (Overseas Filipino Workers) found in US, Canada, Australia, New Zealand, Europe and the Mid-East.

Sorry for the long post guys, just wanted to let you know what a 'stranger' was doing on your list. Steve Bosshard and I were communicating via a Rotary listserv about amateur radio and told me about TARC. That and my old club (SELARC) have kept me in the ham loop.

Ron,

Your correct, but isn't all those parts, part of Ham radio? <grin>

Wow, all the way from the Philippines! My Uncle was captured on Corregidor in WWII and spent 2 1/2 years in a prisoner of war camp there and two other locations on the Japanese mainland. Have you been there? Lot of sad stories came from that time. He went in the Marines at over 200 pounds and 6' 4" and came out of the camps at 150 pounds, sterile and 50 plus identifiable cigarette burn scars on his back. <Soapbox> That and beheading innocent people are atrocities, not taking pictures of naked prisoners. <Off> Sorry folks, guess I was just thinking about what's left of my family.

From: Paul Finch
Topic: 2491 Message: 2510

Ron,

Wow again! I will say one other thing not related to Ham Radio. My Uncle was spared the Bataan Death march because he had appendicitis, the Japanese removed it through a 3/4 inch long incision. The one decent thing they did to him. I always wondered if they were experimenting with new procedures on the Americans, this one sure worked. The American Doctors did not know how they did it. My Uncle did end up in Cabanatuan and then on to the shipyards in Sacawina (probably misspelled) outside of Osaka (I think) where he was forced to help build a ship to be used against the American forces. I have no idea what the ships name was but when they launched it the ship sank almost immediately. Was was the Japanese thinking?

Wow again, repetitive ain't it! I am also a Rotary member in Azle, Texas. If you ever make it to Fort Worth, let me know and you can come visit.

My apologies in advance to the moderator and anyone else that did not like this reply,
Paul

2519. UHF Phasing Harness Notes

Yahoo group: Temple_ARC
Date: 2006-08-27 22:30:15 UTC
From: Charlie Schlieper
Topic: 2519 Message: 2519

For years I have been building my own phasing harnesses,
for stacking beam antennas. They either consist of-- odd 1/4-
wavelengths of RG-11/RG-59 coax, or precise equal lengths
of low-loss RG-8, joined into triple-female Tees (for quads).
Power dividers for 2m, 70cm, and 1.2 GHz also work well.

However, recently I discovered something through some rather
arduous experimentation, that might be of help to others. I
found that in cases where you are using very short phasing
lengths in UHF applications, 3/4-wavelengths or less, the
effects of the coax connectors used in a harness can affect
the results. I first called it "coax connector contamination."
Although the expression could be improved on engineering
wise, it sure gets the point across.

After several trials of building what "should have worked" but
didn't, I decided to eliminate the 3-female TEE, and two PL-259s
in the harness. (I usually use N-Connectors for UHF.) I put
both short lengths of RG-59 phasing line directly into the back
of a chassis-mount SO-239, and used a modified rear shield
adaptation.

This allowed the 50-ohm coax to be directly connected to the
harness, without extra PL-259s or a Tee connector. The results
were surprising! I got a perfect harness, zero reflected power,
and an SWR of 1:1 at the desired frequency.

My conclusion at this point is as follows:
When multiple quarter-wavelengths (7 to 9 typical) are
used for phasing harnesses at VHF and lower frequencies,
the effects of quality coaxial connectors and Tees seem to
be minimal; however, when using very short lengths at UHF
and higher frequencies, even small contaminations can
make a difference in achieving perfection.

Enjoy Ham Radio!
N5TD

I know , this but I was hoping that one the VE's would contract the the YL husband w5mik and setup the test.

IF you read the e-mail I forwarded W5MIK did look up the process ,but since listed at the closest VE to Lampassa , but I'm in Iraq and I was hoping that one of the VE at the Temple ARC would take the ball and hit a 3 pointer.

thanks
Jim

RedCross/ W5TSG Emergency Net Drill

August 30 W5TSG EMERGENCY NET ON NEW REPEATER !
This evening, Weds. 30 August, the W5TSG net will be held on the 145.310 repeater. The tone is 123 and a - shift. We will start at 7:30 and run as long as it takes to cover the largest area. We invite all HAMs to participate in this drill.
The purpose is to determine the footprint for use by the Red Cross and other emergency groups as well.
We will not have training this evening but will attempt to take comments if possible

Clear DayThis is not ham radio, but does deal with emergency restoration of communications circuits. Maybe Icom's DSTAR could provide a similar backup? Steve NU5D

FOR IMMEDIATE RELEASE FOR MORE INFORMATION CONTACT:

8-30-2006 Mr. Art Sanders

Phone (979) 820-5590

Email: artsanders@...

Brenham EOC Installs Satellite Communications System

Brenham, TX – in August, 2006 the Brenham Emergency Operations Center (EOC) completed installation of a satellite communications system paid for jointly by the City of Brenham, Washington County and Brenham ISD. The satellite system will be used to back up emergency phone and internet connections. During installation EOC employees received FCC certified satellite installation training.

During the Katrina disaster in Louisiana and Mississippi, emergency phone and internet communications were among of the first services to go down and one of the last to be restored after the storm. With the new satellite system, installed by PAUnet, LLC of College Station TX, Brenham EOC employees will be able to communicate with the outside world even if all land based systems have been destroyed.

The satellite system can also connect radio gateway devises used to provide interoperability for public safety two way radio systems.

2529. Batteries for Communications Purposes

Yahoo group: Temple_ARC
Date: 2006-09-04 05:40:32 UTC
From: WR1TX
Topic: 2529 Message: 2529

I may have brought this up before, and this might be an off-topic subject in some circles, but here goes:

Where can I find a reliable deep cycle or gel cell battery (or batteries) in Central Texas for communications purposes whether it be for transmitting or receiving? The same question goes for chargers for these batteries.

Any help would be appreciated; the info gathered will be applied toward my portable and possibly bicycle mobile applications.

2530. Communications Batteries Clarification

Yahoo group: Temple_ARC
Date: 2006-09-04 06:10:28 UTC
From: WR1TX
Topic: 2530 Message: 2530

As a addendum to my original questions about deep cycle and gel cell batteries and chargers for them, I should state that the batteries will be used for HF purposes (5-100 watts output) and VHF-UHF purposes (50/35 watt output high, 5 watts low).

I hope that clarifies my original questions.

2531. Re: [Temple_ARC] Batteries for Communications Purposes

Yahoo group: Temple_ARC
Date: 2006-09-04 21:26:33 UTC
From: Charlie Schlieper
Topic: 2529 Message: 2531

I use deep-cycle marine batteries which are about the size of a car battery. One, that powers my station for automatic switching backup, is a larger type (one of the biggest I could find). It was also very heavy for it's size. I have purchased these locally, and SAMS club was the last source.

I get gel-cel batteries at different sources, and even one local source here (L&M) turned out to have good prices on these items. I did a comparison one time on what the mail-order cost would be, versus local purchase, and believe it or not--- buying them locally was a few dollars cheaper. However, that was just a one-time case. (Usually, you can always find some mail-order source on the internet that is cheaper than a local price, if you're willing to wait a few days.)

I use a "Smart Charger" for recharging all my lead-acid batteries, including Gel-Cel types. It is called an "ACCUMATE." I think it cost around $59.00, but was really worth it. Using the accumate is a safe, simple way to keep all lead-acid batteries charged and conditioned, even smaller GelCels.

73,
Charlie

Thanks for the ideas, Charlie. Where did you get the Accumate?

Warren, WR1TX

Charlie Schlieper <n5td@...> wrote:
I use deep-cycle marine batteries which are about the size of a
car battery. One, that powers my station for automatic switching
backup, is a larger type (one of the biggest I could find). It was
also very heavy for it's size. I have purchased these locally, and
SAMS club was the last source.

I get gel-cel batteries at different sources, and even one local source
here (L&M) turned out to have good prices on these items. I did a
comparison one time on what the mail-order cost would be, versus
local purchase, and believe it or not--- buying them locally was a few
dollars cheaper. However, that was just a one-time case. (Usually,
you can always find some mail-order source on the internet that is
cheaper than a local price, if you're willing to wait a few days.)

I use a "Smart Charger" for recharging all my lead-acid batteries,
including Gel-Cel types. It is called an "ACCUMATE." I think it
cost around $59.00, but was really worth it. Using the accumate
is a safe, simple way to keep all lead-acid batteries charged and
conditioned, even smaller GelCels.

I may have brought this up before, and this might be an off-topic subject in some circles, but here goes:

Where can I find a reliable deep cycle or gel cell battery (or batteries) in Central Texas for communications purposes whether it be for transmitting or receiving? The same question goes for chargers for these batteries.

Any help would be appreciated; the info gathered will be applied toward my portable and possibly bicycle mobile applications.

Clear DayFirst Satellite contact this morning with W7JPI and K5AOK. AO-51 2M in, 432 Out FM Satellite Repeater.

My satellite station consists of 3, M2 antennas, a CP (circularly polarized) 14, 2M antenna, (7 E plane and 7 H plane elements RH polarity), a 436CP30, 432 Antenna (15 E and 15 H elements) plus a 23CM35A, 35 Element 1296 Mhz Horizontal (N5NIR needs on of these) Antenna. The antennas are mounted on a 40 ft self supporting Rohn 25 G tower, anchored to limestone with 4, 5/8" X 10 all thread bolts in an epoxy made for concrete anchoring. The antennas are mounted on a 10 Ft fiberglass cross arm. The rotator is a Yeasu G-5500 with the elevation rotor mounted half way up the mast on a home made bracket. In place of a thrust bearing, I am using a 2"X4" wolmanized painted wooden block. The 2M and 432 antennas run through Times RG331, 1/2" aluminum cable with type N connectors, and the 1296 cable is 7/8" Cablewave Systems. The cables run underground 70 ft in a 3" PVC conduit to the shack. Jumpers are made from Andrew 1/2" superflex. The radio is a Kenwood TS2000X with a home brew computer running SatPc32 software to control the rotor and radio, and track the satellite.

This has been a real learning experience. 73,

Steve in the Box at Gatesville, Texas

Clear Day
John Kirckof <Jmkkek@...> to amateur_radio
More options 12:28 pm (12 minutes ago)

We need your help!

Right now IHS (International Health Services)
http://www.ihsofmn.org/ is in dire need of radio operators, medical folks, Spanish translators,
and others to go on a 2 week medical mission trip to Honduras. It is a large undertaking with about 10 teams planned to go at the same time for the 16 Feb to 4 March, 2007 trip. It will have medical and dental clinic teams plus several eye glasses and surgical teams planned. This means about 100 people will go counting all the support and worker people who go also (many spouses and friends go in this way). We have done this for 25 years so we have all the logistics planned out to include a container shipment to send supplies, meds, and personal items ahead of time.

The radio operator duties will vary some depending on the team we are giving radio support to. In all locations we will have HF voice capability with a check in net 2 or 3 times a day. Some of the 10 or so locations will also have 2 meter ops… often using a repeater. Also, many of the locations may have e-mail capability through the HF Winlink system. So, whatever your skill level, we likely can have you as a lead person on a team or a support person to help them and do Engineer tasks. We will have a “training” session in about mearly or mid December for those who what to brush up their skill on any of the above modes so we do not go unprepared. We (IHS) also do have some gear to help out in items that you may be lacking. We have a storage location in Honduras where we keep a lot of items such as antennas, generators, etc. We also send a container shipment that leaves late December so all our supplies, meds, team food, and any gear and personal items you have can get to Honduras that way.

How many teams of each type we will have totally depends on how many people sign up and what their profession is. We do the sign up early so that a small group can go to Honduras the end of October and line up the team locations based on who has signed up. We want to get applications by 1 October to do this so call me ASAP if interested. We have had a fairly good turn out so far for docs and nurses, and most medical folks. However, I only know of a couple radio people signed up. Our purpose is to go to the poor remote locations of Honduras where there are no medical or dental services for the local people. It would be a sad thing if a team did not go to a very needy village simply because we

lacked a radio person to complete a team.

FYI, our typical clinic team will have one or two docs, an RN and one other nurse or EMT, a pharmacist, a dentist (usually), one or two Spanish translators, an engineer, one or two radio operators, and several helpers. It is a wel rounded team and this also helps when a spouse or friend wants to be on the same team (note our application has a place to note your desire to be on a team with some one else). A parent can take a MATURE son or daughter also if they are able to be a productive member of the team.

I have a CD plus a lot of other information I can pass on to you if you or someone you know has a sincere interest in going! All I need is an address. Also, there are several other IHS Directors who can answer more technical questions about the medical side of things, etc. So let me know if you have questions in that regard, as well. Note that the CD is also good for those signed up as it has a lot of photos & info about most of the sites we go to. This includes radio set up info from the past.

Call me any time or write back. A call is best so I can fill you in on basic expenses and the variety of work conditions we encounter. Ph 320-634-4386 Note that I will be away from my phone from noon Saturday, 9 September until about 16 September. I will check my e-mail once in a while but Karen and I will be travelling so no promises on how often.

I and the needy of Honduras thank you for your interest in this very rewarding work!

Best regards,

John Kirckof
KB0UUP
JMKKEK@...
Phone: 320-634-4386
IHS Comm Director
http://www.ihsofmn.org/

PS Our most dire need is for Spanish translators. If you can help us find one or two, I will buy you a Grape Uba when we get to LaCeiba !

I hate to burst your bubble, but that picture is at least two years old. I've seen that exact same photo before, going back to at least 2004 if not before then. I posted this same picture on an old website I had set up in that year; to be honest, it may have been before 2004.

I don't know know where you got the pic (it IS spectacular, to be honest) but I think that you have been given an incorrect date as to when the photo was actually taken.

Warren, WR1TX

DE K8DY

Awesome.... night time photo of Lightning and Tornado. This is a spectacular "Night" picture of the Tornado that went thru portions of Sedalia, MO on March 10, 2006. If it hadn't been for the lightning at the same time as the pic was shot, you would never have seen the massive tornado funnel already on the ground. When you hear a night time tornado warning for your area, take cover because most of the time you will never see it coming.

This won't happen again for a long, long time.

2546. Balloon Lauch near Wharton OFF THE GROUND

Yahoo group: Temple_ARC

From: n5ytt
Topic: 2553 Message: 2553

I have many QST magazines probably about 2-3 years worth. Don't know
if there is a club / group or school call that may like to look
through them. Maybe even available to give out at VEC Testing...
Anyone instersted please email me to arrange pickup... if not
will put them in the vertical filing cabinet.

2559. New Responsibility in MARS

Yahoo group: Temple_ARC
Date: 2006-09-14 01:35:02 UTC
From: Charlie Schlieper
Topic: 2559 Message: 2559

A quick NOTE about MARS:

It seems that the Army, Air Force, Navy and Marine MARS folks
will soon work towards supporting a "New Responsibility in MARS."
The chief of Army MARS recently reported that both MARS and the
TSA, (Transportation Security Administration), have entered into an
MOU (Memorandum of Understanding), whereby MARS will provide
support for the TSA with backup communications during the initial
72 hours of certain types of incidents involving mass transit, pipelines,
or aircraft.

2572. Msg Dupe Problem

Yahoo group: Temple_ARC
Date: 2006-09-19 04:11:13 UTC
From: Charlie Schlieper
Topic: 2572 Message: 2572

The dupe earlier was the result of me not receiving anything from the TARC reflector, which is still the case! Just what the problem is this time is still a mystery. I am not showing a "blocked status" on the main Yahoo site, as has been the case a few times in the past. I will continue to study the problem to see why I am still not receiving any messages sent by anyone via the TARC reflector.

From: Steven Samuel Bosshard (NU5D)
Topic: 2574 Message: 2574
Attachments: 1 described; binary payloads are missing from this source WARC

Clear DayHad a little spare time this evening and loaded up on 60 Meters with the 160M loop and Palstar AT4K. Found several stations on 5.3305USB and worked into MO and KS with 35watts PEP (didn't know it would throttle back that far). Anyhow, loaded the first 5 memories with the 5, 60 M frequencies (see http://www.arrl.org/FandES/field/regulations/faq-60.html#two) for rules - looks like this may be a nice band with nice characteristics. My radio will not send a carrier or any mode other than USB on these frequencies, and will not transmit out of band - built in protection - sure inconvenient to tune the antenna, though - glad I have an MFJ analyser handy.

From: WR1TX
Topic: 2574 Message: 2575

60 meters can be interesting. Some time back, I managed some contacts with some East Coast stations, mostly NC and VA. All I used was a G5RV at 30 feet, running the legal limit of 50 watts on those frequenices with my trusty Alinco DX-70TH and MFJ-949E tuner.

If the band is open enough, you can get a few good contacts; you just have to give it a shot.

Warren, WR1TX

Thought I'd share my transmitter hunting "car mount setup" that
Kay and I have been using lately to tracking down the TONE
interference on 146.82.

It's a very secure setup with two black steel bands across the side
of the mount. They may not show up too well in this picture, as it
was near dark.

Hopefully, with what we found and did this afternoon, the interference
to 146.82 will stop.

Enjoy Ham Radio!

Hi guys. Long time, no speak. I recognize this picture...and have seen it a bit over the past 14ish years. There was a man trying to sell pictures of this supposed "nighttime waterspout over Lake Okeechobee image" for 5 dollars a pop while I was in college at Florida State University in the early 1990s. It was a nice image, but we passed. Soon afterwards, I started seeing it on the internet in 1993 and 1994. It's been popping up here and there ever since.

Two old Tom Cats

This is how Charlie works out daily, and keeps physically fit to climb his tower. Charlie is very active, as the picture illustrates, along with his cat. He sits and thinks, but sometimes just sits. He's probably dreaming about lifting the weights that are shown in the background?

So if you're a ham, don't forget to exercise!

Two old Tom Cats

This is how Charlie works out daily, and keeps physically fit to climb his tower. Charlie is very active, as the picture illustrates, along with his cat. He sits and thinks, but sometimes just sits. He's probably dreaming about lifting the weights that are shown in the background?

So if you're a ham, don't forget to exercise!

2586. ARRL and W5YI VE Certification

Yahoo group: Temple_ARC
Date: 2006-09-22 06:37:14 UTC
From: WR1TX
Topic: 2586 Message: 2586

I have now begun working toward my VE certification with both the ARRL and W5YI. I hope to have both of these completed for sure before Thanksgiving.

I'm doing this to fulfill a promise I made to N5UJ of Austin, W6LUY of Livingston, and W5HMN of Georgetown. These VEs were at the exam session at Austin Summerfest on August 5 when I earned my Extra, and I told them while I was there that I would work to get my VE certification. Now I've started the process, and I hope to help VE teams around the area that might need an extra VE for a test session or two. Also, I don't want to let the aforementioned hams down by not following through on my promise!

It's just one way I want to give back to the hobby that's given me so much over the last 15 years.

2588. Re: 60 Meters

Yahoo group: Temple_ARC
Date: 2006-09-20 12:42:55 UTC
From: ke5c
Topic: 2574 Message: 2588

> My radio will not send a carrier or any mode other than USB on these
> frequencies, and will not transmit out of band - built in protection -
> sure inconvenient to tune the antenna, though - glad I have an MFJ
> analyser handy.

these are good points: 60 meters does require some changes in typical operating practice. usb is the only modulation allowed, so you can't throw out a carrier to tune. even if you could, you might have trouble finding a clear frequency that you wouldn't qrm by throwing out a carrier since you only have five choices. to tune the antenna legally, you really do need an antenna analyzer. if you had a tube type rig, you would need a dummy load to tune it. you have to operate on 60 like we probably should on all bands ...

Hi Mike,

Sorry, but the information is not available at this time.
I can tell you, however, that it was a person who knew what
they were doing, and is somewhat talented in using computer
and data-related skills.

Hope the Army is treating you well. Come over and
visit us when you can.

73,
Charlie

2590. Reply vs Reply All

Yahoo group: Temple_ARC
Date: 2006-09-22 17:11:10 UTC
From: Charlie Schlieper
Topic: 2590 Message: 2590

My appologies for sending a "personal response" to everyone
on the TARC Reflector. I somehow must have either chosen
"REPLY ALL," or-- the "REPLY" from a message sent to the
reflector works that way.

I will try to choose the senders e-mail preferences to cut down
on unnecessary distribution.

73,
Charlie

2592. Texas QSO Party Synopsis

Yahoo group: Temple_ARC
Date: 2006-09-22 17:59:08 UTC
From: ke5c
Topic: 2592 Message: 2592

Getting on and making a few contacts to support our state's QSO party is pretty easy. Here are the basics:

- 9 AM to 9 PM this Saturday and 9 AM to 3 PM this Sunday

- 444, 144, 50, 28, 21, 14, 7, and 3 mhz. Most of the activity will be on 14 and 7 mhz with some on 144 and 15 mhz, and, if the band were to open, on 50 mhz. However, for the casual listener, focus on 14 and 7 mhz, 145.52 simplex.

- You send RS/T and your county's abbreviation which you can find here - http://www.txqp.org/forms/TX_county_abbrevs.txt

- Non Texas stations will send RS/T and State, Country, Canadian Province, or maritime region.

- suggested CW frequencies are 40 to 60 kHz up from the bottom of the band.

- suggested PHONE frequencies are 25 kHz up in General segments and 28.300 - 28.500

A number of stations are doing mobile expeditions in order to try to put all Texas counties on the air sometime during the event, so especially listen for and work mobiles. The mobiles will be on 40 meters some even during the daytime hours looking for Texas counties.

Clear DayAustin SwapNet 09/24/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Delta Loop Group,

A welcome change of weather in the form of a few cool fronts has announced the beginning of Fall weather. Severe weather season started a few months ago but not very much of it here.

Jerry N5UJ has taken on the RACES District Radio Officership. He is looking for potential new RACES members and Austin area Hams that were in RACES in the past. For membership, a DEM-6 form must be filled out. DEM website: www.txdps.state.tx.us/dem/pages/downloadableforms.htm#radio
If you'd like more info on RACES, contact Jerry N5UJ@....

Sept 26 TCARES meeting 4th Tue ARL 10,000 Burnet unless otherwise advised
Note- members of Texas State Guard will attend this TCARES meeting!

Oct 3 AARC biz mtg 1st Tue 7PM- Mangia's at Burnet/Gracy Farms
Come join us for dinner at ~6PM and be ready for the biz meeting at 7PM
Topic- Thomas NX1N- Software "Brain"

Oct 10 "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
(Pizza $1/slice, drinks 50c or bring your own snack)
Topic- Shane KE5HSS- Gibson Ridge WX Software and Storm Chasing

Oct 17 AARC Officer's Meeting 3rd Tue 6PM- Mangia's at Burnet/Gracy Farms

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other things AARC is up to, please join us and get involved!!

AARC dues can now be paid online! It's now easier than ever to renew and/or join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Jeff N5MNW@... or Jerry N5UJ@... for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store, tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter. It might not help, but it couldn't hurt!

2597. Ham Expo information

Yahoo group: Temple_ARC
Date: 2006-09-28 02:06:32 UTC
From: Myron Mesecke
Topic: 2597 Message: 2597

Just a couple of items I want to pass on to everyone.

VE testing will not be offered during this upcoming Ham Expo. Perhaps testing can be brought back at the Spring Expo.

Mike LeFan WA5EQQ announced that there will be a new vendor at Ham Expo. Memphis Amateur Radio from Tennessee. I think this is great news. Let's all try to make them feel welcome and make their trip worthwhile.

And we are always looking for volunteers to work and make Ham Expo a success.

Myron,

I am willing to work again this time as I did last time at the front desk. Also, even though my wife, Elizabeth (KE5KLU), was not mentioned in the TARC bulletin as one of the newest HAM Techs in Temple, along with Steve Stickley, KE5KLV, my Marine Corps Radioman buddy as the other new Tech in Temple, they have both indicated to me that they may be willing to help in October and may even consider joining TARC. What a deal...new blood to help out in our on-going projects... Let's get 'em now.

Hang in there Myron...communications is the key to all success.

73
Mike
WB5PBS
PS - Although it may not be important to any other HAM than me, I also tested and advanced to Extra class two weeks ago.

Lots of new NEWS...

73
Mike

Myron,

Is there some particular reason that I had to go to Clifton, Texas this past year to do all of my testing for Tech Plus, General and Extra, when we have VE volunteers here in the Temple/Belton area to do the same? It cost me a bunch of gas to pursue my hobby but I feel it really wasn't necessary to drive, round trip, all those times to do this. Please correct me if I am wrong. If we have or have had a veteran VE Coordinator here in Temple or a new one to do the same here, why do we, as the TARC Radio Club, have to rely on outside Radio Club sources from the Fort Worth area (W5YI) or other testing facilities to "conduct " our VE testing? I'm a new guy in the neighborhood...please bear with me but I am also an ARRL VE and would help in this capacity. If TARC has had VE's in place over the past years and it has worked, why haven't they been asked to continue on in the same capacity? We can take care of our own but why don't we?

73... And, you have done a great job this past year from a rookies point of view...

PLease reconsider the VE testing.I work midnight shift in Law Enforcement and took vacation time for the Ham Expo and also to take the written General test, due to the fact the web site said VE testing at the Ham Expo. I will not have the time again to take the test untill sometime after January. I ask that you please give a second thought about testing.

From: RENE MILLER
Topic: 2597 Message: 2602

I normally don't respond to any of the postings, HOWEVER, I feel I need to put my two cents in on this!

As long as I have been a HAM radio operator and even before I became one, there has ALWAYS been testing available to those interested in getting their ticket at the HAM Expo. I have even informed those that are interested in the hobby about HAM Expo and the opportunity for testing. You know, PROMOTE HAM RADIO, PROMOTE THE HOBBY !!! I do this every opportunity I can and encourage those interested to getting their ticket. As a matter of fact, my fiancee' scheduled his time off to coordinate with the HAM Expo just to test not to mention my brother. Then I get the email yesterday stating there will be no testing available this year!!! This would be the ONE AND ONLY time my fiancee' would be able to test due to his work schedule. My brother can test any time because of his flexible work schedule.

I agree with Mr. Harmon and I'm sure others, I hope that you as a club will reconsider this and have the testing available. One thing to consider for the next HAM Expo ... if there will not be testing available, do not promote it will be available, this is very misleading, not to mention probably will hurt the attendance of future HAM Expo's. Keep in mind, you have several HAM radio operators who travel from out of town and EVEN out of state JUST to attend the HAM Expo AND test. Word of mouth can cause more harm than anything.

This may very well be my last HAM Expo to attend in the Central Texas area due to my pending relocation and I would like to see it continue on as a success and not a misleading event.

Respectfully,
Rene' Miller / KD5NEV

Thanks for the information Steve. As you point out, it takes a fair amount of planning and preparation to carry off a VEC session.

As opposed to last year, when we were unaware of all the pre-planning required, the board was well aware of the need to start the process well in advance of the fest. For this reason, Myron began raising the issue of the need for a person to lead the effort months in advance. This was done at more than one club meeting. In addition, we contacted a number of folks to attempt to find a leader for the effort. In this case, we had ample number of VEC's, but no one to step up to lead the effort. Without such leadership, the careful planning steps you outline would not have been in place. As you rightly point out, by now it is too late.

I thank you for your past efforts in this area and hope that someone in the club will pick up the baton in the future.

I hear a lots of phone folks using Q signals, HI HI...

AMATEUR RADIO "Q-SIGNALS"
FOR CW USE ONLY

QNA Answer in prearranged order.
QNC All net stations copy.
QND Net is directed.
QNE Entire net stand by.
QNF Net is free.
QNG Take over as net control station.
QNI Net stations report in.
QNM You are QRMing the net.
QNN Net control station is [call sign].
QNO Station is leaving the net.
QNP Unable to copy you.
QNS Following stations are in the net.
QNT I request permission to leave the net.
QNU The net has traffic for you.
QNX You are excused from the net
QNY Shift to another frequency.
QNZ Zero beat your signal with mine.
QRG Will you tell me my exact frequency?
QRH Does my frequency vary?
QRJ Are you receiving me badly?
QRK What is the intelligibility of my signals?
QRL Are you busy?
QRM Is my transmission being interfered with?
QRN Are you troubled by static?
QRO Shall I increase power?
QRP Shall I decrease power?
QRQ Shall I send faster?
QRS Shall I send more slowly?
QRT Shall I stop sending?
QRU Have you anything for me?
QRV Are you ready?
QRX When will you call me again?
QRY What is my turn?
QRZ Who is calling me?
QSA What is the strength of my signals?
QSB Are my signals fading?
QSD Is my keying defective?
QSG Shall I send messages?
QSK Can you hear between your signals?
QSL Can you acknowledge receipt?

QSM Shall I repeat the last message?
QSN Did you hear me?
QSO Can you communicate with me?
QSP Will you relay?
QST General call preceding a message.
QSU Shall I send or reply on this frequency?
QSW Will you send on this frequency?
QSX Will you listen?
QSY Shall I change frequency?
QSZ Shall I send each word more than once?
QTA Shall I cancel message?
QTB Do you agree with my counting of words?
QTC How many messages have you to send?
QTH What is your location?
QTR What is the correct time?

TARC's leadership is in good hands. It's really time for the followers and non-members who complain to start asking what they can do for TARC instead of what TARC can do for them. Ham Fest on October 7 would be a good time to start - email Mike LeFan and tell him what you can do for a few hours: hamexpo@...

[From the The ARRL Letter Vol. 25, No. 38 September 22, 2006]

Just two days after hosting the ARRL Western Pennsylvania Section Convention September 10, the Butler County Amateur Radio Association (BCARA) voted to throw in the towel and get out of the hamfest business. The main reason, cited in the September issue of the club's Tell-A-Ham newsletter, is a lack of member involvement.

"The few, dependable workers have burned out," wrote BCARA Treasurer Kevin Berry, KF4RMA, who edits the newsletter and took on tasks this year as hamfest vendor chairman, parking chairman, treasurer and flyer preparation, among others. According to the newsletter, fewer that one-quarter of the club's 80 members pitched in to make the hamfest happen this year, and nearly all handled multiple duties during the event.

Clear DayAustin SwapNet 10/02/06 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Solar Wind Talkers,

Lori and I spent a good part of the weekend attending the "Rattler Roundup",
an annual reunion of San Marcos High School grads. At the San Marcos/Anderson
football game, Troy KE5BCK Kimmel ('76) was recognized as one of the notable
grads. BTW, the Rattlers soundly defeated Anderson in the Homecoming game...
Saturday, there was a Gala event with Chili cookoff & music in the park and
a dinner party at the Activity Center that night. On Sunday, we attended
church with my Mom & Dad and I took some more golf lessons from Dad.

Look for upcoming Packet training sessions for TCARES. If you are interested in
attending, keep an eye on www.tcares.org and/or contact Roger W5WIA@....

We hope to see many of you at Belton this weekend!

Oct 3 AARC biz mtg 1st Tue 7PM- Mangia's at Burnet/Gracy Farms
Come join us for dinner at ~6PM and be ready for the biz meeting at 7PM
Topic- Thomas NX1N- Software "Brain"

Oct 10 "Hands-On-Hamming" 2nd Tue 7PM- ARL 10,000 Burnet Rd
(Pizza $1/slice, drinks 50c or bring your own snack)
Topic- Shane KE5HSS- Gibson Ridge WX Software and Storm Chasing

Oct 17 AARC Officer's Meeting 3rd Tue 6PM- Mangia's at Burnet/Gracy Farms

Oct 24 TCARES meeting 4th Tue ARL 10,000 Burnet unless otherwise advised

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other
things AARC is up to, please join us and get involved!!

AARC dues can now be paid online! It's now easier than ever to renew and/or
join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail
it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues
if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Jeff N5MNW@... or Jerry N5UJ@... for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store,
tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter.
It might not help, but it couldn't hurt!

ARRL Exams 1st Sat 9AM Joe N5SMN 832-0450 / Joe W5HS 345-0800
LCRA facility 3700 Lake Austin Blvd-
Exit MoPac (Loop 1) at the Enfield Road exit ramp and turn west onto Enfield Road. Continue along until Enfield Road ends in a T-Junction and turn left onto Lake Austin Boulevard. Immediately turn left again into the first driveway. It is labeled " Oyster Landing - Additional Parking ". Go up the drive to the fishing boat and turn right into that parking area. Turn right again and go down to the west end of the lot and park near the stone building that looks like a cafe.
Come inside and go back to the meeting room at the north end of the building.
That is where you will be registering for the exam and taking the test.

2615. Jamboree on the Air Oct 21

Yahoo group: Temple_ARC
Date: 2006-10-02 16:01:15 UTC
From: Ed Underwood
Topic: 2615 Message: 2615
Attachments: 1 described; binary payloads are missing from this source WARC

TARC,

We have again been invited by the local Scouts to participate with them in the annual Jamboree on the Air (JOTA), an ARRL-Scout event to show these young folk the pleasures, advantages, and benefits of ham radio. Our invitation is for 4 PM for 1 ½ hours or so on Saturday, Oct 21, 2006, at Camp Live Oak in Copperas Cove. I realize that this is more distant by 15 to 20 minutes than the location the scouts had last year, but they were unable to get that park and had to settle for this one. More details on the location and directions will be available later.

Here is a clip from http://www.arrl.org/FandES/ead/ideas.html on JOTA:

JOTA 2006 Information

More <http://www.arrl.org/FandES/ead/#scout> information about ham radio and scouting

Who: Girl and Boy Scouts around the world

Where: Wherever you set up your radio!

When: October 21-22 (The JOTA begins on Saturday, at 0001 hours local time, and ends on Sunday, at 2359 hours local time.)

Scout Frequencies for JOTA 2006

band

phone (MHz)

28.390

28.190

(3.740 MHz
not used in US)

The ARRL suggests using 7.270 as the US JOTA frequency.

JOTA 2006 Possibilities

We have received a few comments referring to the possibility of using more SSTV during JOTA. Wouldn't it be great to send a picture of your girl and boy scouts to the troop they are talking with? These pictures would be a great addition to a scout scrapbook.

Demonstrate a simple 2-meter HT and mobile rig. It is much easier for scouts to see themselves owning this type of radio as opposed the "top of the line" radios. Remember to show both the scouts and leaders how ham radio will compliment the scout program. With a little guidance, a girl or Boy Scout leader will be able to work ham radio into several badges such as electricity, communications, and, of course, radio.

This is also an opportunity to discuss the value of a 2 meter HT while on a hike or field trip. I know from passed experience that scouts want to go at their own pace especially on a hike. With a few licensed ham/scouts in the group everyone will be able to keep in contact.

Martha, NU5R, and I plan to run a portable 20 M phone station there as we have done for the past few years. Charlie Schlieper plans to operate another HF portable station. One of y□all□s fine mobile installations would make a great demo, in addition to 2 M HT and repeater operation. Your ideas

and participation are heartily invited. The scout leader will provide 110 VAC for us. This is a great opportunity to introduce some folk younger than we are to ham radio. Please let me hear from you.

73, Ed W5LQ

(3.740 MHz
not used in US)

The ARRL suggests using 7.270 as the US JOTA frequency.

JOTA 2006 Possibilities

We have received a few comments referring to the possibility of using more SSTV during JOTA. Wouldn't it be great to send a picture of your girl and boy scouts to the troop they are talking with? These pictures would be a great addition to a scout scrapbook.

Demonstrate a simple 2-meter HT and mobile rig. It is much easier for scouts to see themselves owning this type of radio as opposed the "top of the line" radios. Remember to show both the scouts and leaders how ham radio will compliment the scout program. With a little guidance, a girl or Boy Scout leader will be able to work ham radio into several badges such as electricity, communications, and, of course, radio.

This is also an opportunity to discuss the value of a 2 meter HT while on a hike or field trip. I know from passed experience that scouts want to go at their own pace especially on a hike. With a few licensed ham/scouts in the group everyone will be able to keep in contact.

Martha, NU5R, and I plan to run a portable 20 M phone station there as we have done for the past few years. Charlie Schlieper plans to operate another HF portable station. One of y□all□s fine mobile installations would make a great demo, in addition to 2 M HT and repeater operation. Your ideas and participation are heartily invited. The scout leader will provide 110 VAC for us. This is a great opportunity to introduce some folk younger than

we are to ham radio. Please let me hear from you.

73, Ed W5LQ

From: Tom
Topic: 2621 Message: 2621

TARC

Should be a great HamExpo weekned! Last year a lot of folks traveling from Houston, Tyler and other parts of East Texas were preoccupied with more urgent matters and sadly didn't make it to Belton.

Also,if I remember right, last year gas was going for almost $3.00 a gallon. I just picked some up for $2.06 a gallon over in Harker Heights and the prices seem to be running under $2:20 per gallon most everywhere else. Hopefully we will have a real nice busy Belton HamExpo gathering this weekend. Might need some extra help from TARC members, I'm thinkin.

See everyone at HamExpo!

| All,
| This has been forwared a few times, the latest by Thomas NX1N but this
| is a first for me! An EME demo at Belton!
|
| Jeff N5MNW
|
|
|
|
| Hello NTMS (...and SwapNet list... -mnw)
|
| In addition to speaking at the Belton hamfest this Saturday, Paul WA5WCP
| will have his portable 1296 MHz EME setup up and running at the
| fleamarket. He hopes to be setup Friday night for moon rise. Moon set is
| just about the time the fleamarket opens so plan to check out Paul at
| 6AM before the fleamarket begins and you can hear some echoes and hear
| Paul work some stations.
|
| Here are Paul's plans.
|
| 73
| Al W5LUA
|
|
|
| I am planning a quick portable operation at one of the local ham fests..
|
| the Ham Expo at Belton as part of a presentation and demo on 7 Oct 2006.
|
| If everything goes as planned, I will be on the moon on 23cm at moon
| rise about (00:00Z 7 Oct) or (7pm Friday 6 Oct lcl) from grid EM11GA
| in Belton Tx.. 31.03N 97.48W around 1296.035 plus / minus any noise. I
| will also tune the low end looking for any stations.
|
| I will work random contacts during the EU window and any other US till
| the activity is gone and then also if local horizon allows, the western
| window till moon set (12:40Z). I plan to leave the station assembled
| for inspection by guys at the hamfest till PM lcl.
|

| This location is only about 2 hrs from my home, and hopefully this is
| the first of a continueing "weekend EMExpedition series" to activate
| more grid squares and stimulate interest in EME.
|
| I would appreciate any stations helping with the demo, particularily
| after 11:00Z.
|
| Thanks and 73 de

[Yahoo reminders are not working properly but you may also receive the automated reminder.]

LOCATION: Church of Christ in Western Hills -- 210 N. General Bruce Drive -- Temple, TX (on west side of I-35 across from Starbucks Coffee).

"The Virtual Workbench" is the subject of our September program. Darwin Geiselbrect, K5DOA, will give us a look at some free, computer-based software tools for design and instrumentation in Amateur Radio. In other words, he will show you how to turn your computer into a virtual workbench. Come see what Darwin has up his sleeve.

Ham Expo final planning will follow. Please attend if you can.

As I understand, the program tonight is "show and tell". So if you have something new to share with the group, bring it along and have your 5 minutes of fame. You don't have to have hardware in hand. If you have done something the group would be interested in, discuss that also. I think Myron said most of the rest of the meeting would be devoted to last minute planning for the Expo. 73 - Darwin K5DOA

2634. What makes a VE Team?

Yahoo group: Temple_ARC
Date: 2006-10-06 20:34:55 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 2634 Message: 2634
Attachments: 2 described; binary payloads are missing from this source WARC

Clear DayRecent discussion about VE Testing has led to some questions about whether everyone participating much be an accredited VE. The excerpt from the ARRL VE Manual below might answer some questions.

From the VE Manual.

VE Team Contact Person. The person who fills this high-profile position is the VE program's local contact with the general public, ham and nonham. He or she is responsible for handling the myriad of questions that candidates will raise before the test session. Most questions tend to be fairly routine, such as, "What time is the session scheduled to begin?" "How do I get to the test site?" or "When is your next session?" The Contact Person also would typically accept Form 605 applications and test fees from those candidates who preregister. Anyone, accredited or not, is eligible to serve as the Contact Person for your team. Although not legally required to do so, many teams prefer to assign the task to a licensed radio amateur who is familiar with licensing requirements, testing procedures and the Amateur Radio service in general. Your team's choice is important--the Contact Person is your team's and Amateur Radio's "face" to the general public. Choose your Contact Person with care. Many teams choose to have their Contact Person also be their liaison with the ARRL/VEC ("Team Liaison").

When you register your session with the ARRL/VEC, we immediately enter the information into our computer data base so that candidates who check our exam search page on the ARRL website or who call our office will get the most current test session information available. Your Contact Person's name and phone number will be given in response to inquiries from candidates in your area. An attractive feature of the job is that it allows the Contact Person to be knowledgeable about examining without having to be a VE!
Soon after a VE team registers a session (about 15 days before the day of the examination) the VEC office will send out the package of materials that the team will need to get its session going (during busier times, the lead time may be shorter). The materials include NCVEC 605 forms, candidate rosters, "confirmation-of-appointment" letters (if necessary), registration forms for future

sessions, the written test booklets, answer sheets, answer keys, Morse code tapes (if needed), Morse code copy sheets, computer software, postage-paid mailers and other items. Although the quantities of the materials included in the package are limited, they are usually sufficient to get the team and its session started. When you receive the package from the VEC, open it immediately and inspect the contents to confirm that you have received everything you require for the session.

Administering VEs. As we already said, each team of VEs must have at least three accredited examiners present to administer exams. When setting up your team, don't forget that all three must hold the Extra Class ticket if Elements 1, 2, 3 and 4 will be administered at the

Clear DayMy understanding is-- there is a difference in "VE Team Liaison" and a "VE Team Contact Person." Many times however, they are combined into one person. There are occasions when these two positions could be separated.

However, the "VE Team Liaison" must be accredited as a Volunteer Examiner, according to ARRL VE Examiner Manual. The "Liaison" is the person to whom all testing materials will be sent. I believe this to be correct, unless this requirement has changed.

I was a VE Team Liaison and VE Team Contact Person for many years, holding an Extra Class Amateur Radio license. My team provided testing for many in the Temple area.

Respectfully,

Charlie, N5TD

Steve you are a part of the Expo Team. Expo is a TARC function. Because
of this
any participation by any club member is a contribution to the success
of Ham Expo.
It doesn't matter if the time volunteered was one hour or twenty hours.
The persons
who serve in the "leadership" type positions would accomplish nothing
if the TARC
membership didn't step up, volunteer and make Ham Expo the success it
is.

The above is a short url to the picture album I just put up. This time I tried to capture a sense of what goes on in the wee hours of Saturday morning. A lot of preparation happens the Friday before, but I caught that I think with the last Expo picture album. Someone wanted a CD of the images I have, but I forgot who - was that you? I'm also sorry if you were one of the many volunteers who made this event a success and I did not capture you in action. I particularly enjoyed the moonbounce demo - it makes me want to get back on. Anyone have a 12 foot or great dish lying around? Or know of one?

TARC
Just want to jump in here and echo Myrons words... A big thanks to everyone who could help out. TARC is at is best when we are all working together and pumping on all cylinders and I think that what happened this weekend. Thanks to all and, John the pictures are great!

Wish ol' Kennedy were around to enjoy the sights and sounds and maybe swat some flies (inside joke lol). He just needs to get home safe, there will be plenty more great HamExpos!

Steve you are a part of the Expo Team. Expo is a TARC function. Because of this
any participation by any club member is a contribution to the success of Ham Expo.
It doesn't matter if the time volunteered was one hour or twenty hours. The persons
who serve in the "leadership" type positions would accomplish nothing if the TARC
membership didn't step up, volunteer and make Ham Expo the success it is.

2651. Monthly Straight Key Operating Event

Yahoo group: Temple_ARC
Date: 2006-10-09 14:22:39 UTC
From: ke5c
Topic: 2651 Message: 2651

If you want to dust off that old straight key for a few hours, the Straight Key Century Club:

http://groups.yahoo.com/group/skcc/

holds a two hour operating event, the Straight Key Sprint, from 0000-0200Z the second Wednesday of each month. That means the next running is tomorrow (Tuesday) evening from 7 to 9 PM CDT time. Although loosely referred to as a contest, this is an operating event. You don't have to be a member to participate, but joining is free and easy - see the Yahoo group above. For more information on the Sprint itself, see:

http://tinyurl.com/ewgfz

The first half hour or so you will find some activity on 20 meters. For the entire two hours, you will find activity on 40 meters with some on 80 meters the last half-hour or hour.

These folks should be pretty workable from 5-land.

Raoul, Island. Kermadecs
Date: 10 October 2006

The Microlite Penguins DXpedition team is now active from Raoul Island in the Kermadecs using the callsign ZL8R. Activity will last for about 8 or 9 days, and will cover as many bands and modes as possible.

The expedition team is: EI6FR, HB9ASZ, K9ZO, N6MZ, N0TT, VK6DXI, W7EW and 9V1YC

QSL manager is VE3XN.

Many thanks to Icom America for sponsoring six IC-7000's for this DXpedition. Thanks also to the New Zealand Department of Conservation (DoC) and the crew of the R/V Braveheart.

The DXpedition team would also like to say thanks in advance to all those individuals and clubs who send in donations with their QSL's. Your generous and continued support of expeditions like this helps keep the magic of DX alive.

73, and good luck in the pileups.

The Microlite Penguins DXpedition Team

From: Ed Underwood
Topic: 2655 Message: 2655

TARC,

This is some further information on our JOTA Ham Radio demonstration set to start at 4 PM one week from tomorrow, Saturday, Oct 21

at Camp Live Oak in Copperas Cove City Park. To get there take HWY 190 west through Killeen into Copperas Cove. Take a right onto

East Ave. D/FM 1113. Go a little less than 1 mile. Turn right onto S 1st Street/FM1113, and go about 2 blocks. Then turn left onto FM 1113

which is also W Ave. B. Continue in a north-westerly direction on 1113 for about 1 mile, and turn right into City Park. Then drive through

the park to the back to get to the camp ground. It is located beside a soccer field. There is a sign leaning on the ground next

to a building that says Camp Live Oak. The camp is fenced in.

From north of Cove, come south on 116, which becomes 1st Street, then turn right on W Ave B / 1113.

We have use of a campground building that has tables and outlets. In front of the building is the highest place in the area and is clear of trees.

Please let me know what you plan to do for JOTA.

Thanks,

Ed W5LQ

2657. 900-MHz Radio System

Yahoo group: Temple_ARC
Date: 2006-10-14 15:51:05 UTC
From: Charlie Schlieper
Topic: 2657 Message: 2657
Attachments: 1 described; binary payloads are missing from this source WARC

Here is a picture of a MaxTrak 900 radio. I've installed two 10-element Yagi antennas, phased together, which are fed with 50-ft of low-loss RG-8 coax, using N-connectors. I added a relatively low-noise muffin fan, with an in-line zip-cord switch for cooling if needed. Thanks to suggestions from Steve Bosshard, NU5D, I was able to modify the time-progressive decrease in power-module control voltage, by adding a heat-sinked 7808 (8-volt) voltage regulator IC, and using one series diode on it's output to lower the control voltage close to 7-volts. This stabilized the unit at a continous output power of 13-watts. Steve has been working very hard to refine the operation of the 902.500/927.500 MHz repeater, and reportedly has more 900-MHz radio units on the way.

Enjoy Ham Radio!

Technician Test Session in Cameron

04-Nov-2006
Sponsor: BELL COUNTY ARES
Time: 9:00 AM (Walk-ins allowed)
Contact: FRANK STEWART
(254)605-0678
VEC: ARRL/VEC
Location: MILAM COUNTY COURT HOUSE
102 S FANNIN AVE
CAMERON, TX 76520

We have registered an ARRL VE test session in Cameron at the Milam County Court House on 4 November at 9:00 o'clock.

Only Technician and Code tests will be offered at this session.

Walk-ins are welcome

Photo ID's are required and a fee of $14.00 will be in effect

Please advise anyone wishing to test

We could use some more ARRL VE's for the session

We are ready to schedule other test sessions in the seven county CTTC area (Bell, Coryell, Falls, Hamilton, Lampasas, Milam and Mills.)

For more information or to schedule a test session, contact:

Gerald Richmond, N5ZXJ, (254) 913-7041

or Joe Dorn, W5VEX, (254) 939-5918

2671. 900-MHz J-Pole Antenna

Yahoo group: Temple_ARC
Date: 2006-10-17 03:51:18 UTC
From: Charlie Schlieper
Topic: 2671 Message: 2671
Attachments: 1 described; binary payloads are missing from this source WARC

This is a simple 900-MHz J-Pole antenna that I built tonight. The SWR is 1:1 using a short piece of Mini RG-8X coax. The long j-pole dimension is 9.4 inches, and the short stub is 3.1875 (3-3/16) inches. It is matched 0.4 inches from bottom of the junction. The separation between the stub and the long section is 0.3125 inches (5/16 inch). The bottom copper section is 1-inch in diameter, and reduced to 3/8-inch for the antenna.

Enjoy Ham Radio!

From: WR1TX
Topic: 2678 Message: 2679

This was a storm worthy of having those warnings put out, but it could have been worse.

The storm mentioned had been noted as tornadic earlier in the afternoon as it rolled through Mason, Llano, and Burnet counties. Not long before the storm moved into Bell County, the cold front that was responsible for the current cooler weather in place sliced through. The severe thunderstorm then moved into the cooler air behind the front; the drier and cooler air took away much of the fuel that was needed for large hail and possible tornadic activity.

Had the front moved in maybe 3 hours later, we would have had a significant weather event. All other components were in place for such an event.

Blank
QST. QST. QST.

This is an announcement about upcoming Amateur Radio test sessions in the Central Texas area

On Saturday, November 4th a test session will be held at the Milam County Courthouse in Cameron starting at 9:00 AM.

Only Technician and Code tests will be offered at the Cameron session.

The Milam County Courthouse is located at 102 South Fannin Street in Cameron.

Additional information is available from:

Frank Stewart, KD5WRO, telephone: 254 605 0678

****

On Saturday, November 18th, a test session will be held at the Bell County Courthouse in Belton starting at 9:00 AM.

All levels will be offered at the Belton session

The Bell County Courthouse is located at Main and Central in Belton

Additional information can is available from Joe Dorn, W5VEX, telephone: 254 939 5918

****

An original photo ID is required for all participants at all test sessions.

If you have credit for previous tests, then the originals and two copies of your previous licenses or credits for tests taken must be presented.

****

Additional testing will be offered on a regular basis starting in January 2007. We will also give tests by request in the Central Texas area.

For additional information contact:

Joe Dorn, W5VEX, at 254 939 5918

Or

Gerald Richmond, N5ZXJ, at 254 913 7041

We encourage any group that wishes to make additional test announcements on this repeater to send information to W5VEX@... or N5ZXJ@...

All Volunteer Examiners are invited to participate

This announcement will be repeated periodically

Clear Day
TARC,

This is some further information on our JOTA Ham Radio demonstration set to start at 4 PM tomorrow, Saturday, Oct 21

at Camp Live Oak in Copperas Cove City Park. To get there take HWY 190 west through Killeen into Copperas Cove. Take a right onto East Ave. D/FM 1113. Go a little less than 1 mile. Turn right onto S 1st Street/FM1113, and go about 2 blocks. Then turn left onto FM 1113 which is also W Ave. B. Continue in a north-westerly direction on 1113 for about 1 mile, and turn right into City Park. Then drive through the park to the back to get to the camp ground. It is located beside a soccer field. There is a sign leaning on the ground next to a building that says Camp Live Oak. The camp is fenced in.

From north of Cove, come south on 116, which becomes 1st Street, then turn right on W Ave B / 1113.

We have use of a campground building that has tables and outlets. In front of the building is the highest place in the area and is clear of trees.

Please let me know what you plan to do for JOTA.

Thanks,

Ed W5LQ

Clear DayAll,
The Austin Amateur Radio Club's Swapmeet is rapidly approaching!
Nov 3rd (Dinner Party) and 4th (Swapfest).

An update- We are proud to announce our commercial vendors:

Austin Amateur Radio Supply- Johnny WA5BGO and Grace Paul
http://www.aaradio.com/

Jubilee Enterprises- Mike Williams KK5SC
http://www.shopjubilee.com/

Bob-and-Linda Amateur Accessories- Bob Elder N7WWK
http://n7wwk.com/store//catalog/

Note the same location as 2005- VFW Post 8787 Hall #3.
Lat- -97.66972 (-97 40.183)
Lon- 30.39406 (30 23.644)

Southbound on I-35:
Take Braker exit 243 (be careful, it's in middle of construction) and
make 180 at Braker, crossing over I-35. Proceed on north I-35 access
road to VFW road (look for the "VFW 8787" arrow on the billboard) and
make a right.

Northbound on I-35:
Take Braker exit 243 or Yager exit 244 and proceed on north I-35 access
road to VFW road (look for the "VFW 8787" arrow on the billboard) and
make a right.

Tables are limited this year, as hall #2 will be in use.
We will give a price break if you bring you own table(s) or simply need
floor space.

Talkin will be on 146.94(-) b/u 147.36(+)131.8

Please RSVP if you will be attending the dinner before prices go up Oct
27!

See the weekly SwapNet newsletter seen at:
http://www.austinhams.org/swapnet.htm

Thanks,
Jeff N5MNW AARC President

4th Annual AARC hosted Swapmeet- Austin (Amateur) Radio RoundUp!
www.AustinHams.org

Nov 4 (Sat.) VFW Post 8787 N of Braker on I35 N frontage Setup 7AM, doors open 8AM til noon (grand prize drawing)

$1 admission- gets one raffle ticket, Additional tickets are $1 each or 6 for $5.

Tables- $10 (no elx), $15 (w/elx). Commercial Vendors can set up as early as Friday 4-6 PM.

TCARES talk- in on 146.94

Large Main Hall #3 (80'x66') is well-ventilated (no stale smoke smell). Main Hall #3 will be a No-Smoking area for the entire Fri-Sat event.

Saturday Grand Prize Drawing at High Noon! Need not be present to win.

Outside tailgaters' parking lot for cheap and early outdoor swapping.

30-40 RV spaces directly behind Hall. $5 to hook up, $5 to dump. Please call VFW Hall 836-8767 to reserve for RV or ask RV-related questions.

Texas State Guard Commo Unit and LCRA Communications Trailer will be on display!

Nov 3 Friday AARC Chili Cookoff and Ice Cream Social:

6PM-9PM $10/ea- $18/couple before Oct 27, $15 each after Oct 27 and at door-
includes two-day admission and six raffle tickets each.

Bring a gallon of Chili and be entered in the Chili Cookoff! Cash Prizes Awarded!

For Swapfest/Dinner reservations, contact Lori KM5MQ@...
512-255-6753 or sign up and pay with PayPal on the website!

2688. 6 Meters

Yahoo group: Temple_ARC
Date: 2006-10-21 04:07:32 UTC
From: WR1TX
Topic: 2688 Message: 2688

I am now capable of working 6 meters fairly regularly now. Thanks to a 20 meter HF loop antenna up at 25 feet at the feedpoint, I can tune it for 6 meters with an SWR of 1:1 from 50.005 MHz to 1.5:1 at 53.250 MHz at 100 watts output with no glitches. Ladderline is run from the HF loop through my MFJ-949E with the setting at Bypass (for ladderline). Then, I have a short jumper to a two-position switch that allows me to switch between HF and 50 MHz.

When I switch to the HF setting, I then switch my MFJ-949E back to the Tuned setting for ladderline and tune accordingly. When I want to operate on 6 meters, I go back to the Bypass setting on my MFJ-949E and then switch settings on my 2-position switch to 6 meters, then tune using my MFJ-906 6 meter tuner.

The SWR finally reaches 2:1 at 23.550 MHz with 100 watts output, but I certainly don't plan to run that high in frequency; I'll operate below 53 Mhz about 95% of the time.

The settings are a little bit cumbersome, but it works! I do plan to build a 6-meter triangular loop antenna soon; this loop will be set up at the same angle as my HF loop (about a 45 degree angle). I will then be able to take the 2-position switch completely offline along with the extra jumpers I'm using now. I had thought about a 6 meter quad or Yagi, but decided to just try a loop instead. I think it'll work!

2692. 73 vs 73's

Yahoo group: Temple_ARC
Date: 2006-10-21 17:37:24 UTC
From: ke5c
Topic: 2692 Message: 2692

I'm not sure the 73 vs 73's discussion has ever made it to this group, but it's floating around the skcc group in a humorous way. For those who haven't run across this, from time to time some op gets bent all out of shape if you sign "73's" instead of "73". Well, as it turns out, the "73's" have a pretty good argument:

http://www.lacrossehams.org/73s.html

73/73's, John

I've seen the discussions on the SKCC reflector, but now I have to admit that the "73's" do have a good argument...because of The Old Man himself!

Now what in the heck do I use...73 or 73's????? I guess it doesn't matter.

The discussions about 73 versus 73's have been around since bakelite. Hiram Percy Maxim 1AW was an engineering genious and most assuredly the father of amateur radio in the U.S. Did he also have a degree in English grammar and punctuation? A point to ponder.

From: GORDON BLAND
Topic: 2692 Message: 2695

Why are you called a HAM / HAM's ? A little off of the subject of 73 / 73's.... See below....

From Florida Skip Magazine - 1959

Have you ever wondered why radio amateurs are called "HAMS"? Well, it goes like this: The word "HAM" as applied to 1908 was the station call of the first amateur wireless stations operated by some amateurs of the Harvard Radio Club. They were ALBERT S. HYMAN, BOB ALMY, and POOGIE MURRAY. At first they called their station"HYMAN-ALMY-MURRAY". Tapping out such a long name in code soon became tiresome and called for a revision.They changed it to "HYALMU", using the first two letters of each of their names. Early in 1910 some confusion resulted between signals from the amateur wireless station "HYALMU" and a Mexican ship named "HYALMO". They decided to use only the first letter of each name, and the station call became "HAM".

In the early pioneer days of unregulated radio, amateur operators picked their own frequency and call letters. Then, as now, some amateurs had better signals than commercial stations. The resulting interference came to the attention of congressional committees in Washington and Congress gave much time to proposed legislation designed to critically limit amateur radio activity.

In 1911, Albert Hyman chose the controversial WIRELESS REGULATION BILL as the topic for his thesis at Harvard. His instructor insisted that a copy be sent to Senator David I. Walsh, a member of the committee hearing the bill. The Senator was so impressed with the thesis that he asked Hyman to appear before the committee. Albert Hyman took the stand and described how the little station was built and almost cried when he told the crowded committee room that if the bill went through, they would have to close down the station because they could not afford the license fees and all the other requirements which the bill imposed on amateur stations.

Congressional debate began on the WIRELESS REGULATION BILL and the little station "HAM" became the symbol for all the little amateur stations in the country crying to be saved from the menace and greed of the big commercial stations who didn't want them around. The bill finally got to the floor of Congress and every speaker talked about the"...poor little station HAM". That's how it all started.

You will find the whole story in the Congressional Record. Nationwide publicity associated station "HAM" with amateur radio operators. From that day to this, and probably to the end of time in radio, an amateur is a "HAM

I'm trying to stick a 40/80 vertical in my back yard and not up into any trees. As it turns out, I'll have a distorted radial pattern weak to the west, but who cares. North, south and most of east will have good radials. The reason west won't is that is where my house is parked. Not only that, but the shack is on the second floor, and the operating postion will be about 15 feet away from the best location for the vertical. If I wanted it more messed up, I'd be hard pressed to do so. I don't really care if the pattern is skewed away from the west, but I am wonder what will happen if I push a kilowatt of RF into it with my rig and computer about 15 feet away. Has anyone here ever done something so ridiculous, and what happened? Thank you! -73, John

thanks to martha, tom, and charlie - i've put up the rest of the pix.

http://www.tarc.org/ - select "Gallery" from the left navigation panel
and click on the JOTA album to view.

73, john

I don't think you'll need any power for any fluorescent bulbs in your house.

2719. Electronic Grade RTV

Yahoo group: Temple_ARC
Date: 2006-10-24 11:24:02 UTC
From: Charlie Schlieper
Topic: 2719 Message: 2719

Does anyone in the Central Texas area happen to know
where electronic grade RTV can be purchased locally?

I was originally looking for GE's brand "TSE399C" (clear)
but could settle for TSE397C, or perhaps other numbers,
like RTV133, (RTV160 & RTV162 are both white), RTV167
is gray. I'm not sure what color GC's 19-155 is. I wanted
a good electronic grade of CLEAR RTV to stock.

I may have to just order some from some place like MG
Chemical, Allied, or other mail order sources, but I thought
it would be available locally. I already tried L&M Electronics.
Any ideas?

Tnx,
---Charlie

Charlie, how about an ATV? I don't know about "electronic grade" but I've seen them jump great distances on TV.

2725. FM Narrow, Wide, UltraWide, and Splinter

Yahoo group: Temple_ARC
Date: 2006-10-27 19:09:06 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 2725 Message: 2725
Attachments: 1 described; binary payloads are missing from this source WARC

Back when I started servicing FM business and public safety radio in the early 70's it was pretty straight forward. EVERYTHING in FM 2-Way was either 20K0F3E or 16K0F3E as an emission designator. You technician and general hams will remember 3A3J as one of the exam questions on your ham license exam - right next to Colpits and Hartley stuff.

At the time there was still some wideband stuff floating around. In 1972 Wide Band FM meant +/- 15 Khz (was KC at that time - hertz became common later) Instantanious Transmitter Deviation (IDC for Instantanious Deviation Control). The 16K and 20K used +/- 5 Khz IDC while the 40K stuff used +/- 15Khz IDC.

In the late 50's early 60's the FCC realized that spectrum was becoming crowded with taxicab, business and public safety, so the FCC decided to split channels. That meant to make 2, 20 Khz channels out of each 40 Khz channel.

BTW, the reason behind the 40 Khz channel was that +/- 15 Khz deviation with 3 Khz maximum audio frequency according to Carson's Rule, http://www.fmsystems-inc.com/eng_fm.htm , occupied bandwidth is twice the transmitter deviation (30 Khz) plus the highest audio frequency (3 Khz) for 33 Khz. The remainder provided a gaurd band between radio channels because selectivity even with a PermaKay filter was not that great.

Well with Split Channel brand new radios could not be used, so Motorola, GE, RCA and Aerotron (the big 4 radio manufacturers at the time) developed retrofit kits and each radio was modified and re-labeled with a new FCC Authorization Number. At the time each licensee was required to conduct an annual inspection by a FCC Licensed (First or Second Class Radio Telephone or Radio Telegraph operators license - now GROL for General Radio Operator License) technician. The technician filled out a proof of performance certificate signed and including his license number.

Well everything went well for years, and then in the late 90's the FCC again saw a need for more spectrum and instead of calling it splitting channels, called it REFARMING. Now there are many different types of emissions and bandwidths being offered. See http://www.apcointl.org/frequency/emission.html .

Our new 927.5000 Mhz repeater is a 12.5 Khz channel repeater using +/- 2.5 Khz transmitter deviation.

This information was prompted by a call today from a ham asking if a particular commercial radio would work on public safety channels. My response was that I needed to know what public safety channels the user was licensed to operate on. The user, a ham, did not have a clue about emission designators or occupied bandwidth and thought it meant that the radio would operate from 136 Mhz to 174 Mhz. I tried to get him to give me the call signs of the stations he wanted to operate on so I could look up the licenses on www.fcc.gov/wtb and search the data bases, but he got mad and told me he would call someone else.

Anyhow to make things more interesting, there is channel spacing as well as occupied band width. The lowest common denominator for channel spacing is 2.5 Khz. Conceivably there

could be a different radio channel every 2.5 Khz up and down the band. There are still many wideband licensees as well as narrow band licenses, so just because the radio will tune in 2.5 Khz steps does not mean that you can fit a 20 Khz transmitter into a 10 Khz licensed frequency without interfering with the folks on adjacent channels.

Some radios manufactured in the interim between wide and narrow type acceptance would operate on 11K0F3E narrow channels but only in 15 Khz increments. This meant that every 5th radio channel would be on frequency, and the others would be off frequency by 6.25 Khz up or down. A good example of this is Moody fire department with a 15 Khz spaced channel that is licensed for 12.5 Khz bandwidth. So just because the channel does not end in 0.0625 does not mean it is wide. Also there are several 6.25 Khz channels licensed in the area for telemetry operations.

SO, unless you are familiar with the license of the entity whose radio system you are attempting to operate, you cannot be sure whether a radio will work properly or not. Also even with the model number of the radio you are wanting to use, there were many interim variations that may or may not work on a particular channel. The trend is for public safety to move to narrow (11K) channels and Project 25 digital (another complete different facet) modulation.

Oh, Ultrawide refers to unlicensed operation where channels are purposely made to be ultrawide so that the power distribution in a particular channel is negligible and will not cause harmful interference, and splinter channels refered to once narrow channels between standard 25 Khz channels with 2 Watt, 20 Ft antenna rules allowing on campus or very localized coverage with very simple license and coordination efforts.

I hope this clarifies some issues about bandwidth and channel spacing.

Steve, NU5D, CET TX 495, PG10-8779 Lifetime GROL.

An excellent post, Steve. That information cleared up some questions I had; I understand everything better now!

I guess the guy who wanted that information from you, but got mad and left, just simply didn't understand why you asked the questions you did. Maybe he just didn't understand what he was asking himself; who knows?

But no matter. Thanks for providing such useful information; I appreciate it!

2727. 6 meter band

Yahoo group: Temple_ARC
Date: 2006-10-27 19:28:31 UTC
From: Aaron
Topic: 2727 Message: 2727

I am going to Waco in the morning to test for my Tech ticket. I'm not ready to take code test yet but so far I find it quite interesting to learn. I have a question and a problem and hope someone can help answer it. I can not hear any QSO's on 6 meters using a Crushcraft AR6 Ringo. I heard that 6 meter is pretty quite. I have been looking for about two weeks now and have heard no code or voices. I did not think it would be that quite. I can hear QSO's on HF with my Titan Gap and can hear everyone around here on 2 meter and 70cm with my dual band antenna (Forgot the brand. The only thing I can find is that when you check the connector of the 6 meter band at the radio with a meter it shows continuety from the center pen to the sleeve. The way the antenna is made I think it's supposed to be this way. Any one have any ideas?

Thanks,
Aaron

I check all bands daily, usually around 10 AM. We are at thje bottom of the sunspot cycle now or close to it, supposed to bottom out next year, then start going up again. At the bottom of the sunspot cycle, the higher bands are mostly dead. I haven't found 6 meters open at all lately, but on a couple of days have heard activity on 10, 12 and better on 15. 17 is open most days with plenty of DX to be found there. Last Friday all bands were wide open it seemed. I was on HF from 11AM till about 6PM and worked over 25 countries in one day. I have an Icom IC-716 that I recently bought off eBay. It cover 160-10 plus WARC bands and 6 meters with 100W out on all bands. My antenna is a G5RV wire Inverted V at 45 feet.

Hello Pete,

There are several folks around Temple / Belton, etc that get on 50.125 and 52.525 FM. I have not heard anything in a while other that some local folks and a few down around Wimberly and DFW area.
http://dxworld.com/50prop.html and http://k1six.com/50dx_frames.html

are good spotting sites for 6m activity. 15 and 17 were open during JOTA last Saturday and have made some DX contacts into Europe, Croatia and Italy on 17 recently.

gud dx es 73 de nu5d

Maybe the CQ Magazine Worldwide DX Contest (SSB) this weekend will help curb the desire for DX! I'll be looking for a few new countries, or at least new band-countries, or prefixes, grid squares, or whatever.

I've monitored 6 a bit lately, and yes there has been little to no activity. But NU5D, N5TD, K5KEV, and myself have had a few local chats the last few days on 50.125 USB. If nothing else, a local ragchew or two is always good!

See you on the bands...

17 is my favorite band these days. I've also worked Croatia there and several Italy stations along with Slovenia, Lebanon, Norfolk Island, Portugal, Belize, Martinique, Spain, England, N. Ireland, France, and Germany and more. Costa Rica and Cuba are on daily. I finally was successful in getting a 59 from the dxpedition XF4DL , Soccorro Island, yesterday on 17. I had tried before, but the pileups were way too big. Toughing it out with a wire antenna and no amp.

I still check 6 and 10 in the mornings to check propagation. One of these days, I'll get surprised...

Hello Pete,

There are several folks around Temple / Belton, etc that get on 50.125 and 52.525 FM. I have not heard anything in a while other that some local folks and a few down around Wimberly and DFW area.
http://dxworld.com/50prop.html and http://k1six.com/50dx_frames.html

are good spotting sites for 6m activity. 15 and 17 were open during JOTA last Saturday and have made some DX contacts into Europe, Croatia and Italy on 17 recently.

> I check all bands daily, usually around 10 AM. We are at thje bottom of the sunspot cycle now or close to it, supposed to bottom out next year, then start going up again. At the bottom of the sunspot cycle, the higher bands are mostly dead. I haven't found 6 meters open at all lately, but on a couple of days have heard activity on 10, 12 and better on 15. 17 is open most days with plenty of DX to be found there. Last Friday all bands were wide open it seemed. I was on HF from 11AM till about 6PM and worked over 25 countries in one day. I have an Icom IC-716 that I recently bought off eBay. It cover 160-10 plus WARC bands and 6 meters with 100W out on all bands. My antenna is a G5RV wire Inverted V at 45 feet.

good luck!

> I heard that 6 meter is pretty quite.

you mean quiet, and you've got that right! this time of the solar cycle, openings are rare, and unless there is an opening, you won't find anything on. it's not a very populated band because it used to require an additional radio and still does require an additional antenna. with many new rigs including six meters, activity may increase in the future, but you'll still likely need an open band.

Subject: [Temple_ARC] FM Narrow, Wide, UltraWide, and Splinter

Back when I started servicing FM business and public safety radio in the early 70's it was pretty straight forward. EVERYTHING in FM 2-Way was either 20K0F3E or 16K0F3E as an emission designator. You technician and general hams will remember 3A3J as one of the exam questions on your ham license exam - right next to Colpits and Hartley stuff.

At the time there was still some wideband stuff floating around. In 1972 Wide Band FM meant +/- 15 Khz (was KC at that time - hertz became common later) Instantanious Transmitter Deviation (IDC for Instantanious Deviation Control). The 16K and 20K used +/- 5 Khz IDC while the 40K stuff used +/- 15Khz IDC.

In the late 50's early 60's the FCC realized that spectrum was becoming crowded with taxicab, business and public safety, so the FCC decided to split channels. That meant to make 2, 20 Khz channels out of each 40 Khz channel.

BTW, the reason behind the 40 Khz channel was that +/- 15 Khz deviation with 3 Khz maximum audio frequency according to Carson's Rule, http://www.fmsystems-inc.com/eng_fm.htm , occupied bandwidth is twice the transmitter deviation (30 Khz) plus the highest audio frequency (3 Khz) for 33 Khz. The remainder provided a gaurd band between radio channels because selectivity even with a PermaKay filter was not that great.

Well with Split Channel brand new radios could not be used, so Motorola, GE, RCA and Aerotron (the big 4 radio manufacturers at the time) developed retrofit kits and each radio was modified and re-labeled with a new FCC Authorization Number. At the time each licensee was required to conduct an annual inspection by a FCC Licensed (First or Second Class Radio Telephone or Radio Telegraph operators license - now GROL for General Radio Operator License) technician. The technician filled out a proof of performance certificate signed and including his license number.

Well everything went well for years, and then in the late 90's the FCC again saw a need for more spectrum and instead of calling it splitting channels, called it REFARMING. Now there are many different types of emissions and bandwidths being offered. See http://www.apcointl.org/frequency/emission.html .

Our new 927.5000 Mhz repeater is a 12.5 Khz channel repeater using +/- 2.5 Khz transmitter deviation.

This information was prompted by a call today from a ham asking if a particular commercial radio would work on public safety channels. My response was that I needed to know what

public safety channels the user was licensed to operate on. The user, a ham, did not have a clue about emission designators or occupied bandwidth and thought it meant that the radio would operate from 136 Mhz to 174 Mhz. I tried to get him to give me the call signs of the stations he wanted to operate on so I could look up the licenses on www.fcc.gov/wtb and search the data bases, but he got mad and told me he would call someone else.

Anyhow to make things more interesting, there is channel spacing as well as occupied band width. The lowest common denominator for channel spacing is 2.5 Khz. Conceivably there could be a different radio channel every 2.5 Khz up and down the band. There are still many wideband licensees as well as narrow band licenses, so just because the radio will tune in 2.5 Khz steps does not mean that you can fit a 20 Khz transmitter into a 10 Khz licensed frequency without interfering with the folks on adjacent channels.

Some radios manufactured in the interim between wide and narrow type acceptance would operate on 11K0F3E narrow channels but only in 15 Khz increments. This meant that every 5th radio channel would be on frequency, and the others would be off frequency by 6.25 Khz up or down. A good example of this is Moody fire department with a 15 Khz spaced channel that is licensed for 12.5 Khz bandwidth. So just because the channel does not end in 0.0625 does not mean it is wide. Also there are several 6.25 Khz channels licensed in the area for telemetry operations.

SO, unless you are familiar with the license of the entity whose radio system you are attempting to operate, you cannot be sure whether a radio will work properly or not. Also even with the model number of the radio you are wanting to use, there were many interim variations that may or may not work on a particular channel. The trend is for public safety to move to narrow (11K) channels and Project 25 digital (another complete different facet) modulation.

Oh, Ultrawide refers to unlicensed operation where channels are purposely made to be ultrawide so that the power distribution in a particular channel is negligible and will not cause harmful interference, and splinter channels refered to once narrow channels between standard 25 Khz channels with 2 Watt, 20 Ft antenna rules allowing on campus or very localized coverage with very simple license and coordination efforts.

I hope this clarifies some issues about bandwidth and channel spacing.

I built a 5/8-wavelength vertical antenna for 6-meters for a project today. I used old telescoping parts left over from the past, to fabricate the antenna. The overall length was about 152-inches, which is foreshortened some to compensate for "wire-cone" loading at the top. A design by Mike, G3JVL, specified 155-inches for this antenna. The matching coil (at the bottom) was 10-turns of #12 gauge copper wire, tapped about 4-3/4 turns from the bottom. Three 49.5 inch radials were fabricated out of 1/8-inch round solid aluminum stock, and attached with a 1-1/4 inch hose clamp. The SWR was 1:1 @ 50.200 MHz, and less than 1.5:1 at 51 MHz. For the coil insulator form, I used a tightly fitting section of round wooden dowel, coated to seal the surface from moisture. A 5/8-wavelength vertical is about 3.0 dB gain over a 1/4-wave antenna. Antennas are fun to build and experiment with, and this weekend was perfect weather for it. Oh, did I forget to mention that I had a good helper? ---Thanks Kay, KB5DC!

Enjoy Ham Radio!

Here's a quick look at the matching coil that I used for the 5/8-wavelength 6m vertical antenna. The wire size isn't critical. I cleaned the copper wire with fine-grade of steel wool before wrapping the turns on the form. Some slight tap adjustment may be required on a given antenna, but an SWR of 1:1 was achieved on this one, at a frequency of 52.200 MHz with the tap shown below. (The design is credited to Mike, G3JVL, using an antenna length of 155 inches, and 42.2 inch radials.) 73, Charlie, N5TD.

Subject: [Temple_ARC] 6m 5/8-wave Vertical Ant

I built a 5/8-wavelength vertical antenna for 6-meters for a project today. I used old telescoping parts left over from the past, to fabricate the antenna. The overall length was about 152-inches, which is foreshortened some to compensate for "wire-cone" loading at the top. A design by Mike, G3JVL, specified 155-inches for this antenna. The matching coil (at the bottom) was 10-turns of #12 gauge copper wire, tapped about 4-3/4 turns from the bottom. Three 49.5 inch radials were fabricated out of 1/8-inch round solid aluminum stock, and attached with a 1-1/4 inch hose clamp. The SWR was 1:1 @ 50.200 MHz, and less than 1.5:1 at 51 MHz. For the coil insulator form, I used a tightly fitting section of round wooden dowel, coated to seal the surface from moisture. A 5/8-wavelength vertical is about 3.0 dB gain over a 1/4-wave antenna. Antennas are fun to build and experiment with, and this weekend was perfect weather for it. Oh, did I forget to mention that I had a good helper? ---Thanks Kay, KB5DC!

Enjoy Ham Radio!

The big question is;
How do you get Kay to stand there and hold the antenna during thunder storms?

2754. MixW2.17 Nov 1, 2006 Update

Yahoo group: Temple_ARC
Date: 2006-11-01 13:49:23 UTC
From: Charlie Schlieper
Topic: 2754 Message: 2754

Since MixW is such a popular Digital Mode program to many,
I thought I would echo this announcement of a new UPDATE.
MixW 2.17 (Nov-1-2006) is available for downloading:

http://mixw.net/files/MixW217-Nov-1.exe

What's new? (From: Denis, UU9JDR)

- FT-2000 and FT-9000D support is added
- RigExpert Standard is auto-detected
- Minor bugs fixed

Enjoy Ham Radio!

2755. TARC Elections

2758. Amateur Radio Stamps

Yahoo group: Temple_ARC
Date: 2006-11-02 04:58:23 UTC
From: WR1TX
Topic: 2758 Message: 2758

This might be a bit off-topic for some groups, but here goes:

I've decided to get into a second hobby (Amateur Radio being the first one, naturally): stamp collecting, with a slant toward Amateur Radio postage stamps.

I'm already doing the research on how to handle the stamps, determine the value, looking into supplies...the whole nine yards. My question is this: Who can give me an idea on who has Amateur Radio stamps for sale, whether new or used? Are there any local collectors out there that I can meet with and learn?

Any help out there would be appreciated.

Topic: 2767 Message: 2767

Central Texas will soon have 5 new Technician class hams.
Please welcome them when they get on the air!

Four from Milam County, One from Robertson County passed there
Technician tests.

In all we had seven test today.

Next test session Locally will be in Belton 18 November 2006 at the
Bell County Court house on the Second floor.
All classes licenses will be avaiable for testing on this date.

I would like to have a few more VE's willing to help and be a part
of this session date.
Let me know if you can participate as a VE with us and any other
time we offer a session.

Gerald Richmond

Oh John John John.....

I'm pretty sure that IF they see it fit to Join the TARC, then they will.. If they don't its not an issue to Central Texas as a whole..

IT IS A HOBBY !!!! WHEN WILL PEOPLE REALIZE THAT FACT???? IT IS A HOBBY !!

Heck, the folks east of us in Bell County & the Temple area may just start thier own club in Cameron, Rockdale, or a Milam County ARC...

They all know about TARC and pretty sure we'll all hear them on the 82 machine along with the other repeaters around Central Texas

2779. Transistors

Yahoo group: Temple_ARC
Date: 2006-11-06 15:32:55 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 2779 Message: 2779
Attachments: 1 described; binary payloads are missing from this source WARC

Harvey in Colorado is having trouble with his Astron RS-35 power supply. Thought I would share basic transistor junction testing with the group.

Hey Harvey, enjoyed the chat on 40M this morning. There are several types of transistors, Bipolar and Field Effect and several more like Unijunction and SCRs and TRIACs

Under Bipolar types as used in pass transistors on the Astron, there are NPN and PNP. NPN (easy way to remember on a schematic as Not Pointing In - where the arrow doesn't point in).

Bipolar transistors have 3 active leads (some metal cased RF transistors also have a 4 leg that is case ground). These leads are Base, Collector and Emitter.

I won't try and explain bias and operation but limit this to just a basic test of the transistor junctions.

I use a Simpson 260 VOM for testing. First thing about an ohm meter is that it is really a current meter and measures current through a device under test. In order to measure current the VOM has to provide a current source, hence batteries in the meter. NEVER HOOK AN OHM METER TO A LIVE CIRCUIT - IT WILL DAMAGE THE METER MOST LIKELY.

The VOM has 2 leads for testing. One will go thru the meter and shunt resistors to the internal battery, the other will go to the other side of the battery. In the Simpson 260 the RED lead happens to be POSITIVE and the BLACK lead happens to be NEGATIVE. This is not always the case.

Anyhow with this out of the way, a bipolar transistor should show open (infinite OHMS) between collector and emitter with positive on the collector OR positive on the emitter.

An NPN transistor like the 2N3055 often used as pass regulators for DC power supplies is tested between BASE and Collector and Emitter as follows.

Apply the Negative lead to the BASE with a clip lead. Set the Meter to R X 10K. With the black lead on the base touch the RED lead to the Collector (Be sure the meter is set to +DC on the -DC/+DC/AC Selector or the reading will be backwards). Negative on the base and positive on the Collector should show OPEN - the needle should not move.

Next leave the black lead on the base and touch the RED lead to the EMITTER. This also should show open.

Finally connect RED to the base and touch the black to the Collector - The meter should read around 1/3 scale. Next leave the RED on the BASE and touch the EMITTER - again the meter should read around 1/3 scale.

IF a junctions reads 1/3 scale or less in both directions the junction is probably shorted, and if the junction shows OPEN both directions it is probably blown open.

I hope this helps you test your power supply Harvey,

73,

Steve NU5D

Subject: Update on Rocky AC5IO

I am feeling pretty good and go home on a pass for 6 hours ,0900 AM till 0500 PM just about everyday. I should get out of the Hospital on the 21st of November, just in time for Thanksgiving. I have two small radios in my room and monitor 146.820 tone 123.0 and 147.260 tone 88.5. I enjoy listening and talking to the Hams daily, sometimes better than the newspaper. An Aux, lady delivers a newspaper to me daily and I have a nice TV. The Nurses and helpers are just wonderful and can't seem to do enough for me. They make me feel at home. This is the Santa Fe Skilled Nursing Facility, a portion of Scott & White Hospital. I understand this used to be an old Railroad hospital and it certainly has a history behind it. The Trains put me to sleep every night. They don't wake me as I used to live in a Railroad depot when I was small(Marion FL. about 1938). Now I can't fine it on the map. I think Jasper, FL engulfed it some years ago.

73's and God Bless

Palmer Davis "Rocky" AC5IO

Hospital phone 254 771 8341/8340, ask for room 338

I am now checking my e-mail daily

From: ke5c
Topic: 2782 Message: 2782

does anyone have a cheap old filament transformer in their "surplus" box?
i'm looking for a 115 v primary with 5 to 7 volt secondary at 10 or so amps.
reply off list if so and thanks!

73, john
